The judging of the heavy and light-weight matured hunters took place in the usual manner on the first day of the show over the course mapped out for them on Lord Tredegar's stud farm at Coedkernew, where the ground was in very good form. There was a large company present, and the proceedings were witnessed with considerable interest although there were but few incidents to carse much excitement. The jumps were pretty stiff, and included water, timber, ordinary and double fences, and banks, but the majority of the animals did well.

Chichester.

The feature of the fat stock show held at Chichester last week was the high-class quality of the stock, and, though the numbers were not quite up to some previous years, it can be safely asserted that the display was the best ever seen here. The cattle entries showed the greatest falling off in numbers, this being due to the show clashing with that at Horsham, but, as already stated, the quality was excellent. The honour of taking the champion prize for the best beast fell to Mr. R. L. Batchelor, of Greatham, Pulborough, who obtained the distinction with an Aberdeen-Angus heifer, two years eleven months and two weeks old, bred by the exhibitor—a beautifully shaped animal, which was fifteen to twenty stone heavier than it looked, even in the eyes of an expert. The sheep numbered only one pen short of last year, and the quality was unusually high. For the fourth year in succession the Duke of Richmond and Gordon was awarded the special prize for the best pen in the show—a pen of three fat wether sheep about 21 months old, which reached the height of perfection.

The show of lambs was a fairly large one, and here, too, the competition was very keen and of high order. Mrs. Montefiore, of Crawley, secured the premier awards for both kinds of wether lambs, with splendid pens. There were rather more pigs than last year, but all the prizes in this section went to Mr. W. M. Christy, of Watergate, who made a clean sweep of the board. An increase was also to be noted in the roots, a feature of which were the very large yellow globe and golden tankard mangold wurzel. The poultry and corn classes were also well maintained, although the entries for the former numbered rather fewer than last year.

Chippenham.

The seventieth annual show at Chippenham took place in the Market Yard last week. The number of entries showed a slight falling off compared with last year, but the numbers in the cattle classes were above the average. The classes for young stock were unusually well represented, and included Bapton Viceroy, for which Mr. Willis the previous day refused 1,000 gs. There was practically no competition in the sheep classes; and the pig classes, with the exception of that for pairs of bacon pigs, were weak. There were, however, some very promising young animals shown in the horse classes.

Ripon Martinmas Fair was held on Thursday, when there was a large show of bullocks and stirks, as well as heifers and calving cows, but very little trade was done, buyers being scarce, and there being an unwillingness to do business at prices quoted. Two-year-old bullocks, £9; one-and-a-half-years ditto, £7; stirks, £5 10s.; heifers according to age and quality, £7 to £10; calving and milking cows, £16 to £19.

Louth Fair was held on Thursday, and was well attended. There was only a small supply of store stock, which met a slow trade. Drapes, £10 to £13; young drapes, £14; dairy cows, £18 to £24; heifers, £17 to £18; and two-year-old steers, £14. Messrs. Dickinson, Riggall, and Davy sold by auction 20 steer calves for Mr. H. Whitworth, Oxcombe, which averaged £7 7s., the top price being £8 5s., a yearling bull making 15¾ guineas. Shearling sheep made up to 54 shillings in Messrs. J. Taylor and Son's auction, hoggs realising up to 48s., other hoggs averaging about 45s. Some good lambs were sold by Mr. J. Farrow, Strubby, at 44s. 6d. each. A slow trade was experienced in the horse fair, cart colts making 13 guineas to 18¾ guineas.

Derby and the Royal Show.

The first meeting of the committee recently appointed to supervise the local arrangements for the Royal Show at Derby in June next, took place at the Guildhall, Derby on Wednesday. The Duke of Devonshire presided, and there was a large attendance.

The Mayor proposed that a fund for defraying the expenses for which the committee was responsible be opened; that the various banks be asked to receive subscriptions; and that a circular letter be issued in the names of the Lord-Lieutenant of Derbyshire, the High Sheriff of Derbyshire, the Mayor of Derby, the Chairman of the County Council, and the Chairman of the Derbyshire Agricultural Society, inviting contributions to the fund. It was quite necessary that the committee should raise not less than £5,500. They had gone into the matter very carefully, and did not see how they could do with less than that amount. He had much pleasure in announcing that up to the present £1,800 had been promised to the committee. (Applause.)

Alderman Oakes seconded the proposition.

The Town Clerk read a letter from Sir Oswald Mosley, in which he said he would subscribe £100 towards the local fund, and at the turn of the year would give a £50 donation to the Royal Agricultural Society, in addition to an annual subscription of £25. He hoped that all farmers would subscribe their guineas annually, and that everyone else would subscribe as much as they possibly could to the Royal Society.

The Duke of Devonshire said he would like to ask one or two questions. The resolution referred to a circular which was to be signed by the Mayor, himself, and other gentlemen, inviting contributions to the fund. He presumed that the circular would be drawn up by one of the sub-committees they were about to elect. He thought it was necessary that the terms of that circular should be carefully considered, and that it should contain as much information as possible as to the reasons which made the raising of that sum necessary. He was bound to say that since the meeting they held at the Albert Hall he had heard a good many expressions of opinion that there would be very considerable difficulty in raising the sum, and he did not think it was quite understood at present why so considerable an amount was required. Everybody knew, he believed, that the Royal Society required a contribution, and they had also been told that the site had been provided, and that it was very suitable for the show, but he did not think it was quite understood in what way so considerable a sum, in addition to the direct contribution to the society, was required, and he thought it would be desirable that as full information as possible should be given in order to assist in raising the necessary subscriptions.

Alderman Oakes thought it was important that the items should be put down, but as a general idea of the case with those shows he believed he was right in saying that at the last county show—at Carlisle—the expenses amounted to over £5,500; he almost thought they were £5,900.

Mr. Pakeman said that the remaining £3,500 which it was expected would be required, would be expended in levelling the site, in taking water on to the site, in providing for certain classes which were not in the schedule of the Royal Show, and in providing for local classes; and it was expected that these would absorb the difference between the cash which was to be handed over to the Royal Society and the sum which they hoped to raise.

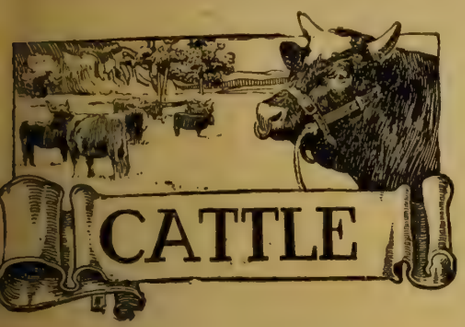
The Duke said a statement had been placed in his hands showing roughly the items, and he thought it very desirable that these matters should be included in the circular.

The resolution was carried.

On the motion of Mr. Salt, seconded by Sir Thomas Roe, the Mayor of Derby was appointed treasurer of the fund. Various sub-committees were also elected, and the Town Clerk of Derby (Mr. G. T. Lee) and the secretary of the Derbyshire Agricultural Society (Mr. S. Burton) were appointed joint secretaries to the committee.

Cockermouth Second Martinmas Hiring Fair was held on Monday, when there was a large attendance of male agricultural servants, many of whom failed to obtain engagements, as the hirings were decidedly slow. There were few experienced men in the market. Ploughmen obtained £10 to £12; strong lads, £7 to £10; and younger lads, £3 to £7. There were few girls seeking places, and these were readily hired at the previous hiring's figures.

The main hirings for farm servants at Darlington took place on Monday, when there was a full supply of men, and, except for the most experienced, wages scarcely came up to last year. Best men and foremen received £27 to £30; secondary, £22 to £24; ploughmen, £16 to £19; strong lads, £12 to £14; and younger lads, £7 to £9 for one year. Female servants were scarce, the best obtaining £18 to £20; secondary, £14 to £16; younger servants, £12 to £14; young girls, £8 to £9 each.



Notes and Jottings.

Since my last notes were penned, two very important shows have taken place—the fat stock show under the auspices of the Norfolk and Norwich Christmas Association, and the very old-established breeding and fat stock show under the patronage and main support of that great friend to agriculturists Lord Tredegar, at Newport, Monmouthshire. At the former show the fat cattle were fully up to average; indeed, better than at many preceding shows. Some remarkably good cross-bred, Irish, and Angus cattle were included in the various classes. The classes confined to animals bred and fed in Norfolk, too, were filled by a number of really choice animals.

This latter is a very important statement to be able to make, as it evidently is the outcome of greater attention being paid to home breeding rather than to be always dependent upon purchased stock. The results at this show would appear to be in favour of the home-bred animals, and this may have a wholesome effect upon the future By comparison, the best purchased stock exhibited at Norwich, and fed in the county, could not by any possible means leave as satisfactory results as those bred at home, the former having had to be purchased to begin with at such extravagant figures, and the gain in weight being very insignificant, the champion heifer, for instance, having gained less than 3 cwt. during a year's expensive feeding.

At Lord Tredegar's show some excellent fat stock were exhibited, but the great feature here was the beautiful classes of Shorthorn and Hereford breeding cattle, which were, after the few weeks' rest since the summer shows, brought out in fine condition, the winter coats upon both breeds adding so much to their appearance, and proving in a great measure that the majority at least of the animals were in the best of health. The Hereford young stock were especially rich in coat and flesh, as well as very good in symmetry, the cows and heifers in the older classes being very even in their flesh compared with a few years ago. It was very satisfactory, too, to learn from breeders that the export demand for these white faces continues very brisk.

Good though the Hereford classes were, the Shorthorns quite eclipsed them, as both the championships open to the two breeds were secured by the red white and roan, and, what is more remarkable, these coveted honours fell to exhibits from the same herd, Mr. J. Deane Willis's, the female championship falling once more to that remarkable cow White Heather, and the male championship to Bapton Viceroy, a red youngster under a year old of the most perfect proportions, covered with a grand coat, handling well, and possessing a style and character that are difficult to improve upon, or even to imagine improvement upon. Whether it is altogether as it should be that the champion prize for a bull should be allotted to so young an animal is questionable.

The problem of profitably exhibiting cattle must surely have been well solved in the results of these two animals from one herd; White Heather it is true was not bred at Bapton Manor, but was what may be termed an essay purchase, and her show-yard career has been certainly, one would think, unprecedented, as the prizes won at this show bring her total up to £1,000, or over. With regard to the bull calf Bapton Viceroy, things are quite as favourable, an offer to purchase this youngster at 1,000 guineas having been made. Seeing the continued drain upon our Shorthorns, it speaks volumes for our herds of this breed that such specimens as these are to be found, and proves the wisdom of our breeders in sticking to their best breeders.

It is gratifying this time to find that the trade for beef at the Metropolitan Market last week was of a more animated character, and that in many cases an advance of 2d. per 8 lb. took place. It is quite probable, too, that this better state of trade will continue. The season, both in the North as well as other parts, has not been altogether favourable to the finishing of cattle, and, as we have before mentioned in these notes, it is quite probable that ripe, good weights will not be too plentiful for the Christmas trade. As a mark of the want of better finishing, or of a deficiency in the season, butchers complain very much of the want of suet in the cattle, so many killing badly.

Supplies continue very heavy in the Chicago Market, the total number marketed in six days during the past week in this month being 97,373 head. At that market the same complaint exists that the supply of finished cattle is not equal to the demand, whilst that of what we describe here as half-meated is quite in excess of demand, feeders being anxious to clear out as many animals as possible before winter. The advance in the price of corn is said to be very potent in its effect in this respect. Many of these unfinished cattle, both in America and also in our home markets, are due to hard feeding through bad or indifferent breeding. With well-bred stock it is much easier to make a satisfactory finish, and in a season of scarcity of feed the trouble with hard feeders is much more pronounced.

Experiments at the University of Wisconsin have been carried out with regard to discovering the cost of producing a hundred pounds gain in live weight upon animals of various ages. These figures are rather interesting, and may also be turned to profitable account. These experiments, it is said, point out very definitely that it is most profitable to fatten cattle whilst they are still young. The older the animal the more food is required to produce a given gain. Some other stations also have proved similar results. It requires (so these experiments go to prove) about one half as much grain to produce 100 lb. of gain on calves as on two-year-olds. At the Ottawa experiment station the proportion of profit in producing a 1,000 lb. live weight in cattle of different ages was as follows: Calves, 31, yearlings 27, two-year-olds 19.10, and three-year-olds 12.80; these figures are in dollars

Such experiments as those noted above are very valuable as regards the information they give, but it must be borne in mind that the matter of food is not the only expense in producing live weight; the expenses of preparing and giving the food to the stock have all to be reckoned with. Then it must be remembered, too, that in the ordinary course of farming there is almost all the year round an immense amount of food to be consumed that is not calculated for feeding, and cannot at any reasonable expense be made productive of great results in the way of increasing live weight; and such food, when early maturity is the main thing considered upon the farm, is too frequently wasted, whereas, if some young stock were kept on for longer feeding, though they grew but slowly, it would be at such a minimum of cost that they would be found quite profitable.

The Irish store cattle trade, from the quotations obtainable, appears latterly to have gone from bad to worse, complaints on this score being loud and frequent. It does not appear to have been a good year in the sister Isle all round with cattle. Stores in the spring were very dear over there, and the dry season was not in favour of extra growth, and the comparatively bad trade for beef has added to other difficulties. The short hay and root crops in many parts of England, too, have caused a slack demand for feeders, which becomes more pronounced the nearer we get to winter. The stuff that people buy with, too, is not over plentiful, either in agricultural or commercial circles, just now, and this is not without some slight adverse effect upon prices. The opening of the new year will probably bring with it brighter times.

It is quite possible that our cross-Channel friends in the Emerald Isle have paid too much attention to crossing latterly, and so have but one string to their bow, as the cross-bred females are of but little value as milkers, or, at least, are not as popular as the Shorthorn; and upon large farms where a great number of females are reared, if they are of the Shorthorn blood, they will usually make a good price for taking on for dairy purposes. This happens most frequently when the store trade for feeding purposes is slow. The same causes that operate against feeders cause a dearth of milk, and so there is a good demand for Shorthorns in calf, when barren ones, half meated and of Scotch and Shorthorn cross, can scarcely be converted into cash.

Sale of Miss Rothschild's Fat Stock

The annual sale of Miss Alice de Rothschild's fat stock took place on Thursday at Waddesdon Manor, near Aylesbury, and, despite the wretched weather, there was a very large attendance of buyers, and the sale was a great success. Messrs. Bond and Burrows (Thame) were the auctioneers, and close upon 200 sheep, all in prime condition, and 90 Polled Aberdeen-Angus oxen and Shorthorn heifers were sold during the afternoon. The bulk of the stock remains in the Vale of Aylesbury, but several of the choicest lots were bought for the London market. Oxford Down ewes sold readily at an average of £16 16s. a pen, while prime wether tegs were cheap at an average of 42s. a head. The cattle were a particularly good lot, and competition for them was exceedingly keen. They averaged from £20 to £30 a head, and were good value at this time of the year.

Horse Notes.

"He doth nothing but talk of his horse."
—Merchant of Venice.

That the breeding of Clydesdale horses is making satisfactory progress in South America is evident from the fact that a home-bred one not only won in his class at Palermo, Buenos Aires, but likewise took the championships, and was disposed of by auction for the useful price of 4,000 dollars, or £334. This was Mr. Charles Bell's three-year-old stallion, Rincon Sidney, and it should be added that this is a record price for a Clydesdale bred in South America. There is no need, however, for English and Scottish Clydesdale breeders to fear that they will encounter any serious opposition from breeders in Buenos Aires. South America and other countries will be able to take, and will indeed require, our stallions and mares as they have always done, for the tendency in most countries to which our island acts as a stud farm is for our breeds to lose both size and substance and character in a very few generations unless recourse is frequently had to our native strains. Indeed, it would appear as if the more successful an English or Scottish breed is in a foreign country the better it is for English or Scottish breeders, and the better market there is for their stock.

Professor Ridgeway, speaking of the Clydesdale horse, says that he is derived from the same source, and is practically of the same breed as the Shire. I am afraid this will rouse the ire of some of my Scottish friends, but it is nevertheless a fact which there is no gainsaying. The history of both breeds shows distinctly that their size and power is due in a great measure—if not entirely—to horses imported from Flanders. Nor is this all. In the early years of what I may, perhaps, call the Clydesdale movement, and in the years immediately preceding the formation of the Clydesdale Horse Society, there was a large importation of the heavy type of Shire mares into the valley of the Clyde. Lincolnshire, indeed, was thoroughly exploited by Scottish dealers, and the best customers for weighty mares at the Lincolnshire fairs were Mr. David Riddell and his confrères.

It is unnecessary to enter into particulars of the facts which led to the formation of the Select Clydesdale Horse Society of Scotland, a society which was formed some six or seven years after the formation of the Clydesdale Horse Society of Great Britain and Ireland, which latter society was formed in 1877. The late Mr. Lawrence Drew took a leading part in the formation of the society, and Mr. David Riddell and other breeders of eminence gave it hearty support. So far as I know, the society only published two volumes of a stud book—at any rate, that is all I have—and after Mr. Drew's death it languished, and eventually was dissolved.

At the time it was in being, however, it excited a considerable amount of attention. Able writers upheld the contention which has since received the support of Prof. Ridgeway, that the Clydesdale and Shire horse were identical, that they had been developed on different lines, and that the best possible cart horse was the the produce of a cross between the two. This being as they maintained, fully established, they urged an amalgamation of the two societies. It was, however, scarcely likely that this would take place. There were too many conflicting interests, and the two societies had been esta-

blished too long to admit of any amalgamation. So though the controversialists had the best of the argument, their efforts had no immediate practical result.

That they had had a practical result, however, will, I think, be admitted by those who remember what the Clydesdale and Shire horse were like twenty years ago. The Clydesdale had the best of legs and feet, but was light on the back, deficient in back ribs, and unless his immediate ancestors contained a large proportion of English blood, which was generally the case in horses that came to the front, he was wanting in size. Nowadays the Clydesdale has to a very great extent lost that weak back and light middle which the critics used to find fault with, whilst the hard, flinty bone, big, well-shaped feet and silky feather are maintained.

It used to be the boast of the Clydesdale men that sidebones were practically unknown amongst the breed. They were, at any rate, plentiful enough amongst the Shire horses, and in the early days of the Shire Horse Society's shows there were plenty of northern breeders who scoffed at the coarse feather, rough bone, sidebones, and moderate fat of the Shire. But now we have altered all that. The coarse, curly "hair" has developed into feather of silky texture, the bone is of the flinty texture, which is so desirable a quality, the feet are well shaped, with the quality of the horn tough, and a greasy legged Shire is now as unknown as at one time he was common.

It is not a little curious, when one comes to think of it, how the two breeds have, as it were, "approached" each other in characteristics during the last twenty years, and how the results, which it was at one time wished to bring about by a mixture of the two breeds, have resulted from judicious breeding on Stud Book lines, and judicious management. For there is no doubt that a great deal of the improvement of the Shire horse's feet and legs is due to a more natural treatment of the individual and to the doing away with that system of forcing, which, injurious enough to any breed, must have been much more hurtful to a heavy carcased and somewhat gross horse like the Shire.

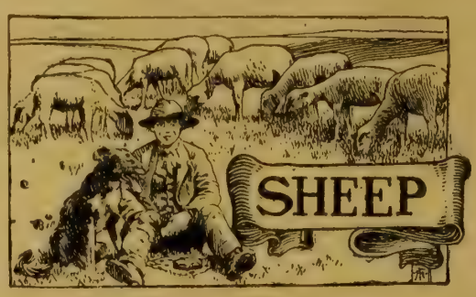
The Select Book of the Select Clydesdale Society of Scotland is now practically an unknown volume, but it is interesting to dip into its pages occasionally. The first directors were Mr. Lawrence Drew, chairman; Mr. David Riddell, Mr. Peter Brown, Bishopston, Renfrewshire; Mr. Thomas Muirhead, Townhill, Dunfermline; Mr. Thomas Brown, Skellyton, Larkhall; Mr. James Smellie, Stravenhouse, Carluke; and Mr. John White, Nether Craigends, Renfrewshire; and amongst the three hundred and odd members were some of the most eminent breeders in Scotland and the North of England. There can be no doubt that the society sustained a severe blow by the death of Mr. Lawrence Drew, and had that gentleman lived a few years longer there is little doubt but what we should have heard more of the Select Clydesdale Society if he had lived a few years.

I have pointed out already that the work of improving Clydesdale and Shire horses has been well done, on the lines laid down by their respective breed societies, and it is quite likely that had there been anything approaching the present state of things in existence twenty years ago we should never have heard of the Select Clydesdale Society. But that society did much good in tracing the history of some of those horses whose names appear in the pedigrees of famous stallions in the Foundation Volume of the Clydesdale Horse Society's Stud Book. For instance, there is Tintock, a pure bred English horse, and was purchased in Cambridgeshire by Mr. Alexander Galbraith, of Croy, Cunningham, Killearn. Tintock travelled the Strathendrick district, and was famous as the sire of good mares. The great stallion, Lord Salisbury, 1205, was of a Tintock mare, and other good mares by him, Auchinbroig Darling, the dam of Mr. Martin's Damsel and Diana Vernon, Mr. McNabb's Princess, and that great mare Keir Fanny.

Another famous Clydesdale stallion that had an English origin was Lord Lyon, his dam having been purchased in Derbyshire; then Emperor, a great winner in Scotland and a great sire, was an English horse that was bought in Cambridgeshire by Mr. Andrew Johnston, of Aberdeenshire. His most notable son was probably Lord Clyde, the sire of Old Times, from whom many notable Clydesdales are descended. Another striking instance of an English horse that made a mark in the Clydesdale Stud Book, is that of Mr. Robert O. Watson's Champion. He was bred by Mr. Neville Melbourne, Lakehouse, Fillingham, Lincolnshire, and was by Napoleon—Bud by John Bull. He won as a foal at Lincoln, as a yearling at the County Show at Brigg, and won as a two-year-old against all ages at Whitby, the prize being £100. Then he went to Scotland, where, as a three-year-old, he won at Haddington and Aberdeen. Next year he took second prize at the Northern Agricultural Society's Show, and in 1874 he was second at the same society's spring show, the second prize on that occasion amounting to £40. He was also second at the same society's summer show in the same year. He was foaled in 1869, and in colour was a dark chestnut

If proof were wanted that the Clydesdale and Shire are of the same origin, it is to be found in the fact that the greatest stallion in the Clydesdale Stud Book, the horse of all others who has made the greatest mark as a Clydesdale sire during the early years of the Clydesdale Horse Society, and a horse of all others to which breeders love to trace their stock, was a crossbred horse on both sides. This was Mr. Lawrence Drew's famous Prince of Wales, whose sire, General, was by Sir Walter Scott, from a grey English mare, and whose dam, Darling, was by Samson, alias Logan's Twin, from an English grey mare. It is also important to notice that the dams of five of his most famous sires were English—viz., Prince of Altyre, Hawkhead, Lord Douglas, St. Lawrence, and Prince of Avondale, all of them Glasgow Premium winners, a fact in itself which is sufficient to stamp their quality.

THE LOOKER ON.



Notes and Jottings.

Experimental feeding in connection with sheep is, one is pleased to note, receiving more attention nowadays. Quite recently there have been made public the results of two sets of these experiments—one conducted on the Mongoswell's Experimental Farm of the Edinburgh and East of Scotland College of Agriculture, and the other at the Cumberland and Westmorland County Council Farm School. There is no need to offer much comment on either of these two valuable reports, further than to say that were such reports published from each district of the country, sheep feeders would certainly have before them a mass of most valuable information, the proper application of which would both save them loss and add materially to the profit that ought in every case to be realised from feeding sheep.

Another source from whence good information could be obtained in relation to the feeding of sheep is Smithfield Show. Under its present system of dual classification, i.e., one for competition alive and the other for competition in the carcase, Smithfield Show affords a unique source from which this kind of information should be obtained.

There are, of course, difficulties to be overcome, but these ought not to be insurmountable, in obtaining the needful information which ought in each case to be provided by the feeder of each entry, i.e., food given and the quantity of each kind, method of feeding and general treatment of the animal during the course of preparation, with its live weight at the commencement of the preparation and at regular intervals afterwards. The different object for which the two sections are being prepared would, of course, cause a wide difference in the length of time the animals were under preparation, and probably also in regard to quantity of food consumed. This would give additional value to such reports, because in the main it would show where the supposed profitable feeding ration ended and that for the admittedly unprofitable one for the show animal began.

Records of this character have been often attempted, but, so far as my knowledge is, none have ever been properly tabulated and published. It will probably be found that some feeders have a great idea that it would mean divulging a trade secret to disclose how they fed their showyard charges. This point may have some bearing upon the question, but not a vital one, because it could easily be got over by making it a condition of entry that this information should be supplied. Asking a very successful shepherd how he had fed a certain pen of particularly fine sheep, the reply came, brief and short, "upon the best of everything I could get for them." In this instance it was evident that the "best of everything" had been successful. Others would like to have known of what this was composed, and if the whole of the benefit that ought to be got from our fat stock exhibitions, such information should be given.

Far and away too many feeders—and, I am afraid, breeders also—run away with the idea that the object they show for is to secure notoriety and reputation for their own sheep and flock; but this is not the object at all, no matter who may be the owner or the feeder. The first and most important object for which every entry at a fat or breeding stock show is made for is to exhibit to the public, both at home or from the Colonies and abroad, the particular qualities and merits of the breed represented by the entry, and also at the same time to afford any who may so desire it opportunity to compare these points with others of a similar character in other breeds.

There is another manner in which the Smithfield carcase show ought to be, and could be, made of infinitely more value to flockmasters than it is at the present time. It is this: that the expert butcher judges should give a written report upon the individual carcases they award prizes to, and state distinctly and clearly what are the principal reasons that decided them in giving preference to the carcases that won the different awards.

It will probably be urged against this suggestion that it is an unusual one and that the judges in the other section of the show do not give their reasons for giving preference to either this or that animal. This is so, but then the two exhibitions are not at all comparable, because in the case of live sheep, nearly all, or, at any rate, most of the reasons given would be such that could not well be settled until the animal was slaughtered; but in the other section there can be urged no real objection, and further, as it was one of the strongest arguments put forward by the butchers when they succeeded in addition of this carcase section to the show, that the great object in view was to show the feeder the kind of carcase most in request. Therefore, in asking, on behalf of the feeders, that the butcher expert judges should put the reasons for their awards in writing, we are only carrying the great argument used to secure these excellent classes to its logical conclusion—namely, theat the feeders may be informed of the carcases most in demand for the London market.

South Country markets give a decided preference for mutton of the Down breeds, except in Kent and part of Sussex and Dorsetshire; in London Down breeds are given decided preference, and yet, despite these facts, that great colony of ours, New Zealand, whose mutton and lamb has secured for itself so high a reputation in our market, gives a decided preference for sheep of the White-faced breeds. Border-Leicesters, Leicesters, Kent or Romney Marsh, and Lincoln sheep are all largely represented in that colony, and certainly form a large proportion of the English breeds kept in that colony.

Quite recently Mr. W. O. Rennie, of Canterbury, New Zealand, has secured from Mr. D. Hume, of Barrelwell, Brechin, a valuable selection of stud sheep—a ram and two yearling ewes. It will be of interest to note that Mr. D. Hume sent his Highland Show champion ram last year to New Zealand, and another order this year is indicative that satisfaction has been given, or otherwise no second lot would have been wanted from the same flock again this season. Hitherto the flockmasters of New Zealand have been content to run one Flock Book operative for the whole colony, in which all the different English breeds have been represented. The Kent or Romney Marsh sheep-breeders have now found themselves strong enough to run a society of their own. The first volume of their Flock Book has recently came to hand, and it is a matter of gratification to find that the principal rules of this society are counterpart with those that have led to the successful career of the parent association for this breed at home.

The agenda for the National Sheep-Breeders' Council meeting in December has been issued, and the more important subject for consideration is doubtless the selection of the subject for discussion at the next International Conference, which will be held in June next. Owing to the alteration of the place of the Royal Show next year the conference will, we understand, take place at Derby on the day preceding the opening of the Royal Show in that town.

The value of these annual conferences of sheep-breeders during the past six years is generally admitted. In fact, the papers that have been read on diseases of sheep at the last two conferences by Professor Cave have been in request from all over the world, and wherever these excellent papers have been sent they have met with thorough approval and been greatly appreciated.

Buyers at Smithfield and other Fat Stock Shows should see that the Cattle have been fed on

MOLASSINE MEAL

READ WHAT THE BUTCHERS SAY:

Mr. B. J. H. BROWN, Family Butcher, West Street, Somerton, says:—

"I have for this last two years used Molassine Meal for pigs, and find it answers well. One lot of 20, which was a most inferior lot of pigs when I bought them, did remarkably well after being fed on Molassine Meal, and paid a good profit when sent to the bacon factory. Others that I have fed on Molassine Meal I have killed myself, and can therefore testify as to the quality of the pork."

Mr. A. KIRK, Butcher, Uppingham, writes:—

"Quite accidentally I bought a bullock of Mr. Mason, of Barrowden, through a friend at Preston. I was surprised, and very dissatisfied with my judgment, when I put the bullock on the scale, the same weighing very considerably above my outside weight. When Mr. Mason told me that he was a regular user of **Molassine Meal** I admitted that I knew nothing of the real value of **Molassine Meal**, but I accepted the above fact as a direct proof of its worth. I shall therefore be glad if you will send me a quantity of **Molassine Meal** for my own use."

Messrs. T. WEBBER & Co., Butchers, 178, Edgware Road, Hyde Park, London, write:—

"Having purchased a large number of cattle from Messrs. Wharton Bros., of Bircham, near Sandringham, Norfolk, recently *fed on your Molassine Meal*, we have much pleasure in informing you that the last lot we had were some of the *best cattle we have ever had killed;* they were so full of good quality, lean, a beautiful rich colour, and gave the greatest satisfaction to our customers. In fact they were what the public require."

Extract from a Customer's letter:—

"The butcher said, 'I have never, in all my experience, cut up such a bullock; the fat was like butter; it was prime.'"

Manufactured by HENRY TATE & SONS, LIMITED, Sugar Refiners, LONDON and LIVERPOOL.

SILCOCK'S FATTENING CAKE

Made Specially for Fattening Purposes.

We have made this claim for 12 years, and each year it has been more thoroughly established and confirmed by thousands of farmers.

YOU MAY DOUBT, but test it for yourself as others have done; you will make money by the experiment—we will gain a customer.

It is guaranteed by analysis and practical feeding tests.

We make one cake do one thing well. One cake for all purposes means waste and inefficiency.

YIELDS BETTER RESULTS

READ THIS !

Mr. HERBERT LAKE, Credition, Devon, writes :—
September 4th, 1905.

"I was a great believer in Linseed until I proved that your Fattening Cake is much superior; as a test, I fed one lot of Steers exclusively on your Cake, and another lot on English Linseed (weight for weight), and I was very much surprised to find that the result gave a much greater weight of beef in favour of the Fattening Cake. I can thoroughly recommend your Cake to every farmer as the best (including Linseed) that can be used. Please send me two more tons, ex contract, at your earliest."

We respectfully Solicit a Trial Order.

Our manufactures include Fattening, Rearing, Dairy, and Universal Cakes & Meals, Cotton Cakes, Soluble Calf Meal, &c.

We invite inspection of Samples exhibited at the London (Smithfield), Scottish National, Dublin, Birmingham, and Leeds Fat Stock Shows.

For particulars apply to Local Agents, or to

R. SILCOCK & SONS, Stanley Hall, Union St., LIVERPOOL.

SMITHFIELD SHOWS: ANCIENT AND MODERN.

This is Smithfield Show week, the very fact of which turns all our thoughts to Christmas roasts and other associations with the coming festival. The Islington Royal Agricultural Hall will have a magnetic attraction to-day for those of our nobility and country gentry who follow the Royal lead in bringing farm animals to the highest perfection. Thither will flock leading chiefs of the grazing fraternity from all parts of the kingdom, the Scottish disciples of the great M'Combie, the English followers of Ellman, Fisher Hobbs, the Overmans, Bennetts, Popes, and a number too large to be mentioned, who welcomed the annual gatherings of the Club in its early history and during the exhibition days at Baker Street, until in 1862 the present building it now inhabits at Islington was entered upon for the first time.

The Smithfield Club has gone through immense changes; probably no institution in existence has been metamorphised more. Formed in an age when steers were bred for the yoke, and not to be fed for beef until they had fullled several years of field service, the Smithfield classes were for much older animals than appear there now. Some of the oxen of the earlier shows were truly gigantic. In the minutes of the first show the dimensions and weight of a Hereford bullock are stated to have been 7 ft. high, and to have girthed 12 ft. 4 in.; while of Mr. Westcar's first winner it is stated that the bullock measured 8 ft. 11 in. long, and was of the weight of nearly 300 stone. Not until 1868 did the Club institute weighing the cattle alive; but the following year a cross-bred five year-

seven months ox scaled 27 cwt. 3 qr. 19 lb., and a Shorthorn four years six months one 26 cwt. 8 lb. As fewer yokes of oxen appeared in British fields, the Club by degrees adapted itself to the times by curtailing the age limits of the senior classes, and throwing the portals of admission open to younger steers.

Just thirty years ago did the Club institute lamb classes. Extremely difficult to youthful agriculturists is the comprehension of what the woolly display could have been like previous to 1875. That there were numerous monstrosities of wasteful tallow is very certain, especially as ewe classes were instituted in 1870. The classes for yearling steers were not established until 1880, five years after that of the lamb classes. We have not to go far back for the time of the present arrangement of the cattle classes of the principal breeds. In the early times of the Show, and, indeed, for a long course of years, it was deemed right and proper to offer prizes for cows, but not for heifers. Then in its mid-history there were classes for both, of many of the breeds; but now we have for some time abolished cows, but cherished the exhibition of heifers.

This is in conformity to what has become one of the chiefest aims of the institution—the promotion of early maturity. So far as the educational objects of the show are concerned, there are object-lessons both to show the sort of animals best adapted to arrive at greatest perfection in substance and quality combined, and those which will develop the heaviest and best carcases at the earliest age. The carcase classes are serviceable by displaying the kinds that have tendencies to combine lean flesh with fat while fattening.

Seasonable Topics.

The Business of Farming.

We think that every one who is engaged in agriculture will agree that farming is an occupation in which a man may spend a lifetime, and at the end of it be able to say in all sincerity that he has still got a good deal to learn. Yet in spite of this fact it is surprising how many people there are engaged in other occupations, who will glibly tell you what the farmer ought to do to make his business pay better. We take it that if one of the farming fraternity went into a draper's shop and began to tell the draper what he ought to do, he would be promptly ordered out, and told to mind his own business, and yet the self same draper may be one of those highly educated individuals who discuss agriculture, point to the causes of depression, and show where the farmer is all wrong in the way he conducts his business. In fact, it seems to be a privilege of every man in the street to discuss the farmer's way, and more often than not the latter is set down as a perfect ignoramus who has golden opportunities offered to him, but has not common sense enough to take advantage of them. Poor deluded advisers! Would it not be wiser of them to turn their attention to matters nearer home, and leave the farmer to look after himself? It is not to be wondered if the latter gets a little out of patience sometimes when his methods are criticised, and he is told what he ought to do by a man who does not know one end of a plough from the other. It is extraordinary that every one should know just exactly what the farmer ought to do to make his business more profitable, and cope with foreign competition, better than the poor farmer himself who has been in the business all his life, and is thoroughly acquainted with the ins and outs of it. We do not find that the farmer is averse to instruction, provided the adviser is a practical farmer himself, but he does resent being the pupil of every man in the street, and in this he has our sympathy.

❦ ❦ ❦

Farmers as Workers.

One of the hackneyed cries of the man in the street, in the tramcar, and in the railway train, when discussing the shortcomings of agriculturists, is that the farmer of to-day does not work like his grandfather did, and his daughter, instead of being content to turn the handle of the churn or scour the milkpans, prefers to spend her time in playing the piano. What moonshine it all is, to be sure, and one would think that farmers generally ought to be nothing more than mere labourers. But let us look into the matter a little. Here is a man on a moderate-sized farm in which he may have invested some five or six thousand pounds in stock, implements, etc. Now if that amount were invested in some gilt-edged security it would bring in sufficient to keep the man in reasonable comfort and allow sufficient to buy a piano for his daughter, but because the farmer prefers to invest his money in agriculture, the man in the street suggests that he should be a drudge himself, and his daughter likewise. Take a shopkeeper, for instance, with a business in which he has five or six thousand pounds invested; he does not carry out parcels, neither does his daughter scrub the shop floor. But in the old days, argues the man in the street, even the well-to-do farmer used to work harder than he does now, and his wife and daughters used to make the butter and cheese with their own hands. Quite so! And in the old days the shopkeeper used to be contented to live in the town street over his place of business, but now he must have a lock-up shop, and dwell in a smart villa in the suburbs, so after all it is merely a question of change in habits and customs. The small farmer must work with his own hands if he is to pay rent and keep solvent, and very often he works harder than many men who earn a good deal more, but if a man has as much money in a farm as would keep him in comfort if invested at 4 per cent., it is a pity if the place will not provide his daughter with a piano and keep him without doing labourer's work.

❦ ❦ ❦

Would it Pay to Grow Onions?

We have a newspaper report before us giving an account of the wreck of the ill-fated "Hilda," a short time ago, in the channel. It is stated that amongst the passengers were some eighty Breton onion sellers, who had been in this country disposing of their wares, and were on their way back to their homes, when most of them perished along with the unfortunate vessel. The report further states that these Breton peasants were in possession of an average sum of about £48 each, which they had received for the sale of their onions. If this is multiplied by eighty it represents a sum of nearly £4,000, and, fortunately for themselves, all the onion sellers who come to this country every year from the other side of the Channel were not on board the "Hilda." It may readily be seen, however, from the above figures that the Breton onion men take a considerable sum of money from this country every year, and yet so far as we know onions can be grown in England just as well as they can in Brittany. Yet the fact remains that but a small proportion of the onions consumed in this country are grown at home. They come mostly from Spain, Egypt, and the North of France. It is argued that onions do not pay to grow in England, which is strange, considering that the Breton peasants not only grow their onions, but they ship them across the Channel, pay their own travelling expenses, and hawk the bulbs from door to door. We grant it that the Breton onion sellers do not put up at first-class hotels, but they have to live, and their expenses must be considerable. Further, it is not likely that they would continue their traffic unless there was some profit at the end of it. We grant that onions would not pay if given the same treatment as mangold-wurzel, but if liberally cultivated a very heavy weight of bulbs can be obtained from an acre of land, and if the return is put at, say, 5s. per cwt. the amount would be considerable. At any rate, if Breton-grown onions can be profitably sold in England it is strange if they would not pay to grow at home to a greater extent than what they are.

❦ ❦ ❦

The National Potato Show.

The promoters of the National Potato Society have every reason to congratulate themselves on the success of the second exhibition, which took place at the Royal Horticultural Hall, on November 23 and 24. The big hall on the above dates was filled with potatoes from end to end, and potato men were very much in evidence. In comparison with the first show last year the competitive classes were well filled, and some excellent tubers were staged. Most of the large trade growers were represented, but evidence that the potato boom is a thing of the past, was given in the fact that glass cases protecting precious tubers were conspicuous by their absence. On one stand we observed several novelties covered with wire guards, but the tubers were mostly unprotected, and the numbers of Eldorado there were exhibited showed how largely the sensation of the last show has been increased in the meantime. Several of the trade exhibits were large and imposing, but we question the educational value of getting so many varieties together, as on one or two of the stands we noticed varieties which are generally admitted to be now worn out, and are never recommended on account of their predisposition to disease. Surely it serves no useful purpose to exhibit potatoes of this class, and goodness knows there are sufficient varieties in cultivation without them. We see no good reason for exhibiting a potato that the exhibitor would not recommend any one to grow, and it would be infinitely better to let the worn out varieties drop out in favour of others of more recent introduction. On the whole, however, a finer display of potatoes has not been seen together of late years, if at all, so the society can congratulate itself so far. In looking through a show of this kind, however, one cannot help observing what a marked similarity there is between many of the so-called distinct varieties, which appear to differ only in name. About the time of the boom new potatoes were simply rushed on to the market, and now things have quietened down a little the National Society might usefully employ its time in doing some weeding out.

❦ ❦ ❦

Eggs and Bacon.

The man who enjoys a fresh egg along with his morning rasher has the privilege of paying 2d. or more for it just now, and while he chafes under this treatment, the poultry-keeper is racking his brains to find out how to make his hens lay more eggs at the above price. We do not go so far as to say that all the eggs at 2d. each even are absolutely fresh, for eggs are scarce, and the disturbance in Russia is giving us a cause. In the ordinary course large quantities are imported from the land of the Czar, but the supply is reduced, as the people who collect them, and the carriers who take them to the stations are engaged instead in political troubles. Eggs are dear and so is the rasher, because bacon of the best kinds is scarce, on account of the fact that pig-breeding has not been in a flourishing condition of late. Probably most of our readers cure their own bacon and produce their own eggs, and if so they will not feel the pinch, and those who have these commodities to sell are amongst the fortunate, but the townsman who cannot conceive the possibilities of a breakfast without eggs and bacon is hard hit just now.

Lincolnshire Chamber.

The Lincoln Chamber of Agriculture, at their last meeting, discussed certain subjects brought before the Central Chamber. The first concerned the law of trespass, and the meeting adopted a resolution passed by the Brigg branch stating that the present law is very inadequate, as it permits no procedure to be effective unless damage is proved. With regard to the enforcing of the Food and Drugs Act, the Boston branch's resolution that the use of the Act ought to be extended was carried. Lord Roberts's address to the London Chamber of Commerce on Imperial defence was discussed, and the Chamber agreed to the latter part of a Grimsby resolution advocating grants to school cadet corps.

Cheshire Chamber.

At a meeting of the Cheshire Chamber of Agriculture on Monday, several farmers complained of the great amount of damage done by trespassers in pursuit of mushrooms and other natural growths of marketable value, and expressed the opinion that the law should be so altered that trespassers might be prosecuted even though farmers are not able to prove actual damage to land or crops. After some discussion, a resolution was passed expressing the opinion that it is desirable, in the interests of occupiers of land, that the Board of Agriculture should undertake to inquire into the existing law of trespass, and to promote a bill that shall protect land occupiers from loss caused by searchers after natural growths of a marketable kind.

Agricultural Politics.

BY A LOBBYIST.

One of the reasons which have induced in Mr. Balfour a desire to resign rather than to dissolve—a desire, that is, to persuade the Liberals to form an ad interim Ministry before an appeal to the country—is the fact that the agents of the Party were convinced that it would be to their advantage to postpone the General Election. I admit that the renewed Home Rule controversy, and the certainty that Sir Henry Campbell-Bannerman has not renounced his old fidelity to that faith, may have some effect in inducing the Unionist Free Traders to pause ere enthusiastically giving their whole-hearted allegiance to the Radical candidates; but, frankly, I do not believe it will have any serious dispiriting or demoralising influence on the general rank and file of Liberalism. That rank and file is forgetful of much in its exuberant preoccupation with anti-Protectionism, anti-Chinese labour, and anti-Education Act. However, there is no doubt that there is a good deal of leeway to be made up by the Conservatives in the constituencies, and more particularly in the counties. If this be made up, the Conservative organisers believe they will stand an infinitely better chance. Whether the Conservative candidates have in the past allowed themselves to be too sensitive to the electoral ill-omens I will not say; but it is certain that a great effort is being made to throw off the depression which had possessed them. Sir Alexander Acland-Hood, the chief Conservative Whip, has set a fine example in this direction in the West Somersetshire division—he has followed his own picturesque advice to enter the electoral lists with "tails up," and the result has, I am assured, been entirely to his satisfaction. After all, the rural labourers—and it is, I repeat, in the counties where the ill-omens have had their most repellent appearance—are very human; and they are not likely to fight too warmly for a candidate who lachrymosely prophesies his own licking.

• • •

A Liberal organiser assures me that one of the influences which are likely to operate to the advantage of the Conservative candidates is the great comparatively recent increase in local rates. If not a particularly subtle, it is at least a particularly valuable argument to point out that the local rates now, as compared with what they were when the Tories came into power ten years ago, have increased by so much per cent. The deduction is, of course, inevitably always the same. The point could be hitched on to an arraignment of the general expenditure of the Government, which, according to the Liberal publicists, means something like £1 10s. per head for every man, woman, and child of the population, as compared with what it was under the last Liberal Government. We have an illustration in the New Forest by-election of how astutely this point is being utilised. There, our old friend, Mr. James Judd—the Liberals are never tired of playing Mr. James Judd as "the Liberal farmer" in the Southern constituencies—has unceasingly pointed out that the rates in his particular parish have gone up from 2s. 3d. to 4s. 10d. since the passing of the Agricultural Rating Act. I do not opine from this (I have not seen any full report of Mr. Judd's speeches) that he has been lisping the old assertion that the financial advantage derivable from the Rating Act has been diverted into the pockets of the landlords. I assume, rather, that he is contending that there have been a variety of other rate-increasing causes, and in particular the Education Act (all, of course, due to the Government), which have unfortunately more than counter-balanced any benefit received under the Rating Act, and which should more than suffice to eliminate from the rural breast any gratitude felt for that measure.

• • •

That the Education Act has resulted in an increase of the rates, though not generally in anything like the degree indicated by Mr. Judd's figures, is undeniable. I suppose this retaliatory argument is all fair enough. If the Conservatives claim credit for having conferred a rating advantage, they must inevitably accept the responsibility for any rating disadvantage which may have, accidentally or intentionally, resulted from their action. The retaliatory argument is, indeed, under the circumstances, a natural sequel. All the same, this should not prevent the Conservative organisers seeking to checkmate it.

• • •

I think Lord Rosebery may in one sense be grateful for the fact that his anti-Home Rule declaration in Cornwall has served to dwarf his declarations in regard to land reform and small holdings. There has long been a belief prevalent in Radical circles that on the question of land reform Lord Rosebery is hopelessly out of touch with the Liberal Party. The caustic assertion has been sometimes made that the land-reform faiths which possess him would have been thought too modestly moderate a couple of generations ago. Certainly, if all that Lord Rosebery proposes are a series of small holding experiments on Crown lands, he is behind the disciplined thought of a considerable element of Conservativism on this question. And is the establishment of small holdings the be-all and end-all of the agrarian question? Have the tenant farmers no claim for Parliamentary consideration and attention? Is the whole general problem of land tenure so satisfactory that it needs no examination and reform? Has the State done all it should by way of paterfamilian generosity and sympathy, and wise, stimulating investment in recalling the old class of yeomen to the land? Is the State to pass heedlessly by the new influences born in the villages in favour of a wiser system of benevolent State intervention in the interests of improved culture? Not a word had Lord Rosebery to say on these grave issues. It may almost be assumed that they had never intruded themselves upon his vision. Beyond this, too, was he right in assuming that the establishment of small holdings could not themselves be undertaken by landlords, because of the improbability of the immediate expenditure being recouped? Most assuredly, this is not the experience of his friend, Lord Carrington, or of the owners of the small-holding colonies which exist in at least three parts of England.

• • •

Lord Rosebery was possibly right in another sense, to speak hesitatingly on this matter. If his Bodmin speech reflect his final and formal views on the land question, those views are so entirely out-of-date as to be, I repeat, decades behind the proposals of Conservatives like Sir John Dorington and Sir John Kennaway—views expressed in the Bill (which they backed) of Mr. Jesse Collings. These distinguished Conservatives ask that the State should play a part in the interest of improved culture and for the benefit of the cultivator. They have in this advanced far beyond the infantile, prefatory stage of Lord Rosebery. His lordship has come very late to the study of this question. His friends on the Land Law Reform Association ought to supply him with some of their literature. This should, for instance, include Mr. Channing's two Bills (his Small Holdings Bill and his Agricultural Holdings Bill), and they should, if possible, supplement this with a copy of Mr. Jesse Collings's Land Purchase Bill. I do not know Lord Rosebery's actual position in our politics—nobody does—but if he be still a Liberal leader he should see to it that he does not lag behind that old-fashioned Conservatism which is possessed by a sentient comprehension of practical and prescient facts.

• • •

Of course, there are few who will not agree with Mr. John Burns in rebuking the wild anticipations which are being associated with the idea of farm colonies. "What," asked the Boanerges of Battersea, "would be the use of taking, say, a watchmaker or optician from Camberwell to dig gravel on Salisbury Plain in the hope that he might grow a few tomatoes?" And there is truth behind the purpose of this cynical interrogation. To listen to certain of the philanthropists, whose philanthropy consists solely in the State putting its hands into its pocket—sometimes, by the way, to enrich themselves, for they would not object to a well-paid berth under the scheme—and dumping the human gargoyles and physical adornments of our street-corners down upon waste land, you would be justified in imagining that poverty would, hey presto! be at once banished, and the halcyon day have arrived. The statecraft of these fellows is revealed in the belief that anybody, excepting, of course, the skilled farmer or villager, can make a living out of the land, and that the longer the migrant to that waste land has lazily held up the lamp-post at the street-corner the better he is fitted for the job. He would not know a mandrake from a comet, but this would be all the higher qualification. John Burns is thus right in putting the matter bluntly. Still, farm colonies will be tried. Does not, by the way, Sir Walter Foster show us the best method of initiating the experiment? Sir Walter suggests two kinds of colonies—the one detentive, disciplinary, and preparatory; the other where skilled cultivation could be resorted to. It would be from the latter, of course, that labourers, allotment holders, and possibly small holders, would emerge; and those colonies would, in a large degree, be finally recruited from the first variety of colonies. Of course, a large body of men—those who have drifted from the villages into the towns, and there find themselves rudderless and aimless—would be already equipped for work on the second series of colonies. Still, I repeat, John Burns is to be congratulated upon his common-sense rebuke to the men who shout "Farm colonies" and "Back to the land," and allow the words to have the soothing influence of that blessed word "Mesopotamia."

• • •

I find that an increasing number of Liberal candidates have resolved to include in their electoral appeals a demand that the principle of the Market Gardeners' Compensation Act shall apply to all holdings. Of course, the Market Gardeners' Compensation Act may be described as the embodiment in legislation of what used to be known as the Evesham custom. I am told that there is not a Liberal candidate in Warwickshire and Worcestershire, which naturally used to be affected by the Evesham custom, who does not subscribe to this proposal. Of course, as with Mr. Channing they admit that though the tenant should be given a statutory right to carry out all improvements suitable to the holding and necessary to its proper working, in the case of buildings and certain other permanent improvements notice should be given to the landlord, who, of course, might carry them out in his own way. What have the Conservatives to offer as a counter-seduction to this proposal? I can perceive nothing, diligently as I have studied the reports of speeches by Conservative candidates at Chambers of Agriculture and rural meetings. Of course, some of these Liberals cross the t's and dot the i's. Compensation for the whole value an improving tenant has added to the holding on a renewal of the tenancy (whether he quits or remains), compensation for the value added to the holding by continuous good farming and the laying down of permanent pasture, compensation for disturbance, compensation for damage caused by winged game, and freedom of cultivation and sale—these are the specific proposals advanced in certain of the Southern and Eastern counties. In other words, there be Liberals who not only appeal to the farmers because of an increase of rates, but because of their own distinctive affirmative policy. Again, I ask my friends the Conservatives, where is their affirmative policy?

Messrs. Little and Ballantyne, Carlisle, have issued a Planters' Guide, which gives details of their stocks of trees of all kinds, roses, etc., for 1906.

NORTHERN NOTES.

The month of November is proverbial for its discomfort, December brings greater cold but clearer, brighter days, and snow is always more welcome than mist and fog, while we find it more pleasant to walk over frozen ground than to flounder through mud and puddle. It is said that in the end of October and the beginning of November, wheat sowing was stopped in some of the Midland districts through the dry condition of the soil, but there is now a stoppage in the North from the opposite cause.

For some weeks past hired threshing machines have been at a premium, the weather not permitting more than about two days work to be effected in a week, and meanwhile the cattle-yards had to be daily littered and the supply of threshed straw on many farms was totally exhausted. The sheds, at least, of the cattle-yards must be kept clean and dry, so that the animals may lie down comfortably, or they cannot thrive. A fat bullock has something of the gentleman about him, and he has a great dislike to lie down amongst wet and dirty straw as a smartly dressed lady has to crossing a ploughed field in a rainy season. It is otherwise when the snow is on the ground, and a bullock will often repose on the snow-covered litter in a yard with the greatest apparent comfort and satisfaction, especially when it is somewhat frosty and there is a good thickness of manure beneath his body; to him the heat from the decomposing dung is a source of some comfort.

But if the farmer has had a sufficiency of rain, the dwellers in the towns need more, although, in spite of their needs, they may not desire more. The available supply of water for domestic purposes in the large towns and manufacturing districts is very scanty, and the water supply is a problem of pressing need. Some fine morning the country will awake to the position and realise what it has lost, and will regretfully recognise the cause of the loss. Those causes are now in full operation, and he who runs may read the effect which is becoming increasingly manifest.

The water-carriage system of our large towns and cities requires many millions of gallons daily, and every day local authorities, egged on by sanitarian faddists, and encouraged by the central authority at Whitehall, are endeavouring to compel the substitution of water closets in the place of every other system now in vogue. Immense quantities of pure water are expended in washing and watering the streets of our towns and in flushing the sewers beneath them. The boilers of the steam engines employed in our manufactures, and in the driving of our dynamos, and upon our railways, are fed with wholesome water which is supplied for these and other industrial uses at rates much lower than the prices charged to the mere householder.

Our system of land drainage has been so improved that in districts where a few years ago many acres would be under water for weeks during the winter or heavy rains, none now collects even during the heaviest storms; before rain has long continued, we may see the increased volume of water in the outfalls and note its progress to the river or stream which conveys it to the sea. The surface water is thus removed or is drawn upon for immediate use, and so deeper wells and borings are being every day found necessary, not merely in the vicinity of our large towns and industrial centres, but in our country villages and rural hamlets. Yet day by day our coal mines are being sunk to greater depths, and to enable these deeper workings to be prosecuted enormous quantities of water are pumped out of the internal reservoirs of the earth and are allowed to run to waste, the only object being to get rid of it as speedily as possible.

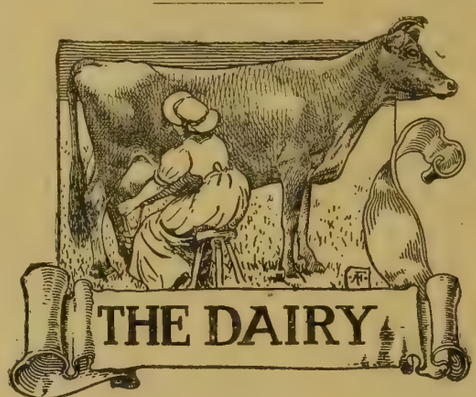
It should be the object of the department charged with the oversight of public health to conserve our water supply, but its energies are more particularly directed to encouraging the townsmen to waste more water, and to compelling country people to incur immense expenditure in obtaining supplies in excess of their requirements. Surely water that is not sufficiently pure and wholesome for drinking and other domestic purposes might be utilised in the flushing of sewers, the supply of engines, and for manufacturing purposes.

The Martinmas hirings are now practically over, and engagements have been concluded at about late rates. Some classes of men have been engaged on slightly lower terms, but plough lads of from fifteen to twenty years of age, a class, the demand for which on the mixed farms of the North is always in excess of the supply, have been engaged at fully the old rates of wages. Men from twenty one to twenty-five have been plentiful, but many of these preferred to take a prolonged holiday and wait until an increased demand for work springs up, rather than accept engagements on lower terms. Stockmen—that is to say, men to wait on cattle and to milk—have been scarce; indeed, the scarcity of such is always a feature, and year by year there seems an increasing aversion to milking.

At these Martinmas hirings only unmarried men are engaged. These men and lads are engaged by the year, and are boarded and lodged in houses of their employers, or in the houses of the married foremen on the farms. Married men are engaged by the week, and such engagements are subject to a week's notice on either side, and these men do the ordinary labouring work of the farm—the hedging, ditching, and often the shepherds and cattlemen are married men. The Martinmas servants are all single men, and young, and are practically all ploughmen or horsemen.

The political situation would be amusing if it were not somewhat bewildering, and it is to some extent monopolising attention. The fiscal problem was bad enough, with the Protectionist Party on one hand, the Free Traders on the other, and between them a middle party, who do not seem to know where they are, and to have even less idea of what they wish to do. The only thing that seems at all certain is that whatever they may tax, they will not put a tax on any foods and even this much is somewhat uncertain a very meagre programme, but sufficient to prove to the farmer that they have no intention of assisting him while they are considering the possibility of doing him some harm. And now the question of Home Rule for Ireland is again raised, and will necessarily tend to confuse the issue before the electors; but that is the only purpose it can serve, for the people of England have made up their mind on that matter, and Home Rule is as dead for all practical purposes as Protection ever was even in the halcyon days of the earlier seventies. M. Y.

December 1, 1905.



Cheese Show and Fair at Preston.

The last Christmas cheese show to be held under the auspices of the Preston Committee took place on Tuesday, when the entries and attendance constituted a record. In future it is anticipated that the show will be held under county auspices, in one of the great centres. Buyers and dealers were present from all parts of the North, and there were 95 lots entered for competition, compared with 65 twelve months ago. The judges' awards were as follows:—Occupiers of farms exceeding 80 statutary acres, not less than 6 cwt. exhibited—1, G. Whittaker, Kirkland Hall; 2, J. Coupe, Goosnargh; 3, J. Briggs, Cuerdale; 4, E. Townson, Bartle; 5, C. Collinson, Catforth; 6, R. Hornby, Ribby Hall; 7, J. Thornton, Cockerham; 8, G. Jolly, Goosenargh. Farms under 80 statutory acres, not less than 4 cwt. exhibited—1, W. H. Pearson, Elswick; 2, W. Sudell, Salwick; 3, J. Rayton, Treales; 4, T. Parkinson, Treales; 5, J. Sanderson, Greenhalgh; 6, J. Knowles, Goosenargh; 7, H. Cooper, Inskip; 8, T. Houghton, Ashton. Loaf Cheese—1, G. Whittaker, Kirkland Hall; 2, E. Barton, Barton; 3, G. Collinson, Catforth. Championship prize for best exhibit in the show—G. Whittaker.

The prize cheeses were subsequently placed under the hammer by Mr. E. G. Hothersall. In the first class the prices realised varied from 73s. to 84s., in the second from 73s. to 94s., while the loaf cheese varied from 85s. to 131s. per cwt.

At the usual cheese fair the pitch consisted of 107 lots, comprising 1,916 cheeses, an increase of 6 lots and 116 cheeses compared with the corresponding fair of last year. There was a brisk demand, and a clearance was rapidly effected at prices showing a slight advance upon those of last year. Cheese of medium quality made 65s. to 68s., and best 68s. to 71s. per cwt., whilst one or two exceptionally choice dairies realised up to 72s. 6d.

EAST ANGLIAN NOTES

Frost, rain, and gales, with intervals of muggy and foggy weather, is the record for the past month, and December opens with such a damp and close atmosphere that weather prophets predict for Smithfield week a real London fog, as known in the olden times. As regards our fields in East Anglia, the hope of a good harvest next year is sustained in our farmers' breasts by the general healthy appearance of the "emerald carpet" that now is gradually extending over our landscape. Beans and wheat are looking their best where sown early, while the mangolds are now off the land and safely secured in clamps.

A fortnight ago a farmers' meeting was held at Great Bardfield, Essex, and on Saturday last another meeting was held in Leaden Roothing to approve of a light railway scheme, entailing an expenditure of a quarter of a million sterling, to open up the rural parts of North Essex, and from the tone of those present at these two meetings, the promoters hope that a considerable development in agriculture will result inasmuch as at present this district is ungetatable. The proposed line will start from Ongar northwards.

In connection with this light railway scheme it is of interest to note that another proposal is on foot to supply farm and dairy produce direct from the Essex producer to the London consumer. This scheme will be discussed at a meeting to be held this week under the chairmanship of Viscount Deerhurst, and we learn that it is proposed to establish depots at Ongar, Dunmow, Braintree, and Chelmsford, where the produce will be bought and collected, and where also, in the case of meat, slaughtering will be done. The county base will be Ongar, whence a motor wagon, it is proposed, should start every morning to collect from the depots, returning in the afternoon, when another and larger motor will proceed with the daily supply to London.

A wide range is noticed in different years in the losses occasioned by insects to farm products due to favourable or unfavourable climatic conditions, and also to the abundance from time to time of natural enemies. The result is more or less periodicity in the occurrence of bad insect year, or, in other words, periods of unusual abundance of particular insect pests are followed by a number of years of comparative scarcity. Further seasons which may be favourable to one insect may prove unfavourable to others, hence there may be not only periodicity in the occurrence of the same insect, but more or less of a rotation of the different insect pests of particular crops.

With the object of preventing the total extinction of owls in East Anglia, Lord Lilford a short time since liberated on his Cambridgeshire estate some fifty specimens of the Strix passerina variety. A number of birds, however, have, we are sorry to state, been killed of late, and his lordship has therefore been obliged to issue an appeal to farmers in the Eastern Counties to protect the birds which, so far from doing any harm to agriculture, are really the farmers' friends, and are of great use in keeping down sparrows, mice, etc.

On account of being of value for certain dyeing processes, hazel pears grown in the Eastern Counties have this year commanded as much as £10 per ton.

At the annual meeting of the Peterborough Agricultural Society the balance-sheet showed the total receipts for the year as £3,475 4s. 7d., and a total loss of £88 4s. The society, however, has a good balance in the bank, and its total assets amount to £1,350. Mr. Leonard Brassey, of Apethorpe Hall, was elected president for the ensuing year, and a vote of thanks was passed to Mr. Gresswell on his retirement after thirty-five years' service as one of the veterinary surgeons of the society.

December 1, 1905.

At the Chester Horse Fair on Thursday the quality and general supply were unsatisfactory. Good cart horses and vanners for town work were in steady request, but other lots were difficult to sell. Prices ranged from £15 to £18 for light horses, and £30 to £60 for cart and waggon horses.

Chesterfield November Fair, held on Tuesday, was well supplied with cattle, and trade was brisk. Best milch cattle made £19 to £23; second sorts, £16 to £19; in-calf cows and heifers, £13 to £18; fat beasts, £13 to £18; matured stores, £10 to £13; two-year-old bulls, £10 to £15; stirks and stores, £8 to £10 10s.; young rough stock, £4 to £7 10s. Sheep were in moderate supply, and met a fairly active trade. Ewes, 42s. to 50s.; hoggs, 28s. to 34s.

Midland Notes.

December is upon us, and the short time of daylight—made shorter now by thick and constantly threatening cloud—reduces opportunities of field work to a minimum. Never was there a better illustration than this season affords of the advantages of doing things in good time. Farmers who made good use of the chances offered by October can look forward cheerfully to the winter; but this month has been almost a lost one in some respects, and from Nottingham, Northants, Stafford, and other parts one hears of land designed for wheat remaining still unsown. Meanwhile the wheat and other autumn-sown crops which were got into the ground in good time are doing capitally, and making a sturdy plant which should be able to withstand the rigour of the severe winter which so many farmers seem inclined to predict. It can be but guess-work, but if we do have a hard and a prolonged winter, it will not be surprising. Nature strikes averages in the long run, and one is assuredly due. All the same, it does not do to jump at conclusions from the fact that we have had a little spell of hard weather already. The old proverb about "ice before Martinmas" has more than a spice of truth in it.

This is poor threshing weather, but threshing has nevertheless been proceeding briskly whenever opportunity has served, for rent audits and cake and other Christmas bills have to be thought of, and the grain must be converted into ready cash—regardless, in too many cases, of the condition of the markets. One hears of a good many six-quarter yields in the grain-growing districts of Notts and the Eastern Midlands, and there is generally nothing much to complain of in the quality of wheat, but it is to be feared there is more than an ordinary percentage of inferior barley, and that samples reaching really good malting quality will be few.

On its smaller scale, the Warwickshire Agricultural Society is finding much the same difficulties in discovering a suitable show site for 1906 as have been experienced in some previous years by the Royal Agricultural Society. Rugby has plainly intimated that its own local society must have first consideration, and the Atherstone District Council, finding similar obstacles in the way of a visit there by reason of its local flower, horse, and agricultural shows, has cautiously determined to give Nuneaton first chance of extending the necessary invitation.

The trouble raises once again the whole question of the relation of county and district shows to one another. The Warwickshire meeting has by no means worn out its welcome at Leamington, Stratford, Coventry, and other places it has visited in recent years, but it would be unfortunate for all concerned to find other portions of the county barred to it. The same difficulty has confronted other Midland shows ere now, and as the small local meetings increase it threatens to become more pronounced. But surely once in a way the visit of the leading county societies must be of benefit to farmers.

Following upon Mr. Sigmund Stein's visit to Kidderminster, which was noted in this column some time ago, the Local Chamber of Commerce has started to consider in earnest the possibilities of developing the beet sugar industry, and this week the Town Council has also appointed a committee—but with an inconveniently wide reference, for it is also "to consider the question of other industries adapted for Kidderminster needs." It must be hoped that sugar beet will not be lost sight of in so large a field.

The news that a sugar factory is actually intended to be started in Lincolnshire has been received with interest in the Midlands, where Lord Denbigh's experiments at Newnham Paddox have shown the possibility of growing beet quite equal in quality to that produced on the Continent. There is a certain feeling, nevertheless, that the crop may have been over-rated—that the airy calculations one hears sometimes may allow too much for the feeding value of the tops and the residual pulp, and not enough for haulage to the factory and the exhausting nature of the crop. These points and others the Kidderminster Committee will have to consider very carefully.

News comes to hand as these lines are written of another destructive farm fire, this time at the Sneyd Farm, Essington, where damage reckoned at £500 is said to have been done before the Wolverhampton fire brigade could reach the spot and extinguish the flames. The difficulty of their task was increased both by the scarcity of water—the common cause of so much loss in farm and country house fires in remote districts—and by the fact that the source of the outbreak was hard to get at, being in the midst of a big crop of corn all stacked in a barn and ready for threshing.

Among the familiar faces missing from the Birmingham fat stock show one noticed with regret that of the honorary treasurer, Mr. Howard P. Ryland; and one was sorry to learn that the illness which kept him away was more serious than has been generally realised. It was said, indeed, that there was little expectation of his being seen again at Bingley Hall. Mr. Ryland is known and respected by agriculturists and stock breeders all over the country, and the deepest sympathy will be felt with him in his affliction.

November 30, 1905.

Field Culture of Potatoes.

The market lecture at the County Laboratories, Chelmsford, on Friday last, was delivered by Mr. Alec Steel, of Prittlewell, on the field culture of the potato. Mr. Steel, at the outset, briefly alluded to the introduction of the potato into this country, observing that it was first used only as food for cattle. Touching upon the chemical constituents of the potato, he pointed out that from these they could not expect great muscle power to grow out of it.

He wished to deal with the question from his personal experience of growing for market purposes. The most important factor was to secure a plant fresh and full of internal vigour and family life. They should get the seed from a distant district. The conditions of irregular growth did not prevail where the plants grew year by year to type, and retained the full vigour of youth. Then the first, and perhaps the most important, element in potato growing was assured.

He had only been able to discover three varieties—the early, mid-early, and main crop—that were quite enough for their purpose. Potatoes were fond of virgin soil, and never throve better than on freshly broken up lea. But in Essex, owing to the ravages of the wireworm, they were generally grown from the corn stubble, which was a fair preparation. There should be deep cultivation, with fresh soil, before planting and plenty of harrowing and horse-hoeing after, and moulding the earth close up to the stems before they bloomed, to prevent green tubers. He advocated the application of stable or farmyard manure, with the addition of lime, superphosphate, and sulphate of potash.

The Chairman (Mr. H. Rankin), who is a large grower of potatoes, said that some of the points to bear in mind were to get the dung on the land in good time—as early as possible, and, if possible, use peat manure, to get the land in good order, and to be very careful about the selection of seed.

Barley Exhibition at Stowmarket.

The annual barley competition promoted by Messrs. Prentice took place on Friday at their Chemical Works, Stowmarket, and proved a most interesting event. Messrs. Prentice commenced this competition a great many years ago to induce agriculturists to give more earnest attention to the growth of the best malting barleys fit for the Burton Breweries, and to use such fertilisers to their soils as would produce the finest quality barleys, which our East Anglian soils are so admittedly capable of growing. The prizes given by Messrs. Prentice, amounting in all districts to about £100, are intended to facilitate a healthy spirit of competition amongst their customers, who are users of Prentice's celebrated Champion Barley Fertiliser, and to recoup the fortunate growers of the best samples for their necessarily additional care and trouble over their barley crop. Messrs. Prentice have paid very particular attention to barley fertilisation, and for many years past have made most exhaustive experiments, so as to produce a fertiliser just suitable to this particular plant. The result of their trials is the Champion Barley Manure they are at present manufacturing, and they claim that this is one of the most useful and least expensive fertilisers that to-day can be used by barley-growers.

A very large number of samples were entered for this year's barley competition, and a finer assortment could not possibly be shown. The judges were Mr. W. W. Pallett, of North Walsham, and Mr. Ernest Cross, of Norwich, two of the largest buyers of malting barley in the Eastern Counties. These gentlemen had a most difficult task in adjudicating the eventual winners. They spoke in very flattering terms of the excellent assortment of samples, and Messrs. Prentice were congratulated all round on having received so marked a testimony of the value of their Champion Fertiliser, from which all these were grown.

The awards were as follows:—1st prize, £20, Mr. W. M. Lawson, Bedingfield.

2nd prize, £15, Mr. Alfred Woods, Occold.

3rd prize, £10, Mr. J. A. Lankester, Old Newton.

Several county awards will be judged early in the New Year, particulars of which will be published later, as these form a separate competition from that specially arranged for the Eastern Counties. The prize-winning samples will be exhibited at Messrs. Prentice's stand, Smithfield Club Show, Islington, this week.

Hunters and Farmers.

The members of the Warwickshire Hunt have taken an important step with regard to farmers in their country by establishing a Farmers' Benevolent Fund to alleviate cases of distress amongst tenant farmers within the limits of the hunt. Those who follow hounds and are not farmers will be asked to give a stated sum to the fund. The members of the Hunt have agreed to give from their private funds an annual subscription of 100 guineas to the Royal Agricultural Benevolent Institution, and the Hunt will give grants of money to farmers in distressed circumstances who are not eligible for pensions from the latter institution.

Hiring Fairs.

Bridlington.

The annual hirings at Bridlington were held on November 25, and were well attended by masters and servants. There was a fair number of engagements made, the wages given being similar to those of last year, viz.:—Foremen, £24 to £28; shepherds, £20 to £26; herdsmen, £16 to £22; waggoners, £18 to £23; third lads, £13 to £16; and boys to plough, £7 to £13.

Chesterfield.

There was a keen demand at the Chesterfield hirings (held on Saturday week) for yearly farm servants, and wages tended upwards. Experienced men commanded £20 to £25; ploughmen and waggoners, £16 to £18; second ditto, £12 to £14; and boys, first year out, £6 to £8. Female servants were hardly obtainable.

Dumfries.

At the Martinmas Hiring Fair at Dumfries on Wednesday there was a brisk demand for women, but the rates for young ploughmen and boys showed a tendency to decline. Current wages were as follows:—Young ploughmen, £8 to £10; byre women, £9 10s. to £11; kitchen girls, £8 to £10, and up to £11 for those able to milk; boys, £7 10s. to £8, all for the half-year.

Howden.

The cold and wet weather which prevailed at Howden interfered with the second hirings there on Thursday. There was a good attendance of servants, especially males, but the presence of employers was only meagre, and business was limited. For best hands in domestic service prices ranged from £16 to £23; ordinary servants, £15 to £18; young girls, £11 to £13; farm foremen, £20 to £28; second hands, £16 to £20; lads able to follow the plough, £8 to £10 and £12 per annum.

Malton.

There was a large attendance at the Malton annual hirings held on November 25, the town being crowded all day with servants. The best demand was for strong youths who could plough and young lads, and these promptly commanded the wages of last year; strong men were to be had for less money, and the wages of female servants were generally well maintained all round. Good foremen and managing hinds received to £30 per year, second rate £24 to £26; head waggoners £17 to £19, strong youths £14 to £17, and lads £7 to £9 per annum. Domestics hired at £18 to £20 for good cooks, housemaids £14 to £16, generals £10 to £15, and young girls from £8 per annum. Strong managing girls for the farmhouse £15 to £18.

The annual dinner of the Farmers' Protection Association, Darlington (Head Centre), will be held on Friday, February 2, at the King's Head Hotel. The Right Hon. A. E. Fellowes, M.P., President of the Board of Agriculture, has consented to be present.

Future of the Royal Agricultural Hall.

SIR,—In view of the persistent rumours which are now being circulated to the effect that the Royal Agricultural Hall has been secured by the London County Council in connection with its tramway system in this district, I should feel greatly obliged if you would kindly permit me, through the medium of your paper, to say that such rumours are very misleading and totally devoid of truth.

I feel that it is due to the promoters of the many exhibitions in this hall, and to the very large section of the public who attend them, to do all in my power to contradict these mischievous statements.—I am, your obedient servant,

GARRETT TAYLOR,
Managing Director, Royal Agricultural Hall Co., Ltd.

November 28, 1905.

Forced from the Land.

SIR,—As one interested in the solution of how best to get the people back again on to the land from which they have been forced by various depressing circumstances over which they had no control, may I very earnestly and respectfully ask you to give me your candid experiences and valued opinions as to the wisdom and utility of large farms of 1,000, 1,500, 2,000, 3,000, as compared to good workable farms of from 200, 250, or 300 acres at the very outside. Farms (on good land) of 200 to 300 acres each are quite large enough for any one to cultivate thoroughly. As a close observer of many years' standing, my humble opinion is that it would be far better for landowners, their tenant-farmers, and agricultural labourers, and tradesmen locally, and, in fact, the whole community at large, if all large farms were split up into 200, 250 and 300 acres each. They would be far better looked after, and more thoroughly cultivated, and more horses and farm labour would be used, and there would be far less risk of landowners losing their rents than in the case of large farmers renting 1,000, 1,500, 2,000 or 3,000 acres, as many of the large farmers are simply backed up financially by their local bankers, brewers, maltsters, and corn merchants, etc. Any extra expenses in building extra farm buildings and new farm houses could be easily got over by having model co-operative dairy factories, where they could daily send their milk to be blended together and made into butter, cheese, cream; and also co-operative stores to deal with their other products, eggs, poultry, and grain of all kinds. Loans for building new farm premises can be had at £4 16s. 11d. per centum per annum, the cost being spread over forty years on good settled entailed estates. —I am, my dear sir, yours very respectfully,

WM. MORLEY ALDERSON, F.H.R.S., of U.S.A.
(Hon. Fellow of the Institute of Bankers of New York and U.S.A.).

1, Avondale Villa,
Queen's Road, Fakenham, Norfolk,
and 18, Argyle Square, London, W.C.
Nov. 29, 1905.

P.S.—I am sending a copy of this to all the principal landed nobility and gentry in the United Kingdom, asking their views. Mr. Chamberlain proposes a 2s. tax on wheat and flour as import duty. I would allow all raw products in an unmanufactured state to come in duty free if to be made up and manufactured for home and export trade. Any made-up and manufactured goods dry, or as butter, cheese, meat, eggs, poultry, which would likely to come into acute, keen, cut-throat competition with our own products, grown or made in United Kingdom I would tax slightly. I would also give a bonus of 2s. so as to encourage our own farmers at home to grow more wheat than they do at present, simply because wheat does not pay them so well now as oats, barley, and other root crops do.

Rural Education.

SIR, I have been expecting some one before this to have taken up the question of a separate system of teaching for our country children. Briefly, my plan is this:—

No child under nine years old to be taken away from home to be confined in school and compelled to suffer, as they do now, through being denied free access to the cupboard, free range of sight, and a chance to expand their lungs.

The children to be taught by visiting teachers, provided separate from the schools, assisted by the natural parents.

From nine to twelve to be kept regular to school (health permitting); twelve to fourteen, for us to decide—which is quick enough: to be retained at home with us to learn the many trades belonging to husbandry.

The speeches of Lord Heneage, Mr. E. B. Barnard, Mr. F. Street, together with the admission of Mr. Dymond, all point to the need of a separate system. I have not time to go fully into the subject now, so ask you to put this into the waste-paper basket.—Yours truly,

S. DUTTON.

Wash-Hall,
Little Langhall, near Chester.

Voting for the Royal Council—All or None.

SIR,—Mr. J. J. Cridlan has referred to the iniquitous bye-law or regulation which appears to be in force in the election of members of the Council of the Royal Agricultural Society of England, that each member voting shall be compelled to vote for as many candidates as there are vacancies.

Very many persons strongly object to being thus disfranchised in order, as it is stated, to prevent a certain number of members exercising their perfect right to vote only for just those candidates whom they think will best represent their views in the Council and in the management of the Society to whose funds they contribute for a special purpose.

When a very large proportion of the members have shown their disgust by refusing to vote, and thus are not forced into voting for candidates of whom they know nothing or of whom they disapprove, they are inclined to believe that they have probed this festering sore to the bottom.

Let us spend a few minutes in the probable working of this regulation. For argument's sake, we will take an electorate of 500 members, with five candidates for four vacancies. Most probably three of these candidates will be really good men, and two of them mere place-seekers or men who dearly love a good dinner. As a rule, not more than four-fifths of the members will trouble to vote, especially under such conditions as are said to be in force. Of these, say five-eighths, or some 250 votes, will be cast for each of the three good men; the two useless candidates would then each get about 150 votes, as well as half (or 125) of the votes, which must be given to one or other of them by the 250 members who have already voted for the good men which they wish to elect.

Now mark the results. The two—to put it mildly—less useful men would both get elected, as each would receive 275 votes, whilst one of the trio would be rejected as unfit to act on the Council; then, in a division, the two diners-out would follow the lead given to them by their host, whilst the two independents would vote for the good of the greatest number. Thus the whole of the members in this particular district would be disfranchised when a question which by any means could be converted into a personal matter came to be determined by vote.

I confess that I know not what advantages are claimed for this most unjust bye-law, but I do know that the results are deplorable.

SANDERS SPENCER.

November 30, 1905.

South Dorsetshire Outlook.

SIR,—We have had some welcome rain of late. Many of the wells were getting very short of water, and, indeed, all the crops required it. There has been very little growth this past autumn. I never remember such dry conditions lasting on after harvest, and so long in the autumn, which somewhat retarded Spring catch crops and wheat sowing. Consequently, many of them are backward owing to the seed lying in the ground so long before there was sufficient moisture for it to grow. It was a splendid time for cleaning foul stubbles.

Wheat proves by the threshing machine to be the crop of the season, although this does not yield as well as many expected. Barley is very disappointing in quality; most of it is threshed, and not many lots good enough for the best brewers. Oats are light and an indifferent yield. I fancy they will be worth more money as Spring sowing approaches.

The early sown roots after fallow are good, but those after catch crops are very patchy and poor. There seems to have been no life or growth in them. Mangolds were somewhat hindered in clamping by the severe frosts in October, but where they were allowed to recover, have not, I think, received any harm.

Sheep are healthy and have been doing well through the fine weather, and we are hoping for a good crop of lambs (our sheet anchor in this part of Dorset), although the keep for the Spring if we get a hard winter, does not look cheering.

Store cattle, with a plentiful supply of good hay, are holding their own, although there is very little old grass for them to browse over.

Nov. 30, 1905. H. S.

Essex.

SIR, The weather during November has been very changeable here. A fair amount of rain has fallen on some days, and several sharp frosts have occurred, with the result that the wheats are coming up very slowly. They were sown late on account of the ground being too dry to admit of drilling till November came in.

The land is being ploughed up for the winter in very nice condition, and, as all roots have been carted off the fields without any injury by the cart wheels having been done, the prospect for good seedbeds for the spring corn is all right.

Roots, with the exception of mangolds, are a very poor crop in this district. The turnips were very late sown; while September and October being too dry and the temperature too low, they did not make much autumn growth.

D. ABBOTT GREEN.

December 1, 1905.

Farming Outlook in North Wilts.

SIR,—The recent heavy rains have generally been welcomed by agriculturists, as the water supply in most districts had begun to cause anxiety. The autumn-sown corn has also benefited, for the dryness of September and October, though good for planting operations, was not so suitable for the newly-sown seed. Work is well forward, and the land has, to a great extent, been cleansed of the foul state into which it fell during the wet years of 1902 and 1903.

The cattle trade is extremely bad, which is certainly not warranted by the prevailing price of hay. Probably the chief reasons are the fall in the value of milk and beef, the great increase of stock, as shown by the agricultural returns, and—most potent of all—the shortness of money. Where milk can be sold, and hay and straw can go off, farms are taken with a small amount of capital, and that is sometimes borrowed.

Consequently, many farmers are always in a state of financial embarrassment. With low prices, high rates, and expensive labour, it is most difficult for these to keep the cart upon the wheels, and if such barren years as the early nineties were again experienced, many farms would become vacant, and rents would undergo a further fall. R. P.

December 1, 1905.

Agricultural Prospects in Kent.

SIR,—Agricultural prospects in this district are not over flourishing after a very dry October, when it was hardly possible to plough some lands, we have had a wet November, and, when it did not rain, sharp frosts were experienced. Wheat season is very backward about here, and unless we have a dry period at once, the acreage must be very short.

Most of the mangold has been secured in good condition, though a few pieces were exposed to the frost, which could not have done them any good. Potato clamps are keeping badly, and several have to be sorted over, as they are "dropping in," in which case blight has caused much havoc. There is no doubt they must be dearer in the spring.

There is still a fair bite for the flocks on the pastures, which is very fortunate, as winter keep was never much shorter about here. Mustard is good, and the frosts, so far, have not cut it down; when this is finished, the bulk of the feed has gone.

The corn crops, as a rule, come out short of expectation, and, what with present prices, and the dead loss on the hop crop, this year will have to be reckoned as one of the lean ones for Kent.

November 30, 1905. W. S.

Crops in Devon.

SIR, The past season has been a very poor one for the agriculturist. The grass land has not grown near as much grass as last year owing to a cold, dry spring. Crops have also been very light; corn, especially, is gone in very small, and a lot damaged by the rain. We had a very trying time with both corn and hay harvest, a lot of both being spoilt; and now a good bit of the corn has been thrashed, and has yielded very light—that accounts for the price advancing. There is every likes of feeding stuffs being very dear, as very few farmers have sufficient for their own use. Roots are also very scarce. Owing to dry weather at tilling time a good many farmers had to sow their ground a second time for both mangolds and turnips, and a good many places wireworms played havoc. This seems to be an increasing complaint; it appears that at present there is nothing to destroy the destructive things.

Some have tried different remedies, but nothing seems to kill nor drive them away permanently. Salt seems to check them for a little while, but the best thing that seems to answer is to till the ground affected in mustard, and, instead of stocking it, plough it in, and it will be some time before wireworms will make their appearance again. What punishes the farmer most is the high rent, rates, and taxes; but I don't know who they can blame, as most farms now are let by tender, therefore they have it their own price—at which is too often too high, and it is useless to ask for abatement of rent, because if there is a farm to let there is twenty or more want it, so they are crushing one another instead of forming some kind of union as some trades do, then their time would be much brighter than it is at present. J. H.

November 30, 1905.

Weather and Crop in South Hants.

SIR,—Owing to the dry and unusually cold October, the wheat crop this season has not been sown under the most favourable circumstances, especially with regard to the clover leys on the strong land, which is looking very backward in consequence; but, after rape and turnips, the crop is looking quite strong and even, and has much improved during the mild weather of the past week. The acreage sown (which is now practically finished) is quite up to the average.

Beans and winter oats look very promising, and quite forward enough for the time of year. Vetches and early sheep feed not so forward as at this time last year.

Sheep are doing well, with a plentiful supply of roots. Store sheep easier in price, fat sheep making good prices.

The ploughing and cleaning of stubbles, etc., are in a more forward state than for many years past.

The corn trade is firm, with an upward tendency for wheat and oats, the latter of which thrash out very disappointingly, and the former not quite up to expectations. With hay and straw selling at ruinous prices, the farmer must turn his attention to the raising of stock, which, however, is not very encouraging, as store cattle is a very dull trade. W. F. M.

December 1, 1905.

Crops in Somerset.

SIR,—The weather has been very wet during the past week, and in the previous week we had frost and a little snow, but it is bright and clear now. The weather in the autumn was very fine; there is very little wheat grown in this district, but what is is looking well. Swedes, turnips, and mangolds are an average crop, but on some farms turnips are considerably damaged by finger-and-toe.

Oats are a light crop, and the greater part light in weight. Fat and store sheep have been selling well all through the autumn, but beef (especially cow beef) has been selling badly, and the prospect for the sale of store cattle is not good.

December 1, 1905. A. S. LOVELACE.

FOREIGN CROP PROSPECTS.

FRANCE.—Weather conditions generally may be described as changeable, with a preponderance to wet. In some parts fields of wheat were reported to be under water, and in others from the same cause it has been found impossible to terminate the harvesting of potatoes. Farmers are desirous of the advent of dry weather to allow of sowings being completed, although the delay occasioned by flooding has been turned to good account in getting through with more threshing.

GERMANY. From the official report of the crops in the German Empire, recently issued, it appears that owing to bad weather many of the winter crops suffered badly. In consequence of the late sowing and unfavourable weather for germination, the condition of a large portion of the young crop was not yet ascertainable. However, a definite statement has been made that autumn-sown crops are lacking in appearance, and, with regard to potatoes, where the quantity was large, complaints existed as to rot.

ITALY. Sowings throughout the whole of the peninsular, excepting the extreme South, have been retarded during the second half of November by persistent rains. The young crops are reported as germinating well in Upper and Central Italy, but it is feared now that the excessive moisture will cause damage. The olive harvest is satisfactory both in quality and quantity.

RUSSIA. From the report of the Chief Department of Agriculture the condition of autumn sowings presented recently a gratifying aspect in the majority of districts. The whole of Europe in Russia. The area considerably increased unsown in the Government of Bessarabia and the district of Lower, and advices from other parts in the South mentioned the appearance of the worm pest in autumn-sown cereals, the crops had been exterminated by the rains, and no material damage was reported.

NORTH AFRICA. Advices of recent date from Tunis state that the temperature has been quite abnormal, a condition which is prejudicial to the fields. Farmers and natives alike are desirous of rain, and moisture is badly needed. Some farmers have sown their wheat, and reports from Kef say that the agricultural outlook is very encouraging. Barley crops are beginning to sprout.

UNITED STATES. Favourable weather in the wheat belt was reported early in the week, but later mention was made of predictions of a cold wave from the south-west, and farmers being concerned for the young wheat.

ARGENTINA. Information from up-country with respect to the crops may be regarded as satisfactory, notwithstanding that in some districts the wheat crop has suffered from heavy rains.

INDIA. From Lahore, on the 27th ult., information was cabled that following the failure of the unirrigated autumn crops in the Punjab anxiety was felt for the ensuing spring crops, which urgently needed rain. Bombay cables report slight rains in the Berar Provinces. The weekly telegram concerning crop prospects from the Viceroy, dated November 28, states that no rain had fallen in the United Provinces and Rajputana. In Central India prospects were generally fair, except in Bundelkhand, where crops were withering. No rain in Bombay, and the same as Hyderabad, but the situation was not serious. The general prospects were satisfactory at Madras, and in other Provinces fair or good.—*Dornbusch.*

By Lupulin.

Happenings at Home and Abroad.

England.

Occasional visits to Borough offices this week show me that the trade is slackening off as regards volume, but I am glad to hear of improvement in values sufficiently marked to be worthy of note. This has not been created so much by continuation of demand, as by diminution of supply. The early anxiety of growers to sell offered such inducements to buyers that a rush of orders came in, which were so willingly responded to that by the end of October an unprecedented quantity of hops had been disposed of. The activity remained during the first fortnight of last month, when the reduction of growers' holdings began to be felt, and although buyers are still willing to operate at former prices, the position is now changed. A firm tone has replaced the previous panic, and the few holders who have been bold enough to stem the tide have a good prospect of a fairly substantial reward. The advance of prices is most evident in the lower qualities, as choice lots are few and far between, and 35s. to 40s. are now readily paid for hops that a month ago were obtainable at 25s. to 30s. It appears probable that higher figures will he heard of before the close of the year, although it must be remembered that, as soon as the quotations for English produce reach a point at which importation is profitable, American and Continental shippers will be likely to operate, as large quantities are waiting their opportunity. Therefore we can hardly expect that our values will be allowed to advance much further, and it appears desirable that our English holders should watch the course of the market very closely, so that they may avoid the annoyance of being left in the cold. A good many yearlings have been sold at low rates, but I am glad to know that some are still in hand being held for better prices, that I sincerely hope may be realised.

Much satisfaction has been experienced this week by the reappearance in the Borough of our highly respected veteran, Mr. H. Jones. His serious and prolonged illness, the result of a severe operation, has aroused the sympathy of every member of the trade and of all his numerous country friends. I am personally thankful to have been permitted to shake hands with our dear old friend the other day, and to congratulate him upon his convalescence, which I heartily trust may be permanent.

America.

Growers are much disgusted by the condition of the markets, and declare that there is neither "rhyme nor reason" to account for it. Being asked to hand over their hops at prices that do not pay for the outlay incurred to put them in bales, planters are naturally asking "why this thusness?" But so long as panic rules them arguments are useless. The Oregon men have beseiged the offices of buyers, and surrendered themselves and their produce without hesitation at prices ranging from 7½ to 12 cents. The principal business seems to have been done at about 9½ cents. This depression is doubtless largely due to the scarcity of choice samples, and to the low average of quality which characterises the 1905 crop of the Pacific States. But there is some hope that "bed rock" has been touched, and that recovery of values will be gradually developed. In New York State the position is rather more favourable, from 18 to 20 cents being paid for lots having any claim to quality, and the quotation in the New York City market remains fairly firm at 20 to 22 cents for prime to choice, and 13 to 16 cents for common to fair sorts.

Germany.

The business of the past fortnight has been very quiet, consequently prices of ordinary and low qualities have not only fallen during the interval, but the tendency remains with similar indications for the immediate future. Consumers appear to have provided for their requirements, as their operations are gradually, but certainly, lessening. The demand for export is at present small, and is principally directed towards the lowest priced lots, several transactions having taken place at 18s. to 24. for yellow and brown qualities, and at 30s. to 40s. for better colousr. Arrivals are constantly exceeding sales, the increase of stock therefore creates some uneasiness, and holders are becoming anxious to reduce their responsibilities. There is, however, an appearance of firmness in the higher grades, although their current values are somewhat reduced from the figures of a month ago. For instance, scaled Hallertans stand at 55s. to 75s., selected Spalts at 75s. to 80s., while other choice growths of Wurtemberg, Baden, Alsace, etc., range from 65s to 75s. The present outlook is, nevertheless far from encouraging to sellers.

The general trend towards lower values is also shown by the currency at the great brewery centre Munich, where the following quotations are recently given in the official returns:—Certified Hallertans, 115s. to 120s.; Spalts, 120s.; Saaz (Bohemia), 140s. to 155s. The sales for the week ending November 17 were very unimportant, and in the following week no sales were made.

France.

The market at Dijon (Burgundy) has been quiet, with very limited business during November. The whole of the choice qualities have been disposed of, the balance of the crop remaining (estimated at about 20 per cent.) being entirely of the inferior class. The best of these are obtainable at 40 to 45 francs, and samples deficient in colour at 30 to 35 francs.

Belgium.

General calmness prevails in both town and country markets. The greater part of the growers have cleared out in Alost, where dealers are willing to sell at 45 to 47 francs. Poperinghe growers are not asking more than 30 francs, and have some difficulty in finding buyers.

Redhill Show.

The annual show of the Redhill Agricultural Society took place last week, the total entries numbering over 900. Additional attraction was given to the show in that the champion beasts of Chichester, Horsham, and Tonbridge shows were exhibited. The judges awarded the championship to Mr. G. J. Stanford, of Worthing Road, Horsham. There was a very fine collection of sheep; in fact, far better than there has been for several years, more especially of Southdowns. There was exceptionally keen competition in the class for a pen of three wether sheep between Mrs. Montefiore, of Worth Park, and the Duke of Devonshire, the former taking the prize with a pen which gained the championship at Tonbridge.

Bruff, co. Limerick, November 28.—Large fair, and, with a good attendance of buyers, demand was fairly active, a good all-round clearance being effected. Calves, 1st class £5 to £5 10s., 2nd class £3 5s. to £4 10s.; yearlings, 1st class £8 5s. to £9 7s. 6d., 2nd class £6 to £8; two-years-old, 1st class £11 10s. to £13 10s., 2nd class £8 10s. to £11 2s. 6d.; springers, 1st class £16 to £17 10s., 2nd class £11 10s. to £14 10s. Young pigs 8 to 10 weeks old were in fair demand at from 20s. to 25s. each.

CORN MARKETS.

LONDON.

Mark Lane, Wednesday.—The general tone varied but slightly from that of Monday, trade in most cereals, however, moving slowly. English wheat in moderate supply is held for steady prices. Whites, delivered up, quoted 30s to 34s; and red, 29s to 33s per qr. Imported wheat slow, and tendency of prices in buyers' favour. No. 1 Northern Manitoba, 34s ex ship; Australian, ex store, 34s to 34s 6d; Russian, as to sample, 32s to 35s 6d per qr. Flour market steady: No. 1 town households, 27s delivered in; Iron Duke, 22s 6d; country patents, 25s to 27s per sack. Grinding barley dull; Azoff, 20s ex quay. English malting is held steadily. Imported oats were in slow support; 38lb. Russian 16s 3d to 16s 9d, ex quay, as to sample. Maize firm; American, old, 25s to 25s 6d; and sound La Plata, 25s landed terms.

Mark Lane, Friday. — Attendance was poor, and trading generally of a retail character, but with a firm tone throughout. English wheats were maintained in value, while foreign grades ruled firm, with Americans held for an advance; No. 1 Northern Manitoba ex ship quoted at 34s 3d. Maize firm, with mixed American rather dearer; for La Plata landed 24s 9d is wanted, and 24s 3d for ex ship; mixed American ex quay is held for 25s 6d and new crop ex ship for 23s 3d. Barley firm at 20s 3d for Odessa Nicolaieff landed, and 9d ex ship. Flour quiet at late rates. Oats held for 3d advance; 38lb. Russian offered at 16s 6d to 16s 9d.

COUNTRY.

Ashford, Tuesday.—Wheats out of condition were neglected, and prices were low, though irregular; for fair samples there was no alteration, and business was conducted between 28s and 30s a quarter. Malting barley made 27s to 30s; oats, 17s to 21s; Mazagan beans, 28s; tick beans, 31s to 32s; maize, 27s to 28s; foreign grinding barley, 23s to 24s; and peas, 29s to 30s per quarter. Flour: Whites, 31s; seconds, 28s; scaling, 26s per sack.

Banbury, Thursday.—Wheat, red, new, 28s to 28s; barley, 24s to 30s; beans, new, 26s to 30s; beans, old, 33s to 36s; oats, 17s to 21s; oats, old, 20s to 24s; peas, 27s to 30s per qr.

Berwick, Saturday. — Good attendance. Prices of wheat and barley unchanged. Oats dull sale, except for finest qualities. Wheat, 28s to 29s; barley, 24s 6d to 29s; oats, 17s 6d to 21s.

Birmingham, Thursday.—There was a large attendance, and business was considerably more brisk than for several weeks past. Foreign wheats met with a good demand at the following quotations:—River Plate, 32s 9d to 33s 6d per qr. (496lb.) at Sharpness. Russian 32s 9d to 33s 6d at Sharpness, Indian 32s 9d at Gloucester. Plate maize rather easy at 24s 3d to 24s 6d per qr. (480lb.) at Sharpness; flat maize unchanged at 24s 6d at Bristol. Grinding barley was 6d lower at 20s 6d per 400lb. at Sharpness. English wheats were rather scarce, and made up to 30s per qr. (496lb.) delivered Birmingham. Oats and beans at late rates.

Brighton, Thursday. — Small attendance and slow trade at last week's prices. Wheat in short supply. Barley, 28s to 33s; grinding ditto, 21s to 23s; oats, English, 17s to 20s; peas, 28s to 29s; beans, 30s to 31s.

Bristol, Thursday.—There was not a large attendance on our market to-day. English wheat in smaller supply at about late prices. Foreign unchanged. Round maize 3d lower. Flat maize, unaltered. Barley, 6d decline. Oats, unaltered. Flour, firm at recent rates.—GRACE BROTHERS.

Bury St. Edmunds, Wednesday. — Wheat: The supply was only an average one, but the trade was weak in tone, although there was not much change in prices; reds or whites, 29s to 30s; revets, 28s to 29s per qr. Barley: Supply moderate, with a quiet but steady demand for useful malting parcels, at 27s to 32s per qr. Maize steady for spot delivery at 26s to 26s 6d for flat, and 26s for round; weak for forward delivery. Other feeding corns firm.

Cambridge, Saturday.—The wheat trade has been inactive during the week. The condition of many samples is not so good, and buyers are more indifferent. There was a moderate show of wheat; trade was very slow, and occasionally the turn against sellers. Red wheat, 29s to 31s, and white up to 31s per 504lb. Barley quite as dear. Beans and oats very firm.

Canterbury, Saturday.—Wheat values firm at from 29s up to 32s for 65lb. lots. Barley a quiet demand, malting samples being worth from 28s to 31s, and grinding, 23s to 25s. Oats and beans are rather dearer, the former selling up to 23s, and choice samples of ticks up to 33s 6d.

Carlisle, Saturday. — Large supply of oats in our market to-day; good demand at 6d per qr. less money; 17s 6d to 19s per 336lb.—THOMAS ROBINSON.

Chichester, Wednesday.—Very small attendance and little grain on offer. New white wheat, 33s to 34s; new red ditto, 30s to 30s 6d; barley, 28s to 32s; grinding ditto, 21s to 21s 6d; oats, English, 17s to 21s; peas, 29s to 30s; beans, 31s to 32s; maize, 25s to 26s; flour, 25s to 27s.

Chester, Saturday.—The general demand was slow. American maize was lower than last market day, and wheat was easier. Oats continue firm. Quotations: Wheat, red and white, 4s 3d to 4s 6d per 75lb.; grinding barley, 3s to 3s 2d per 64lb.; beans, old, 5s 9d to 6s per 80lb.; oats, new, 2s 3d to 2s 7d; ditto old, 3s 3d to 3s 6d per 46lb.; Indian corn, old, 13s to 13s 3d; River Plate, new, 12s 9d to 13s per 240lb.

Colchester, Saturday.—Very moderate supply; wheat steady trade at fully last week's prices. The quantity of malting barley was not large, and all descriptions sold readily at full prices. Beans and oats very strong.—JOSEPH WILLIS AND SON, LTD.

Coventry, Friday.—A fairly good attendance. Wheat offered freely, and trade a fair one at recent figures. Barley ruled quiet. Peas and beans practically unchanged in value. Quotations: Wheat, old, 11s to 11s 6d per 480lb.; new, 10s 3d to 10s 9d per 480lb.; barley, 27s to 29s per 448lb.; peas, 11s 6d to 14s per 196lb.; beans, old, 11s 6d to 13s per 196lb.; new, 11s 9d to 12s 6d per 196lb.; oats, old, 23s to 25s per 352lb.; new, 19s to 23s per 352lb.

Derby, Friday. — No change in either the supply, demand, or value of wheat. Spring corn firm on late rates. New white wheat, 30s to 34s; red, 28s to 30s; malting barley, 26s to 28s; old beans, 34s to 36s; new, 32s to 34s. Old oats, 23s to 24s; new, 19s to 20s.

Devizes, Thursday. — There was a moderate supply of corn. The trade for wheat was slow, and inferior qualities sold at rather lower prices. Other corn no alteration. The following were the quotations: New wheat, 14s 6d to 15s; secondary, 12s to 14s; best barley, 26s to 32s 6d; secondary, 20s to 24s; rye, 22s to 24s; old black oats, 20s to 25s; new ditto, 16s 6d to 19s; malting barley, 25s to 32s; beans, 16s to 18s; fine flour, 24s to 26s; extra fine, 27s to 30s.

Doncaster, Saturday.—Only a small supply of English wheat, and moderate demand. Last week's prices were repeated up to 11s 6d per load. Steady trade for foreign wheat, and prices unchanged. Fine oats were firm at late rates. Slow sale for barley, and no improvement in prices. Beans 6d per quarter dearer. Other things unchanged.

Dorchester, Saturday.—The attendance, as well as the supply, was somewhat affected by the miserable weather prevailing, the whole countryside round being enveloped all the earlier part of the day in a dense fog, which cleared somewhat towards the afternoon. Samples did not come to hand particularly well, and a quiet trade was experienced at last week's rates, on which holders declined to make any concessions, and we must quote both English and foreign as practically unchanged from previous market. Malting barley met a very firm trade owing to a shortage of offers; grinding practically unchanged in value. Trade in feeding stuffs generally inactive, but prices are about maintained.

Dublin, Friday. — Wheat, 17s 6d to 19s; malting barley, 14s 6d to 15s 3d; grinding ditto, 12s 9d to 14s; oats, 11s to 12s 6d; oatmeal, extra pinhead, 12s 6d to 14s 6d; flour, 11s to 12s 6d; pollard and bran, 6s to 6s 6d.

Exeter, Friday.—Trade slow. English wheat rather easier; foreign 6d dearer. English barley firm; grinding barley unchanged. Maize rather firmer. Oats steady. Flour unchanged. English wheat, 3s 6d; English barley, 3s 6d to 4s; superfine flour, 25s to 28s; fine, 23s to 25s.

Glasgow, Wednesday. There was the usual attendance at our Corn Exchange to-day. Wheat and flour met a slow sale at prices the turn in buyers' favour. Maize scarce on spot, and held for higher prices. Barley and oats dull. Grinding beans held for 3d. advance. Pease firm. Oatmeal dull, with small demand.—GIBSON AND CLARK.

Glasgow, Friday. Market quiet for wheat; prices unchanged. There is not much business passing in flour; Minneapolis patents are at 25s. net c.i.f., but buyers are not disposed to operate further, as they have flour bought ahead. Mixed American maize quiet at 15s per 280lb. Feeding stuffs generally low, with values unaltered.

Gloucester, Saturday.—There was a small attendance and inactive market. English wheat showed an easier tendency. Foreign was unchanged. Maize and barley were each 3d down. WAITE, JAMES AND CO.

Grantham, Saturday. — An average attendance of farmers and corn factors. Small show of wheat, quotations ranging from 28s 6d to 29s 6d per quarter. Barley was in moderate supply, and sales were effected at 24s to 28s per quarter. A sharp trade in beans at slightly improved prices. Oats and peas firm.

Hereford, Wednesday.—There was an improved attendance, with a slightly better trade. English wheats showed no change, and the same can be said of barleys. Oats were firm; beans little doing. Wholesale quotations: Wheat, 3s 4d to 3s 7d per 62lb.; barley, 3s to 3s 9d per 56lb.; old oats, 2s 6d to 3s per 40lb.; new oats, 2s 2d to 2s 6d per 40lb.; old beans, 4s to 4s 6d per 65½lb.; new beans, 3s 8d to 3s 10d per 65½lb.; vetches, 5s 6d to 6s 6d per 65½lb.

Ipswich, Tuesday.—Wheat was in fair average supply, and with a fairly healthy demand, prices were practically unchanged on the week, at 30s 6d to 31s 3d per 504lb., delivered at Ipswich. Barley in fair supply, with a steady unaltered demand for useful samples, running from 28s to 32s per quarter. Oats steady on the week at 20s to 21s 6d per quarter; old scarce and firm. Maize unchanged, at 25s to 25s 6d per quarter. Grinding barley and other feeding corns all very firm. Linseed cakes firm, at £8 5s to £8 10s per ton. Milling offals firm, at last week's prices.

Leeds, Friday. — There was little doing, either in English or foreign wheats, which showed no change from Tuesday's prices. Malting and feeding barleys were the turn easier. No changes in beans, peas, oats, maize, or flour.

Leicester, Saturday.—Good attendance of buyers and dealers, with limited supplies of home grown wheats, which met a quiet sale. Red wheats, 29s to 30s; white wheats, 30s to 32s per 36 stones; good barley, 25s to 28s per 32 stones; beans, 33s to 35s per 38 stones; oats, 20s to 23s per 26 stones.

Lincoln, Friday.—Moderate show of English wheat, which met with a fair inquiry, at the full prices of last week; a slow trade in barley at unaltered rates. Oats quiet. Beans in request and very firm.

Liverpool, Friday.—Wheat.—There has been only a small attendance at to-day's market, and wheat generally is quiet, with a moderate trade at an occasional ¼d decline; Manitobas are firm, however, at ¼d to 1d advance. Flour.—A very quiet trade at about last Tuesday's prices. Maize.—Mixed is in moderate demand, and prices are occasionally ¼d. dearer. Plate sorts are quiet at ¼d below last Tuesday. European grades quiet, unchanged. Barley.—Malting steady, but there is less inquiry. Feeding quiet without alteration. Beans firm, but quiet; Odessa tending dearer. Peas quiet, rather more offering, but still firm. Oats steady at about late rates, but in very slow demand. Oatmeal very scarce and firmly held at recent figures. Demand quiet. Oilcake.—A quiet trade for American at late prices. English firm with a good demand at an occasional advance. Meal firm at 2s 6d per ton advance.—SEGAR AND TUNNICLIFFE.

Manchester, Thursday.—English and foreign wheat was unchanged, and rather firm, with an upward tendency. Flour was slow and unchanged. Indian corn was about 2d lower for mixed American, and for Plate 1d per cental lower. English and foreign oats were in buyers' favour, but with no quotable change. Barley steady. Peas and beans firm. Bran 3d per load dearer; thirds firm and unchanged.

Newark, Wednesday. — Wheat made a small show, which sold quietly at last week's prices. Barley, oats, and beans were without change in value. Quotations: Wheat, 29s to 30s; barley, 24s to 30s; oats, 18s to 20s; beans, 29s to 31s per qr.

Newcastle-on-Tyne, Saturday. — Wheat at our to-day's market was steadily held for last Saturday's prices. Maize 6d per 480lb. lower on the week; malting barleys quiet and prices easier; oats steady, unchanged in values; beans and peas dearer with a fair demand.—JOSEPH POLLARD AND CO.

Nottingham, Saturday. — With a fair supply of wheat, trade ruled steady at late rates. Barley, but little offering, but sufficient for requirements; values unchanged. Oats and beans in small supply, and prices in sellers' favour.—ROBT. HUBBLE.

Norwich, Saturday.—There was only a small supply of wheat at our market to-day, with a firm trade at last week's quotations. Barley was a slow show, with no quotable change in values. Wheat, red, 30s to 31s per qr.; weight 62lb. per imperial bushel. Corn inspector's return for the week ending November 18, 1905: Wheat, 2,945, 28s 8d; barley, 16,002, 24s 6d. J. A. MILLS.

Oxford, Saturday.—There was a fair attendance, but business was restricted by the limited supplies available. English wheat moved slowly at steady rates, while feeding stuffs were quiet but steady.

Peterborough, Saturday. — A moderate supply of wheat met quiet demand, at same prices last Saturday. Barley firm but slow. Oats fully as dear.—THOMAS HILL AND SON.

Plymouth, Thursday.—There was a very good attendance on Change to-day, but business was fairly quiet. Barley and maize were offered at 3d. cheaper, oats 3d dearer. Wheat was unaltered and quiet.—ORLANDO DAVIS AND CO.

Preston, Saturday.—The tone has been strong and healthy during the week, with wheat values 1½d per cental more. To-day's market was only sparsely attended, and there was no change in prices, supplies being still small. Quotations: Wheat, white, new, per windle of 220lb., 13s to 13s 6d; ditto red, 12s 9d to 13s; oats, new, white, per bushel, 2s 9d to 2s 10½; beans, per windle, 16s to 16s 6d.

Reading, Saturday. — Although there was a fair attendance, there was not a great disposition to trade; those who would have sold set their goods at a high price, and would-be buyers stood off where they could do so, and the result was a slight trade only at following prices:—Wheat, 28s to 31s; barley, 24s to 31s; oats, 16s 6d to 21s 6d.

Retford, Saturday. Good attendance, and a fair supply of grain. In wheat there was no movement, and the business transacted was generally at 29s to 29s 6d per quarter. Malting barley was in fair demand, and useful lots in good condition readily made 26s to 26s 6d; inferior lots to 24s 6d per quarter. Small parcels of grain for feeding purposes changed hands at the currencies of last Saturday; maize making 26s; English beans, 31s; black oats, 17s 6d to 19s; and white ditto, up to 20s per quarter.

Ripon, Thursday.—A dull market and a slow trade. English wheat shows a downward tendency. Prices:—New wheat, 28s to 28s 6d; foreign wheat, 33s to 36s 6d; barley, grinding, 23s to 24s; ditto malting, 25s to 28s; new oats, 18s to 20s; maize, round, 26s to 26s 6d; ditto flat, 25s 6d to 26s 6d per qr.

Romford, Friday. — About an average attendance, business was only moderate, and prices in many instances reduced. Wheats met a dragging market, and made a trifle less than last week, 29s to 30s per quarter. The supply of barley was very limited, and consisted chiefly of inferior samples, and trade was very quiet. Grinding barley, 23s to 26s 6d; malting, to 28s 6d; oats made barely late rates, at 18s to 21s for old, and 21s to 24s for new; peas were firm at 40s to 45s; beans, 29s 6d to 31s per quarter. Maize was firmly held.

Sunderland, Saturday.—Little business passing at this day's market, and there is no change to note in the value of wheat, barley, or oats. Arrivals, coastwise:—Wheat, 700 qrs.; oats, 500 qrs.; foreign, nil.—E. AND F. RICHARDSON.

Tunbridge Wells, Friday.—New white wheat, 32s 6d to 33s; new red ditto, 32s to 32s 6d; barley, 28s to 34s; grinding ditto, 21s to 24s; oats, English, 17s 6d to 21s; rye, 25s to 26s; peas, 32s to 37s; beans, 32s to 37s; tares, 44s to 52s; maize, 26s to 30s.

Warwick, Saturday.—Small supply of wheat, which sells at the extra prices of last week. Not much barley on offer; prices rather higher. Oats and beans scarce and rather dearer. Feeding stuffs unchanged.

Winchester, Saturday.—English wheat firm, and a fair supply; foreign unaltered. Barley 3d cheaper. Oats occasionally 3d advance. Maize unchanged. Flour a dull trade at late rates.—FEAR, COLEBROOK, AND CO., LTD.

Wisbech, Saturday.—Market thinly attended. Wheat meets a slow trade at barely late rates; reds, 30s to 30s 6d. Oats firm, 19s to 21s. Other articles unchanged. —JAMES FLETCHER.

Worksop, Wednesday.—Fair attendance, and good supply of grain, with little variation in price from last week. White wheat 28s to 30s; red wheat, 28s 6d to 28s; best malting barley, 28s to 30s; secondary qualities, 26s 6d to 28s; grinding barley, 22s to 24s; white oats, 17s to 18s 6d; black oats, 16s to 17s; maize, 25s to 27s 6d per qr.

Yeovil, Friday.—Home-grown wheat of best quality sold from 30s 9d to 31s 3d per quarter; secondary, 28s to 29s 9d; foreign, 33s 3d to 36s 3d; malting barley, 31s to 34s 6d; feeding barley, 21s 3d to 23s; foreign, 20s 6d to 21s; beans, 32s to 37s 6d; maize, 24s to 25s 6d; rye, 22s to 23s 6d; oats, black, 18s to 20s 6d; white, 17s to 20s 6d; Irish black, 17s to 17s 9d; rape, 46s to 49s; vetches, 6s to 7s per bushel. A quiet trade in flour, which sold at about last week's rates, fine realising from 24s 6d to 25s; and extra fine, 26s 6d to 27s. Offals and meals in good request at full rates of last week.

York, Saturday.—Very little wheat on offer, and no change in prices. Fine white, 30s to 31s; red and mixed, 29s to 30s per quarter of 36 stones. Malting barley continued dull and a poor demand; fine, 27s to 29s; good, 25s to 27s; ordinary, 23s to 25s per quarter of 32 stones. Oats scarce and dear; white Tartary, 17s to 18s; black, 18s to 19s; white Gartons, 19s to 20s per quarter of 24 stones; rye, 22s 6d to 25s; beans, 30s and 33s per quarter of 36 stones.

FOREIGN

Hamburg, Saturday.—Market rules very firm here, and prices are fully maintained; our maltsters and brewers are buying rather freely any good parcels obtainable at reasonable prices, as they are anxious to have a good stock for next season to commence with, to save the increased or double duty for malting barley, which comes into force on March 1.—FRANCIS M. TH DUHNE.

Hamburg, Saturday.—The weather was changeable; rain, storm, and light frost alternated. At present it is mild. Market quiet in general, but the improved tone in foreign markets caused a firmness, and floating parcels of foreign grain expected to arrive here before the close of river navigation attracted some attention. Since November 1 the import amounted to 37,054 tons wheat, 11,015 tons rye, 42,494 tons barley, 54,900 tons maize, 16,100 tons bran. Fine Red Holstein and Mecklenburg wheat is firmly held at 33s 6d to 34s per 504lb. f.o.b. American Hard Winter No. 2 is quoted at 31s 9d 80 ks; River Plate Russo, 32s 3d; 77 78 ko Rosafe, 31s 6d per 480lb. c.i.f. Rye quiet; 9 15 20 South Russian afloat is offering at 27s to 27s 6d per 480lb. c.i.f. Malting barley firm in value. There continues a good sale for Danish at 30s to 32s per 448lb. c.i.f. Fine Bohemian and Slovakian to arrive per barge is held at 34s 6d to 38s per 448lb. f.o.b.; 60-61 ko Russian feeding is selling at 19s 3d to 19s 6d; American at 18s 6d to 18s 9d per 400lb. c.i.f. Hamburg. Oats firm; white clipped American, 17s to 17s 3d per 320lb. c.i.f. Maize again in better demand. Mixed afloat due is selling at 24s 6d; December shipment at 24s 3d; River Plate afloat at 23s 9d to 24s; March-April, 24s 6d per 480lb. c.i.f. Hamburg.—JOHN TATLOCK.

THE BALTIC.

The market for wheat cargoes is weaker since the close of November. Sales have included Rosario at 30s. 6d. per 480 lb., Bahia Blanca at 30s. 9d. per 480 lb., Russian fine winter at 34s. 6d. per 492 lb., Russian Taganrog at 31s. 9d per 492 lb., Russian f.a. q. Azoff on passage at 32s. 6d. per 492 lb., Kustendje fine new at 32s. per 492 lb., Roumanian f.a.q. at 31s 3d. per 492 lb., Australian new crop for February shipment at 32s. 6d. per 480 lb., Walla Walla at 32s. 6d. per 500 lb., and Red Walla at 31s 6d. per 500 lb.

Maize cargoes are neglected as a rule, but a cargo of Argentine sold on Saturday for 23s 9d. per 480 lb.

Barley cargoes have made 20s. 9d. per 400 lb. for Odessa, 21s. 9d. per 416 lb. for Kustendje, and 28s. per 448 lb. for fine Californian. Although the market it described as weak, it is not to be called depressed, while these rates are realised for grinding and brewing grades respectively.

Cargoes of oats are held for 1s. 6d. per 304 lb. American, 16s. 9d. per 312 lb. Canadian, 17s. 3d. per 304 lb. Black Irish, and 16s. 3d. per 304 lb. Baltic. Buyers are not easy to find at these quotations. On Saturday a cargo of cottonseed arrived from Alexandria and at once sold for £5 12s. 6d. per ton.

The arrivals of grain and seed-laden vessels at ports-of-call for the week were 2 wheat (1 Adelaide, 1 Port Pirie), 1 maize (Rosario). Total 3.

The sailings of grain and seedladen vessels from ports-of-call for the week were 1 wheat (Cardiff) and 1 maize (Antwerp).

Since January 1, 1905, the total arrivals have been 299 wheat, 2 flour, 2 wheat and ots, 1 wheat and linseed 1 flour and wheat, 13 barley and wheat, 10 barley, 12 maize, 1 beans, 4 locust beans, and 52 linseed. Total 397.

Last year during the same time the arrivals were 230 wheat, 1 wheat and maize, 37 barley and wheat, 17 barley, 11 maize, 6 beans, 4 locust beans, 1 rye, 41 linseed, and 1 Canaryseed. Total 399.

East Indian wheat prices, according to the London Corn Trade Association, under Rule No. 4 of the Association East Indian Wheat Contracts, are as follows:—No. 2 Club Calcutta 33s. 6d, Soft Red Calcutta 31s. 9d., Choice White Karachi 33s., all per 492 lb.

No Bombay or Delhi wheat is quotable.

CHEESE.

Newport, Wednesday.—A supply of about seven tons and a brisk demand. Quotations:—Caerphillies, 50s to 59s per cwt.; fancy dairies, 60s to 63s; truckles, 50s to 53s; Derbys, 66s, and Cheddars, 62s to 65s.

Glasgow, Wednesday.—Arrivals of home cheese were smaller, and business was very limited. Holders showed inclination to meet buyers. Cheddars are quoted from 60s to 63s per cwt., and Dunlops 56s to 61s.

BUTTER

Saturday.—Appleby: 1s 2d to 1s 3d. Berwick: 1s 1d to 10d. Bridgnorth: 1s 2d to 1s 3d. Carlisle: 1s 3d. Doncaster: 1s 2d to 1s 3d. Grantham: 1s 2d. Howden: 1s 1d to 1s 3d. Ipswich: 1s to 1s 1d. Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

November was rather wetter and much colder than usual, while 36 hours' bright sunshine is not much more than an hour a day. The autumn-sown wheat looks surprisingly well considering its chilly seedbed. But more rain is decidedly to be dreaded, and a wet, mild December such as at present seems the dominant weather would mean a very poor agricultural start for 1906. Our rain gauge recorded 2,97 inches for November, and the mean warmth was only 42 degrees. Fitzroy and Glassher give the November mean at 43 degrees, and for the last ten years of the 19th century it was 43.2. In 1901 the mean was only 40.8, but 1902 registered 45 degrees, and 1903 45.5 degrees. In 1904 the warmth barely exceeded 42 degrees as a mean, but only 1.47 inches of rain fell, and it is the combination of rain and chill which is so untoward in its souring action upon the soil.

The Russian crop returns published on the 1st inst. were as follows in English weights:—

Wheat	79,285,000 qrs.	of 480lb.
Barley	41,505,000 qrs.	of 400lb.
Oats	98,288,000 qrs.	of 312lb.
Rye	85,779,000 qrs.	of 480lb.
Maize	3,996,000 qrs.	of 480lb.

These are remarkable totals. That of wheat exceeds the preliminary estimate by over 13,000,000 qr. The yield of maize is, on the other hand, much below anticipations, so that another year appears to be before us in which small round corn will be at a decided premium.

The expected change of Government in England causes a certain moderate stringency of money. Nobody is eager to lend on the verge of a General Election. But stocks of grain are not proving as heavy to carry as might be expected, and thus far there has been no sign of inability to bear carrying charges or other indication of a disposition to put stores on an unwilling market. Probably the most weakening element in the situation for wheat is a New York quotation 7s. 2d. per qr. lower from last December. On the other hand, the present price of 32s. 3d. per qr. is not underselling English wheat in London at 30s. 1d., and, so long as New York is dearer than Mark Lane, wheat should be a trade with a strong bottom. The intrinsic milling superiority of the average American over the average English does not exceed the cost of ferrying the grain over, and of landing it on the London quays. Thus the two averages, as they stand, afford a fairly accurate, if rather rough, index of market position generally.

The price of English wheat averages over 30s. per 480 lb. at Reading and at some other markets in the Thames Valley. Good prices are also made locally in Kent and Surrey. Canterbury's good average of 29s. 8d. per 480 lb. equals 31s 3d. per 504 lb., and most East Kent farmers sell by the 63 lb. bushel. In Sussex value is about a shiling lower than in Kent; 28s. 6d. is the Chichester average. Essex, a very important wheat county, quotes 29s. 1d. at Chelmsford. Suffolk quotes 28s. 11d. at Ipswich, and the same price is recorded on liberal sales at Norwich. In the North of England 28s. 2d. is quoted at Doncaster, but there are averages below 28s. in most northern an in all western counties; Salisbury, however, returns 28s. 7d., a good price for the south-west.

The price of English barley has risen to 26s. 11d. at Canterbury and to 26s. 7d. at Reading; but Salisbury, Norwich, Lincoln, Doncaster, and Cambridge, all quote under 25s. per qr. The important market of Ipswich quotes a 25s. 4d. average.

The price of English oats is good at Reading, where 19s. 5d. per 312 lb. is averaged. Chelmsford quotes 18s 9d., Chichester 18s. 2d., and Salisbury 18s. 5d., which are not unremunerative prices. At Canterbury, however, (unless there be some error in the Government returns), extreme depression prevails, and only 16s 9d. is averaged in Yorkshire.

The sales of British wheat at the statute markets since harvest have been large. Prices have been depressed in consequenc, but have latterly shown improvement. The returns for 1905 thus compare with the thirteen first completed weeks of last cereal year:—

This season 1,130,000 qrs. at 27s. 3d. per qr.
Last season 605,000 qrs. at 30s. 2d. per qr.

The sales of British barley at the statute markets have been a little heavier than last season, but not so much so, as the larger yield per acre shown by the Board of Agriculture returns would have led us to expect. The price made has been low, but seems to be mending.

This season 1,914,000 qrs. at 28s. 4d. per qr.
Last season 1,830,000 qrs. at 28s. 1d. per qr.

The sales of British oats since September 1 have been decidedly small, and value in consequence is advancing.

This season 364,000 qrs. at 16s. 7d. per qr.
Last season 461,000 qrs. at 15s. 11d. per qr.

The imports of the U.K. for the past week have been:—

Wheat, 363,000 qrs.; a fairly good supply
Flour, 140,000 sacks; a fairly good supply.
Maize, 117,000 qrs.; not much more than half the current wants.
Barley 167,000 qrs.; somewhat excessive imports.
Oats 83,000 qrs.; a good deal less than the market requires.

Imports of the United Kingdom for September, October, and November, making the first quarter of a new cereal year, have been as follows:—

	Qrs.
Wheat	5,172,000
Flour	1,292,000
Breadstuffs	6,464,000
	Qrs.
Maize	2,654,000
Oats	1,275,000
Barley	2,410,000

The imports of breadstuffs have been a little below the average; those of spring corn have not been excessive. Of barley there has been a comparative glut, of oats a comparative scarcity. Maize occupies an intermediate position, but has certainly not been abundant.

In 1904 the imports of September, October, and November were as follows:—

	Qrs.
Wheat	6,748,000
Flour	996,000
Breadstuffs	7,744,000
	Qrs.
Maize	2,601,000
Oats	1,289,000
Barley	2,359,000

It will be seen that we are relapsing into the vicious system of importing an undue quantity of our breadstuffs in the form of flour. The English mills did a bumper business in 1904, but they now are once more feeling the pressure of American competition.

Twelve thousand pounds were paid at Mark Lane on November 24, 27, and 29 for English wheat, eight thousand quarters of which averaged 30s. 1d. per 480 lb., or 31s. 8d. per 504 lb.; the majority of transactions were on the latter basis. These are the largest sales of English wheat chronicled at Mark Lane since the new century came in, and they are probably the largest sales on record. They were, we understand, the largest since the Board of Agriculture took over the inspectorship for London, and before that date there was a tendency, owing to a weaker executive, for many firms to ignore the duty of sending in returns. The figures of pre-Board of Agriculture days are, in fact, ignored by the statistical world for the most part.

The sales of English barley and oats in London during November were moderate, but did not drop away so much as is sometimes the case.

The trade in farm seeds is improving. Red cloverseed of the new English crop is not coming to hand as fast as buyers could wish. The fine samples at 70s. to 85s. per cwt. are few, and the crop as a whole is not thought to exceed a very moderate average of quality. Hopes ran a little higher in August. Some useful samples are to hand from Germany, Russia, and Chile, and the latter are all well worthy of buyers' attention. White cloverseed, Timothy, and trefoil are still neglected, but a better demand is looked for "after Smithfield." There are offers of New Zealand cocksfoot at 60s. for the good 18 lb. type.

Supplies on passage show an increase in the important items of wheat, flour, barley, oats, maize, cottonseed, and linseed. It is only on the minor articles—beans, peas, and rapeseed—that there is a falling off. The wheat returns for December 1 were:—

	Qrs.
Californian	250,000
American	305,000

TO-DAY'S MARKETS.

MARK LANE, MONDAY, December 4

[FIRST REPORT.]

There was an excellent attendance, [illegible] on the first day of Smithfield week. English [illegible] sold well at full prices, and was the [illegible] which steadily supported demand on an otherwise reactionary market. Foreign wheat gave way 6d. for Russian, Roumanian, American, and Argentine, but was steady through spot scarcity for Indian. Maize was 6d. lower for both white and yellow, but round was not usually obtainable. Small lots were proffered at quite fancy prices, 26s. to 34s., according to type and condition. Barley was 3d. cheaper for Russian, but the turn dearer for fine English, Chilian, and Californian. Oats receded 3d. for 304 lb. and 312 lb. sorts, but were in improved request at the alteration. Heavy oats were, if anything, a little dearer from the close of November. Beans and haricots were rather dearer to buy, as were some sorts of rice. Peas, rye, and linseed were firm at currencies.

CLOSE OF THE MARKET.

THE MARKET CLOSED RATHER FIRMLY, BUT BUSINESS WAS PREVENTED TO A GREAT EXTENT BY THE BAD LIGHT. FACTORS.

THE FLOUR TRADE.

MARK LANE, MONDAY, December 4

Prices receded to-day 6d. per sack for London and country makes, also for nearly all American sorts of flour. Australian was not maintainable at quite old prices. Hungarian, however, was unchanged. Russian and Argentine are temporarily off the market; while French continues neglected. Manitoba flour made 27s. for patents on spot, 26s. 3d. on passage. Some prices quoted were 27s. 3d. for landed Wisconsan patent, 25s. 6d. for good Milwaukee, 25s. 3d. for Ohio, 27s. 3d. for good Duluth, 26s for Nebraska. Some secondary types of Manitoba were on offer at 22s. per sack. Cascadia flour was quoted at 27s. per sack. Germany sent a small supply of fine flour, which made 27s. 6d. to 29s. per sack, and fancy Belgian was on offer at 28s. per sack. Whole meal had buyers at 200s. per ton for No. 1, and 185s. for No. 2. The market for milling offals favoured holders.

LONDON TERM MARKET.

This market is open to elected members only and is held at the Baltic Club, St. Mary Axe. No business except for future delivery is done, and the smallest quantity that can be purchased is 1,000 quarters, or 4,800 cental.

Prices quoted on Saturday at the close of the week's trade were as follows:—

WHEAT (per cental).

No. 2 American Red	6s. 10d.	Dec. delivery.
,, ,,	6s. 10d.	Jan. ,,
,, ,,	6s. 9d.	Mar. ,,
,, ,,	6s. 10d.	May ,,

MAIZE (per cental).

American	4s. 4d.	Jan. delivery.
,,	4s 3d.	Mar. ,,
,,	4s. 3d.	May ,,

The market for futures today was unchanged in prices, but was a trifle steadier in feeling.

FRUIT AND VEGETABLES.

Covent Garden, Saturday.—A steady demand prevailed for a good supply of fruit and vegetables. Quotations of English produce: Grapes, 8d to 4s; apples, 5s to 10s per bushel; ditto (Cox's Orange Pippins), 2s to 3s 6d per box; cob nuts, 5s 6d to 6s 6d per 12lb.; tomatoes, 3s to 5s per 12lb.; sprue, 9s to 10s per dozen bundles; celery, 6s to 12s 6d per dozen rolls; horseradish, 3s 6d to 12s 6d per dozen bundles; Jerusalem artichokes, 1s 6d to 2s per half sieve; Brussels sprouts, 1s to 1s 6d; beetroots, 2s to 2s 6d per bushel; parsnips, 2s 6d to 3s; turnip tops, 1s 6d to 2s per bag; onions, 4s 6d to 6s per cwt.; endive, 1s to 1s 3d; cucumbers, 3s to 5s per dozen; cabbages, 3s 6d to 5s; cauliflowers, 6s 6d to 10s per tally; spinach, 1s 6d to 2s per bushel; leeks, 1s 6d to 2s; turnips, 2s to 3s; carrots, 2s to 3s per dozen bunches; mushrooms, 8s to 12s per 12lb.; seakale, 12s to 18s per dozen punnets; garlic, 15s to 16s per cwt.; potatoes, 60s to 85s per ton.

GRAIN AND FLOUR FACTORS REPORT.

Flour.—No new feature to report; the higher quotations from America have no perceptible influences on buyers, nor do they prevent wholesale merchants and home millers accepting prices somewhat below recent quotations. GREENHILL BROS. (Belfast).

Offals. The demand for bran is again improving, and for most qualities prices are being quoted 2s. 6d. to 5s. per ton higher.—GREENHILL BROS. (Belfast).

Flour.—Demand is slow and arrivals heavy. Grain. American Indian corn, owing to an arrival, is 6d. per boll down. Plate maize quiet at 14s. 6d. Beans 3d. dearer. Oats, barley, and pease unchanged. Grey pease and gram 3d. to 6d. per 280 lb. up. Oilcake firm. Oatmeal 6d. per sack higher. Mill Stuffs.—Bran and Thirds very scarce.—MCKINNON AND MCDONALD (Glasgow).

Flour.—A quiet trade at last week's full prices. —T. S. MEDILL AND SONS, LTD.

Milling Offals.—Millers keep quite clear of all grades at full prices.—JOHN BAWCOMB AND CO.

Wheat shipments during the past week have been large, and we have liberal arrivals. Trade is slow. Russian wheat unchanged. American 3d dearer. Flour slow at late rates. Maize in favour of buyers. Barley 3d. and oats 6d. to 1s. per qr. dearer.—COVENTRY.

FEEDING STUFFS.

London, Monday.—Linseed cake: As is generally the case just previous to end of year, trade keeps quiet, but with small stocks of both foreign and home-made cakes values are well maintained. Cotton cake: Trade is ruling principally in this article owing to the comparatively low figure asked, and prices are inclined to harden. Decorticated cotton cake and meal: Stocks of meal are almost bare, values being merely nominal. Linseed: A good trade and strong markets.

ROBERT AND JOHN HEWETSON.

THE BALTIC. 1 p.m.

STATE OF TRADE.

The cargo trade is not quite so weak this morning for wheat, and is much firmer for oats. Considering the large supplies on passage, oilseed cargoes must be regarded as very well held. There are no changes to-day in the prices of cargoes of maize or barley.

BUSINESS DONE.

WHEAT.—Santa Fé, 31 6d per 480lb. on passage; Barletta, 32s per 480lb.; on passage; White Walla, 32s 6d per 500lb., on passage; Red Walla, 31s 6d per 500lb., on passage; Australian, 32s 3d per 480lb., February shipment; No. 1 Northern Manitoba, 32s 6d per 480lb., on passage; Roumanian, 31s 6d per 492lb., prompt shipment; Russian Winter, 33s per 492lb., prompt shipment.

MAIZE.—Argentine, 22s 9d per 480lb., December shipment; American, 20s 3d per 480lb., January shipment.

BARLEY.—Azoff, 20s 9d per 400lb., on passage; Californian, 28s per 448lb., December shipment.

OATS.—Black Liban, 16s 6d per 304lb., prompt shipment; Odessa, 16s per 304lb., prompt shipment; American, 17s. per 320lb., January shipment; Black Irish, 17s 3d per 304lb., prompt shipment.

LINSEED.—Calcutta, 40s 3d per 410lb., on passage; Argentine, 37s 3d per 416lb., February shipment.

RAPESEED.—Brown Calcutta, 38s 6d per 416lb., June shipment; Ferozepore, 40s 3d per 416lb., on passage.

COTTONSEED.—Egyptian, £5 15s per 2,240lb., January shipment; Bombay, £4 15s per 2,240lb., January shipment.

PROVISIONS.

London, Monday.—Bacon: The arrivals of bacon last week were from Ireland 2,661 bales, and from foreign ports 9,609 bales. The bacon market was steady but quiet last week: Danish and Irish firm on short arrivals, but Canadian some 1s to 2s easier in consequence of fair supplies, and a weaker demand, ranging:—Irish, 60s to 62s up to 66s; Danish, 54s to 62s up to 66s; Canadian, 52s to 55s up to 58s, and quoted up to 60s. Butter: The butter market was quiet; Danish being again some 2s to 3s cheaper; prices ranging:—French, 100s to 120s; Danish, 118s to 120s; Russian, 94s to 108s; Canadian, 94s to 108s; Australian, 96s to 115s; New Zealand, 110s to 115s; Argentine, 112s to 114s; American, 80s to 106s. Lard: The lard market was firm:—Irish, 55s to 64s; Danish, 56s to 60s; American, 39s 3d to 40s 6d.

CATTLE.

Metropolitan Market, Islington.

	Monday, Dec. 4, 1905. British.	Total.	Monday, Dec. 5, 1904.
Beasts	200	200	1,269
Sheep and Lambs	5,440	5,440	6,950
Calves	10	10	10
Milch Cows	49	49	49

Quotations per 8 lb. (sinking the offal):—

ENGLISH

	Inferior.	Second.	First.
Beasts	2s 10d	3s 6d	4s 6d
Sheep	3s 10d	4s 8d	5s 10d

Milch cows, per head, £17 to £23.

British arrivals include as follows: Scotland, nil; Eastern Counties, 111; Midland, Home and Western Counties, —; Devon, 35; Ireland, 12.

We note to-day an increase of 190 head in the number of beasts offered for sale compared with Monday last; trade for both prime and second quality cattle, was of a slow nature, with a downward tendency in value, though not quotably so; the slow trade experienced here to-day is partly attributed to buyers holding back their purchases for the Great 'Xmas Market which will be held on Monday next. The Irish arrivals consisted only of 12 Stores, which met with no demand, consequently they remain unquotable. Fat butchering cows and bulls were slow of sale at a decline in value for anything that was not of very choice quality.

The following are top quotations per 8 lb. (sinking the offal):—

	To-day.	Monday, Dec. 5, 1904.
Scotch	—	4s 4d to 4s 6d
Devons	4s 4d to 4s 6d	—
Herefords	4s 4d to 4s 6d	4s 4d to 4s 6d
Norfolk	4s 4d to 4s 6d	4s 4d to 4s 6d
Runts	4s 0d to 4s 4d	4s 0d to 4s 6d
Lincolns	3s 10d to 4s 0d	3s 8d ex 3s 10d
Irish	—	3s 10d to 4s 0d
Fat Cows	3s 4d to 3s 6d	3s 4d to 3s 6d

There was a decrease of 500 head in the number of sheep penned compared with Monday last. Trade ruled slow for all grades of both wethers and ewes, rates favouring the buyer, although, not quotably so. Irish descriptions were in smaller numbers and with a poor trade were quoted 2d. lower, on the other hand Scotch sheep sold well, at late currencies, all on offer being disposed off. The supply included 100 Scotch, 530 Irish and 1,503 from the Eastern Counties. The prospects of a clearance being made is extremely doubtful.

Undermentioned quotations are at per 8 lb. (sinking the offal), and are for the best of each class penned:—

	To-day.	Monday, Dec. 5, 1904
7½ to 8 st Downs	5s 8d to 5s 10d	5s 8d to 5s 10d
9 st Downs	5s 6d to 5s 8d	5s 6d to 5s 8d
10 st Half-breds	5s 4d to 5s 6d	5s 2d to 5s 4d
10 st Irish	5s 2d to 5s 4d	5s 2d to 5s 4d
10 st Down Ewes	3s 10d to 4s 0d	3s 10d to 4s 0d
11 st Hampshire Legs	5s 6d to 5s 8d	3s 8d to 3s 10d

Calf trade nominal.

No pigs on the market.

London (Central), Monday.—Supply good, trade quiet. Beef: Scotch, 3s 8d to 4s 2d; English, 3s to 3s 4d; American, 3s to 3s 3d. Mutton: Scotch tegs and wethers, 4s 4d to 5s; ewes, 3s 4d to 3s 6d; English wethers, 4s 2d to 4s 6d; ewes, 3s to 3s 4d; New Zealand, 2s 4d to 2s 8d; Lamb: New Zealand, 2s 8d to 2s 10d. Veal: 3s 8d to 4s 8d. Pork: 3s 11d to 4s 3d.

St. Ives (Hunts), Monday.—Beast 444, sheep 660, pigs 354. Beef, 7s 3d to 8s; mutton, 7s 7d to 10s 6d; pork, 6s 6d to 7s 6d; fat and store cattle sharp trade; fat and store sheep and pigs good demand; milch cows short supply, £15 to £22.

FOREIGN.

Deptford, Monday.—Beasts, 460. To-day's supply of beasts, compared with Monday last, showed a decrease of 210 head, and consisted of 320 from the United States, and 140 from Canada. Trade was of a slow nature, at a decline of 1d per 8lb. on the States' cattle; Canadians were quoted at late rates. Besides the above, about 1,000 States and 300 Canadians were withheld for Wednesday. The best States were quoted at from 3s 9d to 3s 11d; seconds, 3s 7d to 3s 8d; Canadians, 3s 5d to 3s 7d per 8lb. (sinking the offal). On Saturday, 1,967 States and 233 Canadian were offered for sale, and met with a slow trade at about late rates. The best States on offer were quoted at from 3s 10d to 4s; seconds, 3s 7d. Canadians, 3s 5d to 3s 7d; seconds, 3s 2d. 181 Canadian ewes were offered for sale and were quoted at from 3s 10d to 4s per 8lb. (offal given in).

Liverpool, Monday.—Supply of cattle was smaller than last week; good qualities in demand at fully late rates; middling and inferior classes difficult to cash again. Smaller supply of sheep; notwithstanding, this trade was very slow, and there was no appreciable alteration in prices. Beef, 5¾d to 4¾d; mutton, 9d to 6d per lb. At market: 1,274 cattle and 2,907 sheep.

ply; prices £15 to £22.

HOPS

London, Monday.—W. H. and H. Le May, 67, Borough, London, report:—The demand for English hops continues. Stocks are now exceedingly limited, and values are hardening.

Worcester, Saturday.—An improved demand, with smaller supplies, has had a hardening effect on this market, and hops cannot be bought at late rates. Holders ask more money, and few choice lots can be found. Best medium samples are, however, very good value, and hardly pay cost of growing; 987 pockets have been weighed this week.—CHARLES FARAM AND CO.

SEEDS

London, Monday.—An extremely well attended market has put life into the trade. Fair business passing in clovers and grasses at firm prices. English reds are coming out freely, and find buyers at reasonable prices. New spring tares have opened too high to attract buyers here; a good trade might be done were prices reasonable. —JOHN PICARD AND CO.

POTATOES.

Borough, Saturday.—Good supplies were offered, but met a slow demand. Best sorts, 55s to 60s; Blacklands, 50s to 55s; Dunbars, 50s to 70s; ditto (grey soil), 55s to 65s per ton.

LIVE STOCK AND MEAT TRADE REVIEW

(WRITTEN SPECIALLY FOR THE "MARK LANE EXPRESS.")

Trade in London.

At the Islington Cattle Market during the week there was a slightly smaller number of beasts on offer, trade throughout the week for both prime and second quality English cattle was of a slow nature, nevertheless, late rates were fairly maintained for the best. The supply, as usual at this season of the year, was chiefly drawn from the Midland, Home, and Western Counties. The Irish arrivals were considerably smaller, and met with an extremely dull and dragging trade, rates ruling 2d. per 8 lb. in favour of the buyer. There was a full supply of fat butchering cows and bulls, but these met with a limited inquiry from both town and country buyers, consequently sellers were willing to accept from 1d. to 2d. per 8 lb. less money to effect sales. On Thursday, about thirty fat beasts were on offer, but these were quite unsaleable; fat beasts and rough cattle were slow of sale at late currencies. The total number offered for sale on both markets was 4,900, as against 4,690 during the previous week, consisting of 1,280 British (decrease fifty) and 3,620 Foreign (increase 260. These latter comprising 3,387 from the United States and 233 from Canada. The following were the top rates paid per 8 lb. (sinking the offal):—80 to 90 stone Devons, 4s. 4d. to 4s. 6d.; 90 to 95 stone Herefords, 4s. 4d. to 4s. 6d.; 95 stone Runts, 4s. to 4s. 4d.; 90 stone Norfolks, 4s. 4d. to 4s. 6d.; 100 stone Shorthorns, 3s. 10d. to 4s.; 95 stone Irish, 3s. 6d. to 3s. 8d.; 90 stone States, 3s. 8d. to 4s. 1d.; 95 stone Canadians, 3s. 2d. to 3s. 7d.; 90 stone fat cows, 3s. 4d., ex. 3s. 6d.

The trade for sheep, both wethers and ewes, was of an extremely slow nature, the tendency in regard to value being a downward one, though barely sufficient to enable us to quote any lower rates. Scotch and Irish descriptions shared in the general depression of trade, and met a decline of 2d. per 8 lb.; this is partly attributed to the bad trade which has been experienced at the Dead Meat Market lately. On Thursday late rates were difficult to obtain for all grades, although no quotable decline can be noticed. At Deptford, 181 Canadian ewes were offered for sale. The total number penned was 6,161, as against 6,490 during the previous week, consisting of 5,980 British and 181 Canadians. The following were the top rates paid per 8 lb. (sinking the offal):—7½ to 8 stone Downs, 5s. 8d. to 5s. 10d.; 8 stone Scotch, 5s. 8d. to 5s. 10d.; 9 stone Downs, 5s. 6d. to 5s. 8d.; 10 stone Irish, 5s. 4d. to 5s. 6d.; 10 stone Downs, 5s. 4d. to 5s. 6d.; 10 stone half-breds, 5s. 4d. to 5s. 6d.; 10 stone Down ewes, 4s.; 11 stone Hampshire tegs, 5s. 6d. to 5s. 8d.; Canadian ewes, 4s.

Calves numbered twenty, trade nominal.

Pigs (thirty), trade slow but firm, but small breeds were quoted at 4s. 6d.

Trade in the West.

The stock markets once again present slightly more satisfactory features than they did a week or a fortnight ago both in regard to store as well as fat stock. With less need for extra feeding than was the case when, with unusually severe frosts nightly, the temperature had sunk so abnormally low during the last fortnight, barreners are going strong just now, young fresh-conditioned grazing cattle making £24 to £32 per pair, the latter price being readily paid for good class Devons or Shorthorns, but more medium-class animals are scarcely in so much demand at from about £18 to £22 or £23 a pair, and rough inferior grades—old cows, etc.—are still much neglected. In regard to milch beasts we must quote all the best heifers or cows quite 10s. to 20s. a head dearer than they were, good reliable milchers selling from £18 up to £23 apiece, and, though the latter is rather an outside figure, we know of several, in which this price has been paid both for heifers and cows.

Coming to fat stock we are pleased to note less activity oth for beef and mutton. With prices decidedly favouring the seller some very good Devons, both steers and heifers, are coming out to make room for those being finished off for Christmas, and these are commanding a fairly active trade at from £15 10s. to £22 apiece for the smaller weights and £24 to £30 for heavier animals, or quite 4s. 10d. per stone, more medium quality bullocks bringing 4s. 4d. to 4s 8d., and plainer grades at 3s. 10d. to 4s., with cows at 3s. 4d. to 3s. 10d., according to quality. Best wether mutton is also selling at advanced rates, the choicest qualities making 5s. 8d. to 6s. 2d. per stone; secondary grades are rather slower of sale, but prices are well maintained at 5s. 4d. to 5s. 6d.; ewes selling at 4s. 2d. to 4s. 4d. The calf trade continues exceptionally firm, best vealers, which are bringing from £4 10s. to £6 10s. each, being computed as worth 8d. to 8½d. per lb., and seconds, for which there is likewise a good inquiry, 7d. to 7½d. Porkers as well as baconers are almost eclipsing themselves in point of price, the choicest weights in porkers now bringing 11s. to 11s. 6d. (if not over) per score and hogs 9s. to 10s. 6d. (according to weight); sows 8s. to 8s. 6d. The trade in slaughtering pigs has not been so good for years as it is at present; and the spread of wine fever in different parts of the country is not likely to bring down values. As regards Christmas prospects there is a better outlook just now than many had predicted, though prices are expected to keep at a medium level for everything except the very choicest grades.

Trade in Scotland.

The number of fat cattle on offer has been a full average and the general quality good. For the best class a fair demand was experienced at prices as nearly as possible similar to the previous week, while secondary kinds were a shade cheaper. There was a full supply of sheep. For those adapted for shop purposes previous prices were obtained, but owing to the bad reports from London, hoggs and heavy weighted sheep made 1s. a head less money. Ewes in better supply than for some weeks, and they met a good inquiry at fairly satisfactory prices. A very small supply of fat calves, and the best class exceedingly dear. Fat pigs made previous prices. A few more store sheep on offer, and anything of a good class got fairly well sold, but a few of the middling sheep left over. "Big Wednesday" market has been held this week, at which there was a full average number of store cattle, many of them of a very indifferent class. There was a fair inquiry, and a good clearance effected of all well-bred cattle, but a considerable number of two-year-olds and small calves were left unsold. The best class of milch cows met a satisfactory trade, but the secondary descriptions were very difficult to sell at less money. Quotations:—Top price of best cattle per live cwt., 39s. 1d.; current, 36s. to 37s. 6d.; Irish, 30s. to 32s.; mutton, 7d. to fully 9d per lb —JOHN SWAN AND SONS, LIMITED

Trade in Ireland.

There was a good attendance of buyers, both exporters and home trade, at last Thursday's Dublin Market. The cattle offered for sale numbered 4,339, an increase of 68 on the week; while the sheep were 5,584, or 300 less. The majority of the cattle were wanting in finish, and for such the buying was slow, and perhaps slightly lower. For really choice, well-finished beef the demand was good at about last market rates, though several of the cross-Channel buyers, who are generally in evidence for the few Dublin markets before Christmas, were conspicuous by their absence. Stall-fed beef is meeting with better inquiry than it did. Coarse beef was a drug. Prime grass-fed cattle ruled at from 28s. to 30s. per cwt. (live weight), but a few choice lots made 1s. per cwt. more. The enormous importations of foreign cattle and meat, of course, means a serious loss to the Irish cattle trade. The number of live cattle landed from foreign ports in England during last week was 11,554, and the quantity of foreign meat was 71,163 cwt. A very choice lot of cattle in Dublin Market on Thursday were fed by Lord De Vesci, and sold at 33s. 6d. per cwt. (live weight) for the London market. Best ox and heifer beef made from 48s. to 52s., and in a few exceptional cases up to 54s. and even 56s. per cwt. (dead weight); good second-quality beef, from 45s. to 47s. 6d.; and inferior ditto, from 42s. to 44s. per cwt.

The mutton trade, owing to smaller supplies, was rather more active, and there was a fairly brisk demand for best sorts of wethers, and for nicely-meated ewes, at an advance of about 1s. per head. Hoggets suitable for the North of England markets were looked for, but in heavy hoggets for London market little or nothing was done. Choice wether mutton made from 7d. to 7¾d. per lb., but the latter price was only for very fancy sheep; choice ewes, from 6d. to 6¼d., and occasionally a fraction more, per lb., and inferior sheep from 5d. per lb. upwards. For prime veal there was a good demand at from 7d. to 8¼d. per lb., but no improvement for coarse inferior calves.

A limited number of milch cows on offer, and for really good ones there was a firm trade; best freshly-calved cows making from £17 to £19, and heavy young springers from £18 to £21. Ordinary cows could be bought from £9 upwards. Store cattle still very quiet, and any purchased were chiefly for shipping. Prices very irregular. The pig market was well supplied, but the absence of some of the English buyers and the representatives of most of the Irish curing firms made trade weaker all round than on the previous Thursday, and a very tedious clearance was effected. Choice light-weight pigs sold at 50s. to 54s. per cwt. (for best); inferior, from 32s. per cwt. upwards.

LONDON.

Islington, Thursday. — Supply of beasts compared with Thursday last showed decrease of 40 head, consist chiefly of fat butchering cows and bulls, and fairly large consignment of prime quality cattle; for the latter, however, there was practically no demand, quotations, consequently, cannot berecorded. Fat cows and bulls met slow demand, sales being more or less forced; nevertheless, no lower rates are quotable. Top prices: Fat cows, 3s 4d, extreme 3s 6d; fat bulls, 2s 10d to 3s 2d. Sheep supply consisted entirely of Downs and half-breds. Trade very slow, late rates being obtained with difficulty, chiefly due to marked absence of retail buyers and over-stocked state of the dead meat market. Best pens made per 8lb. as follows:—8st Downs, 5s 8d to 5s 10d; 9st ditto, 5s 6d to 5s 8d; 10st ditto, 5s 4d to 5s 6d; 10st half-breds, 5s 4d to 5s 6d; 10st Down ewes, 3s 10d to 4s. Calf trade nominal. Pig trade slow but steady; best small breeds quoted 4s 6d per 8lb. Quotations per 8lb. (sinking the offal):—Beasts, 2s 10d to 3s 6d; sheep, 3s 10d to 5s 10d; pigs, 2s 10d to 4s 6d. Total supply:—Beasts, 100; sheep, 80; calves, 10; pigs, 30; milch cows, 5.

London (Central), Friday.—Supplies were on a large scale, but with no improvement in the demand, business again made slow progress at about late values. Arrivals of beef included 70 tons Scotch, 142 Liverpool sides, 2,150 hindquarters, and 1,500 forequarters American refrigerated; also 1,000 Argentine chilled hindquarters and forequarters. Quotations: Beef: Scotch short sides, 3s 10d to 4s; extreme, 4s 2d; long sides, 3s 8d to 3s 10d; English, 3s to 3s 4d; American Deptford killed, 3s to 3s 4d; Liverpool sides, 2s 10d to 3s 2d; American refrigerated hindquarters, best, 3s 2d to 3s 6d; fore quarters, 2s 2d to 2s 4d; Argentine chilled hindquarters, 2s to 2s 4d; forequarters, 1s 10d to 2s; New Zealand hindquarters, 2s 2d to 2s 4d; forequarters, 1s 9d to 1s 10d. Mutton: Scotch tegs, 4s to 5s; wethers, 4s 4d to 4s 6d; extreme, 4s 8d; English wethers, 4s 2d to 4s 6d; Scotch ewes, 3s 4d to 3s 6d; English ditto, 3s to 3s 4d; New Zealand, 2s 4d to 2s 8d. Lamb: New Zealand, s2 8d to 2s 10d. Veal: English and Dutch, 3s 8d to 4s 8d. Pork: English, 4s to 4s 8d; Dutch, 3s 11d to 4s 6d per 8lb.

COUNTRY.

Ashford, Tuesday.—Beef, in smaller supply, sold rather better; prime heifers and steers making 4s 4d to 4s 8d per stone; prime animals are now being kept back for Christmas trade. Best mutton made up to 6d a stone for Downs, and 5s 8d for Kents. Veal dearer, up to 5s 4d. Pork also dearer, roasters making up to 4s 8d per stone.

Basingstoke, Wednesday.—At Raynbord and Sons' sale yard there was a good attendance of buyers to meet a supply of 29 fat beasts, 47 calves, 379 fat sheep and lambs, 310 pigs, and 161 head of dairy and store cattle, for which the following prices were realised:—Fat Shorthorn beasts made up to £19 18s.; Welsh runts, £17 to £21; two-year-old Galloways up to £18; cows £13 to £15; fat calves 65s to 85s; small 20s to 50s; fat hogs 69s to 85s; porkers 48s to 64s; small 28s to 45s; store pigs 10s to 26s; dairy cows £8 15s to £21 15s. Best Down wethers and young ewes made from 50s to 54s; ten months old 50s to 55s; smaller 40s to 48s; three months old sucking lambs 26s to 38s; old Down ewes 34s to 40s; Down rams 43s to 55s; smaller and inferior 36s to 42s. A little more inquiry for fat beasts, previous prices ruling in most transactions. Fat sheep met a good inquiry from buyers for local and distant markets; late rates well maintained with a satisfactory clearance. There were plenty of buyers of the best class milch cows and heifers at an advance in price. Store cattle met a better inquiry, a clearance being nearly made at more money. Fat calves sold well at late rates. Fat hogs and porkers continue a brisk trade, and for all good ripe quality pigs late prices were well maintained. Fat sows are in demand, selling readily. Store pigs were cleared without a brisk trade. Best fat beasts 6½d to 7d; second ditto, 6d to 6½d; bulls, cows, and inferior 4½d to 5½d per lb; best fat sheep 8½d to 9d; second ditto 7½d to 8d; old ewes, rams, and inferior 6d to 6½d per lb; fat calves 7d to 8½d per lb; fat hogs 9s 6d to 10s 6d; fat porkers 11s to 12s 6d; fat sows up to 8s 6d per score.

Berwick, Saturday.—Cattle numbered 439 beasts — 35 less than the previous week. Attendance of farmers and buyers small, quality of stock good, and trade bad. Calves, £4 5s to £5 5s; heifers, £8 10s to £10 10s; stirks, £9 to £10; two-year-olds, £12 to £13; Shorthorn bulls, £11 10s to £13 10s.

Birmingham, Thursday.—Fair supply of pigs, small supply of beasts and sheep. Trade fair for pigs, but slow for beasts and sheep. Beef, 4½d to 6d per lb., a few Herefords 6½d per lb.; mutton, 6½d to 8¾d per lb., a few 9d per lb.; bacon pigs, 9s 9d to 9s 10d per score; cutting pigs, 10s per score; porkets, 11s 4d per score; sows, 8s 3d to 8s 4d per score.

Bristol, Thursday.—Beef was plentiful, but demand scarcely up to the average, and best qualities declined slightly in value, being quoted at 54s to 56s per cwt. Sheep were fairly numerous, and trade was quiet, last week's prices being maintained in all grades, whilst ewes went up to 6½d per lb. Pigs were in short supply, and porkers advanced 3d to 11s per score.

Canterbury, Saturday.—Cows and calves were selling at from £14 to £20 10s; yearlings, £8 to £9 10s; and two-year-old heifers up to £13 per head.

Carlisle, Saturday.—The supply on the Sands was the smallest of the season, there being only about 100 Irish store cattle forward. Buyers were scarce, and the market was very slow. Wintering heifers, £8 10s to £12 10s; horned bullocks, £7 10s to £9 10s.

Calne, Friday.—Present prices for prime pigs, in lots of not less than ten, on rail within 100 miles of Calne.

Prime Stores.	Thickness of fat in any part of Back.	Price per Sc. s. d.
6sc. 10 lb. to 9 sc. 10 lb...	2½ in. and under	9 6
Under 10 sc.	Not exceeding 2½ in. ..	9 6
Under 11 sc. 10 lb. ...	2¾ in. ...	9 0
Under 12 sc. ... ... ,,	3 in. ...	8 6

C. AND T. HARRIS AND CO., LTD.

Chester, Thursday.—Supplies were well up to the average, and there was a very good demand for best dairy stock. In other classes trade was quiet, and the market proved very disappointing to sellers. Prices generally ruled much the same as last week. Milch cows, £15 to £22; calvers, £14 to £18; barrens, £10 to £13; heifers, £8 to £14; and stirks, £5 to £9.

Colchester, Saturday.—There was a good trade, and a good supply this week all round. Beef, 4s 4d to 4s 8d; mutton, 5s 6d to 6s per 8lb.; pork, 9s to 9s 6d per score.

Doncaster, Saturday.—Large supply of cattle, and

quality above the average. Steady trade, and prices firm. Milch beasts, £16 to £23; bullocks, £12 to £17; heifers and drapes, £11 to £15; young stores, £5 to £7 each. Small supply of sheep, and though trade was not brisk, prices were firm. Hoggs, 38s to 44s; shearlings, 42s to 46s each.

Dorchester, Saturday.—To-day's cattle market was again heavily supplied, especially with barreners, of which Messrs. Ensor and Son held their second sale to-day. In spite of unpleasant weather the sale was well attended, and a brisk trade resulted, especially for young fresh conditioned graziers, which made up to £28 per pair, ranging down to £18 for plainer grades; two-year-old steers making for Devons up to £12 10s. Milch beasts made very brisk, especially for heavy milchers, which brought from £17 to £21 10s for best, and from £14 to £16 15s for others; in-calvers, £10 10s to £14; a few good fat heifers sold from £15 to £17 for medium weights (or up to 11s per score); fat bulls making to £17 (or 9s. 6d to 10s). Not much doing in mutton, with a firmer trade. A good many barreners were again bought to go into Somerset; a good clearing trade resulted.

Dublin, Thursday.—Numbers in market: Beasts 4,339, increase 68; sheep 5,584, decrease 360; calves 36, increase 11. The demand for choice cattle was well sustained, but late rates could not be exceeded. Rough sorts were rather in excess of requirements and some concessions had to be made in order to effect sales. No material alteration in price of sheep compared with last week, though buyers operated very cautiously. Cattle (live weight), best 27s to 29s 6d per cwt.; exceptional for Angus crosses up to 32s. per cwt; rough and inferior sorts 24s to 26s 6d per cwt. Mutton (dead weight), 5½d to 7¼d per lb.—GANLY, SONS AND CO.

Edinburgh, Wednesday.—There was a large supply of store cattle, with a good trade; Polled bullocks sold to £14 15s; horned, £14 10s, and stirks, £10. A good show of store sheep; half-bred hoogs sold to 37s, Cheviot Dinmonts to 38s, cross hoggets to 28s, and Black-faced Dinmonts to 34s each. A fair sale for cows; Shorthorns to £26; crosses to £23 10s, and Ayrshires to £19 10s per head.

Exeter, Friday.—Smaller supply of beasts; good demand for best sorts; steers and maiden heifers, 11s per score; cows, 9s to 10s; mostly all sold. Large supply of sheep; better quality at late rates; hogs, 8d to 8½d per lb.; wethers, 8d; ewes, 6d to 6½d; all best sold. A large number of lambs, for turnips, 32s to 38s each; many unsold. Calves, 7½d per lb.

Glasgow, Wednesday.—There was a moderate show; demand slow, owing to the glutted state of the dead meat market. Top Scotch cattle, 63s; current, 60s to 62s; top Irish, 56s per cwt.; top hoggs, 9½d; secondary, 8½d to 9d; top wethers, 8d to 8½d; secondary, 7½d per lb Dead meat easier; best Scotch beef, 6d; States, 4¾d to 4⅞; Canadians, 4¾d to 4¾d per lb.

Gloucester, Saturday.—Messrs. Bruton, Knowles and Co. report their sales as follows: A very large supply of cows and calves (95), with good trade for the best quality, the highest prices being £21 2s 6d, £21, £20 10s, and £20. A very short supply of store cattle, with fair trade.

Hereford, Wednesday.—The beef trade was slightly better than last week, best heifer and bullock beef rallising from 6d to 6½d pr lb.; cow beef made 5d per lb. The supply was good. There was only a few calves on offer and the demand was poor; veal fetched from 6½d to 7d per lb. The sheep trade was bad and the supply meagre; best wether mutton made 8½d per lb. and ewe mutton 6d to 7d per lb. Porks were a fair trade at from 5½d to 6d per lb., and baconers sold well at 4d to 6d per lb. There was a good supply. The store cattle trade was very dull.

Leicester, Saturday.—Full average consignments of home-bred stock. Trade ruled sluggish at fully 10s per head decline. Choice milch cows, £20 to £23 10s; good lots, £17 to £19; inferior, £14 to £16; Shorthorn cattle, £10 to £12 10s; Irish bullocks, £12 to £15; Welsh runts £9 to £11 10s; calves, 20s to 40s; lamb hoggs, 32s to 33s each.

Lincoln, Friday.—Large consignments of beasts, and a dull trade. Yearlings, £8 to £10; two-year-olds, £12 to £16; and drapes, £10 to £12. Sheep were penned in small numbers, and the demand was fair; hogs, 38s to 43s.

Lynn, Tuesday.—A little larger show of fat beasts, 7s to 8s per stone; smaller show of stores, slow trade, £6 to £14 each. Small show of fat sheep, 9s to 10s per stone. Scarcely any store sheep, 42s to 44s; lambs, 26s each.

Manchester, Friday.—Beef: First class, 4¾; second class, 3¾d to 4¼d; third class, 2¾d. to 3¼d. Mutton: First class, Scotch cheviots, 7¼d; others, 7d; second class, 6d to 6¼d; third class, 5¼ to 5½d. Veal: First class, 7d.; second class, 6d to 6½d; third class, 5d to 5½d. Bacon pigs: First class, 5½d; second class, 4¾d. to 5¼d; third class, 3¾d to 4¼d. Porker pigs: First class, 7d; second class, 6¼d to 6¾d; third class, 6d to 6¼d per lb.

Norwich, Saturday.—Trade not so good for fat beasts, of which there was a large supply, top price being 7s 9d per stone; slow trade again experienced for store animals, which were offered in large numbers for lateness of season; values in home cases showed a decrease of 5s to 10s per head, and prices averaging £6 to £16 per head. Very few store sheep and dragging demand, keeping hoggets making 30s to 41s per head. Fat sheep penned in large numbers, and prices ranging from 9s to 10s per stone. Ready demand for fat pigs, at 6s 9d to 7s 3d per stone.

Nottingham, Saturday.—Smaller show all round, and trade about the same as last week. Best milch cows, £18 to £21 10s, and in-calf heifers, £13 to £17; strong heifers and steers, £9 to £13; younger beasts, £6 to £9; calves, 25s to 45s each.

Preston, Wednesday.—Although there was a fairly good supply both of cattle and sheep, buyers were not very numerous, and a rather quiet trade was experienced all round. Cows and bulls made 5d to 5¼d; heifers and bullocks 5¼d, hoggs 5¾d to 6¾d, tups 5¼d to 6d, ewes 6d to 7d, and lambs 8¼d to 8¾d per lb.

Retford, Saturday. — Limited show, but quite sufficiently for all requirements. Milch cows of first-class quality were especially scarce, and worth £17 to £20; steers and heifers, £12 to £14; yearlings, £6 to £8; calves, 40s each.

Romford, Wednesday. Fair supply of fat beasts, average trade. Best animals, 4s 4d to 4s 6d; middlings, 3s 10d to 4s per stone. Calves scarce, trade good at 5s 2d to 5s 4d per stone. Average supply of sheep, trade about same: best, 5s 8d to 5s 10d; middlings, 5s 2d to 5s 4d; ewes, 4s to 4s 2d per stone. No store beasts offered. Pig trade fair at late rates.

Shrewsbury, Tuesday.—Small supplies. Beef trade quiet. Sheep and pigs met with ready buyers at steady prices. Quotations: Beef, 5½ to 6¼d per lb; mutton, 7¼d to 9d per lb., veal, 7½d to 8¼ per lb.; porket pigs, 8s 9d to 10s 6d per score; bacon pigs, 8s 9d to 9s 9d score. Cows with calves up to £24 12s 6d. Numbers offered as follows: — Cattle 402, sheep 287, calves 63, pigs 445.

Thame, Tuesday. There was not quite such a large attendance of buyers as usual at this market, no doubt many are hanging back for the great Christmas Show on December 12, for which special entries of cattle have already been received. There was a capital entry of cattle, the quality being excellent. Trade was about the same as previous week, a practical clearance being effected. Sheep still continue scarce, with a firm trade. Veal, bacon, and pork in demand. Messrs. Bond and Burrows' sale comprised 72 fat beasts, 92 fat sheep, 71 fat and weaning calves, and 112 fat and store pigs. Fat heifers made from £16 to £21. Fat oxen from £17 to £24 5s. Fat ewes 42s to 50. Fat tegs 43s to 48s. Fat wethers 50s to 56s. Fat calves £3 to £4 10s. Weaning cow calves 20s to 55s. Bull calves 10s to 70s. Bacon hogs £3 10s to £5 10s. Porkers 26s to 48s. Stores 12s to 22s.

Truro, Wednesday.—Business fairly brisk. Attendance very good. Fat bullocks, 54s to 58s per cwt.; barreners and store bullocks, 40s to 45s; cows and calves, £10 to £16 each; rearing calves, 20s to 34s; wethers, 7d to 7½d per lb.; ewes, 5½d to 6d; lambs, 7d to 7½d; pigs, 8s 9d to 42s each. Beef, 6d to 8d per lb.; mutton, 6d to 8d; lamb, 6d to 8d; veal, 6d to 8d; pork, 6d to 8d; bacon, uncured, 6d to 7½d; ditto, cured, 7d to 9d; pork carcasses, 4½d to 5½d. Number in cattle market:—Bullocks, 424; calves, 65; sheep, 182; pigs, 194.

Wolverhampton, Wednesday. — Fair supply all round. Trade slow for beasts, good for sheep. Beef, 5d to 6½d per lb.; mutton, 6d to 9d per lb.; veal, 6½d to 7½d per lb.

Worksop, Wednesday.—Moderate supply of stock, with prices down as compared with late rates. Best beef, 6s 6d to 7s; secondary, 6s to 6s 6d per stone; best Southdown wethers and cross-bred shearlings, 7d to 8½d; ewes, 4d to 7d per lb.

POTATOES.

Goole, Wednesday.—There was a large attendance, but not much change in prices. Royal Kidneys and Evergoods made £2 per ton, and best Dates 50s to 52s 6d. Potatoes are still being shipped to America, 200 tons being now ready. No change in retail prices.

Manchester, Saturday.—Yorkshire warps, 7s to 9s; sands, 6s to 7s; Cheshire kidneys, 4s 6d to 5s 6d; Irish, 3s per cwt.

Southwark (Waterside), Saturday.—During the past week the arrivals have been in excess of the demand, and prices for all samples have been in buyers' favour. The following are this day's quotations:—Scotch Up-to-Dates, 55s to 65s per ton; Scotch B. Queens, 55s to 65s per ton; Lincoln Evergoods, 50s to 60s per ton; Lincoln Up-to-Dates, 60s to 70s per ton; Blackland Up-to-Dates, 50s to 57s 6d per ton; Blackland B. Queens, 50s to 55s per ton; Blackland Evergoods, 50s to 55s per ton.—R. G. BROWN.

York, Saturday.—Fair supply of potatoes, with a steady demand at late rates. Best sands made up to 40s, and warps 45s to 52s 6d per ton.

COLONIAL DAIRY PRODUCE

London, Friday.—Butter: The demand for Australian butter this week has not been quite so brisk as last owing to the large arrivals (which are the largest for any week this season), having cast their shadows before them. The number of boxes arriving during the week being over 32,000, but next week only 18,000 are due, and the following week 12,700, and for the week ending December 23, 25,800. The prices of "Choicest" salted Australian are 112s per cwt., with an occasional 113s and 114s. "Finest" salted are making 104s to 108s. "Choicest" Queensland makes 108s, and "Finest" 104s to 106s. The Danish official quotation has been lowered by three kroner, and the market is reported dull in Copenhagen. The competition of New Zealand in the North of England is causing the reduction in the price of Danish. Siberian arrivals are very small this week, and about 5,000 boxes of Argentine have arrived and are selling at 112s to 114s. Cheese.—There has been a good trade in Canadian cheese, and "Choicest" goods are making 60s. per cwt for white and 61s for coloured. "Finest" white sells at 58s and coloured at 59s, but the "Choicest" goods are much the better value.—W. WEDDEL AND CO.

WET GRAINS.

London, Saturday.—Wet Grains.—Prices are now very firm at 21s ale, and 1/ to 18s porter per ton. These prices being current at this time last year, and as all other feeding stuffs are so much dearer, higher prices may still be looed for. Wet distillers' grains maintain price at 30s and 32s 6d per ton. Pressed white distillery meal, 32s 6d to 35s per ton. Dried grains are without change, ale 102s 6d, mixed 97s 6d, and distillers 115s. These are relatively the cheapest feed, as thoy havo not depreciated with other feeding stuffs. Dried Distillery Meal.—45.80 per cent oil and albuminoids, without change, 117s 6d per ton. All the above are free on rail London.—HAMLYN AND CO.

Irish Live Weight Quotation.

Department of Agriculture and Technical Instruction for Ireland.)

The following returns are those of actual sales made in Robson's Cattle Mart, Belfast, the stock being weighed either before or after sale, for week ending Oct. 3, 1905.

FEEDING STUFFS.

Hull, Tuesday.—Linseed. The arrivals are 20 qr from Harlingen, 250 Libau, 5,677 St. Petersburg; total, 5,947 qr. The shipments for the week ending November 24, were: Plate, 52,000 orders and other U.K. ports; 52,000 Continent; total, 64,000 qr. Calcutta: 5,190 London; 1,090 other U.K. ports; 6,000 U.K., via Cape; total, 76,280 qr. The market is lifeless, and values are 6d. per qr lower on the week. River Plate: Spot, 37s 9d ex store; afloat and November December sold at 37s 9d; January February nominally 36s 3d. Cottonseed. Without quotable change in prices of Egyptian, the market has continued quiet, and only a moderate business done at £5 12s 6d spot, £5 11s 3d passage, November and December January shipments, which are to day's values. Bombay sold at £4 15s December, and this price since accepted for shipment by 5th of the month, January offers at £4 14s 6d, and January-February £4 12s 6d. Oilseed Cakes. A steady market, at previous rates.—KEIGHLEY, MAXSTED AND CO.

London, Thursday.—Linseed. Market is steady with a rather improved demand, sellers very reticent. Calcutta-London Spot 40s; afloat 40s, October-November 40s, November December 39s 3d, April-June 38s. Hull—rather more inquiry. La Plata spot 38s, passage 38s, November-December 38s 3d, December-January 37s 6d, and January-February 37s. Rapeseed easier and buyers difficult to find. Yellow Cawnpore November-December 42s 6d. Yellow Guzerat 43s 6d. New crop, March-May shipment, Yellow Guzerat 43s 6d, Yellow Cawnpore 42s 6d, Brown Cawnpore 38s 9d., Ferozepore 38s 9d. Brown Calcutta new crop 37s 9d. Cottonseed.—The market has been very quiet; for the last two days Alexandria has been practically closed, on account of holidays, which has somewhat interfered with business. At the close there was a firm tendency. London—Spot £5 16s 3d, November-January £5 13s 9d. Hull—Spot and passage £5 13s 9d, November-January £5 to £5 12s 6d Oil Cakes.—Linseed cakes firm. London made £8 2s 6d to £8 5s. Cotton cakes firm. London made £4 17s 6d to £4 18s 9d.—THE PRODUCE BROKERS CO., LTD.

Mark Lane, Monday.—Linseed cakes: Supplies of foreign continue on a very limited scale, and most of the home mills are either running short time or turning their attention to cottons; consequently, values are fairly well maintained in spite of a very poor consumptive demand. Russian remain relatively cheap at last weekes prices. American still offer unchanged. East India seed pures may be bought at late rates. London-made are only sparingly offered, and needy buyers are compelled to pay full prices of last week. Cotton cakes: The market is almost bare of stocks, but a steamer parcel, shortly due, is procurable at last week's quotations, while slightly less would be accepted for late delivery. English move off steadily at 1s 3d per ton less money. Decorticated, London-made, finds a free sale at £6 17s 6d for cake; £7 for meal; and £5 5s for special digestive meal. Rape cakes do not offer. Maize germ meal: A parcel of white American, shortly due, offers at £5 17s 6d free to trucks, at which it is in moderate request. English remain scarce and dear. Maize gluten meal may be bought at £6, both in spot and forward positions. Rice meal: A fair business has been done in the past week in steamer parcels of Rangoon at £4 16s 3d to £4 17s 6d, and the market has a further hardening tendency. Broken Rangoon rice in bags is temptingly offered at £4 15s per ton. Locust beans are unchanged at £5 10s for whole, and £5 15s per ton for kibbled. Nitrate of soda is fully as dear at £10 10s per ton ex quay for spot for spring delivery.

MOLASSINE FEEDING MEAL, packed in bags of 1 cwt each. Price per ton, £6 15s., in ton lots and upwards. £7 10s. per ton in less than ton lots. Free on rail, Liverpool or London. Uniform delivered price for small quantities, 10s. per bag of 1 cwt.

HAY AND STRAW.

Birmingham, Friday.—Small supply; trade quiet. Quotations: Hay, £3 15s to £4 per ton; clover, £4 to £4 5s per ton; straw, 2s 8d per cwt.

Derby, Friday.—Best clover, 80s to 90s per ton; wheat straw, 60s to 70s per ton; pressed straw, 50s to 55s per ton; oat straw, 50s to 60s per ton; peat moss litter, 35s to 40s per ton.

Manchester, Friday.—Hay, 4¾d to 5½d; clover, 5¼d to 6½d; wheat straw, 3½d; oat ditto, 3¾d to 3¾d per stone.

Whitechapel, Saturday.—Supplies were of fair extent, but a quiet demand prevailed. Prices:— Best clover, 72s to 80s; inferior ditto, 60s to 70s; specially picked hay, 72s 6d; good ditto, 60s to 70s; inferior ditto, 45s to 57s 6d; mixture and sainfoin, 67s to 72s 6d; straw, 25s to 34s per load.

HOPS.

Canterbury, Saturday.—A brisk demand continues, and values have hardened all round.

The Agricultural Annual and Mark Lane Express Almanac, 1906.

Good as have been the past issues, we think it will be generally agreed that the 1906 edition of "The Agricultural Annual and Mark Lane Express Almanac" now in its fourteenth year, is the best of the series it is certainly the largest, 272 pages. In general appearance it is on similar lines to those which have made it so popular - namely, plenty of readable, and, at the same time, useful, articles and an abundance of illustrations, the latter depicting various phases of farm life, and horses, cattle, sheep, and pigs that have figured notably in our show yards during the year; there are also the many useful tables and statistics, brought up to date, so valuable for reference at all times. In fact, this "Annual" has become to be looked upon as *the* farmers' handbook. Recognising this, many have familiarly termed it the "Farmers' Red Book," and falling in with the idea, the publishers have this year bound the pages in a deep red coloured cover, and given "The Annual" the subsidiary title of "The Farmers' Red Book," under which designation "The Agricultural Annual and Mark Lane Express Almanac" is likely to achieve even greater things than in the past.

There is another innovation which calls for mention, and this is a Fertilisers' and Feeding Stuffs' section. During the past year there has appeared each week in the MARK LANE EXPRESS a Yellow Supplement dealing exclusively with the two matters just mentioned, and it is the success which this has achieved that has induced the publishers of "The Annual" to devote some of its pages to fertiliser and feeding stuff matters. We think the innovation will be generally welcomed, for both subjects deeply affect farmers, many of whom in the past have been somewhat careless in the purchase of their manure or feeding stuffs, but happily are beginning to understand the advantages arising from thoughtful consideration of the manure to apply, and, when buying, seeing that they get what they pay for, and not a manure deficient in some of its most valuable constituents. The same remark can be applied to feeding stuffs, and it is this necessity for care in the direction stated that the Yellow Supplement in the MARK LANE EXPRESS has for months past been strenuously pressing home to agriculturists, and to a great extent this is the object of the new section in "The Annual," but it also has another aim, and that is the dissemination of knowledge concerning the various fertilisers and feeding stuffs, and this the numerous facts, etc., given cannot fail to do

So much for a general survey of The Annual; now let us turn to the articles. In the first place there is 'An Agricultural Programme," which, in connection with the promised early General Election, should prove of the greatest interest. Farmers are called upon to sink their political views, and to unite in pressing upon candidates for Parliament the necessity of passing several measures (which are enumerated) of vital importance to agriculturists in general. This "Agricultural Programme" will be much in evidence at the next General Election. Then we come to two old and welcome features of this Annual, namely, the reviews of the past year's work and its results, etc., on the farm, and details of pedigree live stock sales in 1905. The subjects are not unduly laboured, the review of the farm work taking up less than a dozen pages, whilst the pedigree stock sales details are given briefly yet sufficiently. The result is they are of general interest to all, whereas a lengthy discourse of every breed would not appeal to every one, whilst much valuable space would be taken up. The chief value of such particulars is their recording for future reference the results of the year 1905, and this the articles in question do amply.

Small holdings are always a subject for interesting discussion, and therefore the article, "A Country of Small Holdings," by L. P. Hadley, will be welcomed, for it gives some interesting details of some successful holdings. Hunters have for several years past been receiving increased attention from farmers, and in "Hunter Breeding for Farmers," "Pleasure and Profit" gives some good advice on the subject. An interesting insight as to how agriculture is taught in an agricultural college in Australia is given by J. T. Critchell's article, "Hawkesbury: An Australian Agricultural College"; "Miller Farmer" gives some useful advice in "Success in Flour Milling"; whilst E. G. F. Walker has one of his characteristic contributions written in West Country vernacular, and containing much that is humorous, sometimes sarcastic, but, nevertheless, has many truths, in "Experiences with a Moral." Our Position as Regards Light-Horse Breeding" is considered by W. Scarth Dixon. G. H. Hollingworth contributes "After the Potato Boom," and the gist of his remarks may be imagined; J. B. Simpson has something to say concerning "Wintering Store Cattle in the North of England"; and the year's doings of the Royal Agricultural Society in connection with its show and Park Royal are recounted by "A. J. B." "M.R.C.V.S." gives some instructions on "How to Blister the Horse." The shows of 1905 and the hop trade are reviewed by "A. W. S." and "Lupulin," respectively; whilst there are other articles, including one on geese by "J. W. H.," and another on "Birds in the Field and Garden" by "R. W. D."

It will thus be seen that the articles cover a wide range of subjects, practically all branches of our greatest industry receiving attention. The illustrations are better than ever, and include portraits of the President of the Board of Agriculture, the President of the Royal, and the Chairmen of the Central Chamber and the Farmers' Club. Although bigger than last year, the price of "The Annual" is still 1s., of all booksellers, or can be had post-free 1s. 4d. from the offices of the "Mark Lane Express," 3, Wellington Street, Strand, W.C.

Border Union.

The report presented at the annual meeting of the Border Union Agricultural SIociety states that the animal show was very successful as regards both the number and quality of the exhibits. The total receipts for the year amounted to £1,161 18s. 6d., or £31 15s. less than in 1904; and the total expenditure to £948 8s. 5½d. The balance at the credit of the society now amounts to the substantial sum of £482 4s. 5d. The Duke of Buccleuch was elected president for the year, and Mr. John Scott, Ploughlands, was unanimously re-elected secretary and treasurer. It was agreed to hold the annual show on Monday, August 6 next, the date of St. James's Fair, and the ram sales were fixed to take place on the second Friday of September, being the 14th of that month.

Gloucestershire Chamber.

At the meeting of the members of the Gloucestershire Chamber of Agriculture was held at Gloucester on Saturday last, when the subject of "Our System of Local Taxation" was discussed, and the following resolution was unanimously passed: "That the rise in the rates is a serious danger, and this Chamber wishes to draw the attention of the Central Chamber of Agriculture to the desirability of abolishing the compound rate-payers." The following proposition was down for consideration, to be introduced by Mr. J. G. Hawkins: "That exhibitors, who, regardless of cost, maintain shows as a hobby, are injurious to the agricultural industry, in so much as they alienate the sympathy of the country in its state of depression."—Mr. J. H. Jones said Mr. Hawkins, being unable to attend, had asked him to introduce the subject, but he presumed, in view of the advanced hour, they would not go on with it that day.—The Chamber agreed, and it was understood that a motion would be introduced at the next meeting of the Chamber.

Tunbridge Wells Farmers.

The chief subject of discussion at Friday's meeting of the Tunbridge Wells Farmers' Club was the traspasser nuisance, particularly gipsies. Mr. Troy spoke of the difficulties of dealing with trespassers on farm lands, and observed that he found the worst trouble with gipsies. He thought the club should ask the Central Chamber to take some steps to deal with these people. Mr. Williamson remarked that gipsies thought they could go on anybody's land and do what they liked with other people's property. Mr. Parris said he knew of a case in the Crowborough district during a fair, when no fewer than thirty horses were found in one field. It was difficult to get rid of them. The police were called, but little could be done. Several other farmers present agreed as to the unsatisfactory state of the law of trespass. Mr. Troy suggested that delegates to the Central Chamber should urge for something to be done to bring gipsies' vans under the same sanitary arrangements as ordinary house property. This would soon doubtless change matters. The bulk of those present agreed with Mr. Troy, and a motion by him, as suggested, was passed.

Berkeley Hunt.

There was a good attendance at the annual meeting of the Berkeley Hunt Agricultural Society held at Berkeley on Wednesday. Mr. R. A. Lister was voted to the chair in the absence of Lord Fitzhardinge, and in the course of a speech said they could again congratulate themselves upon the society being in a unique position of prosperity. The total receipts had been £1,036, and of that sum £690 had been distributed in money prizes, which indicated that no less than two-thirds of the income went right into the pockets of those competing for the prizes offered by the society. The prizes for the best-fenced farms were only second in the great advantages offered by the society. One could not help being struck, when going about the country, with the amount of work provided through these competitions and the consequent improvement in the neatness of the farms and the appearance of the countryside in the Berkeley Hunt. It was largely through the generosity of the latter that these prizes were forthcoming, and £55 was a very substantial sum to be divided (hear, hear). Their society had been referred to as one of the best educational institutions in the kingdom for the development of observation and knowledge in a practical way. The reports and accounts were adopted, and Lord Fitzhardinge re-elected President. Then followed an interesting discussion on the cider industry.

SMITHFIELD WEEK—SOME SHOW PARTICULARS.

This week is one of, if not the most, important of the year to farmers. The principal event is, of course, the Smithfield Club Show, or, as it is more amiliarly known, "The Cattle Show." This is expected to be rather above the average of recent years, and it remains to be seen whether his Majesty the King will repeat the remarkable series of successes gained at Birmingham. It is quite possible that one of the animals from the Scottish National Show may prove too much for the Birmingham winner, while there may even be a dark one somewhere in waiting.

His Majesty the King has notified his intention of visiting the Cattle Show to-day, at three p.m.

In addition to the Show, farming bodies of all sorts will hold meetings. On Wednesday, the Royal Agricultural Society will meet to appoint the new Secretary, while the annual farmers' dinner will take place on the previous day, under the chairmanship of the Earl of Derby, among the guests ebing the President of the Board of Agriculture.

The President of the Smithfield Club for the year is Lord Tredegar, who also filled this position twenty-five years ago. The interest in the Show is universal, breeders and exhibitors throughout the United Kingdom vying with each other for the valuable prizes offered by the Club, but more especially for the possession of the magnificent challenge cups presented by his Majesty the King, H.R.H. the Prince of Wales, and H.R.H. Prince Christian of Schleswig-Ho'stein.

The total value of the prizes offered is £4,153, which is allotted to the various sections as follows:—Cattle, £2,060; sheep, £1,185; pigs, £490; carcase competition, £296; and table poultry, £122. As it is possible for the champion beast to win £260 and the King's Challenge Cup, the best pen of sheep £110 and the Prince of Wales's Challenge Cup, and the best pen of pigs £70 and Prince Christian's Challenge Cup, it is natural that the finest animals in the United Kingdom should compete, including the champion animals from Birmingham, Edinburgh, and Norwich.

The chief alterations in the prize sheet are:—First prizes for Red Polled cattle increased in value to £20 each, and the value of the breed cup increased to £20; a £10 breed cup offered for Kerry and Dexter cattle, and £10 breed cup for small Cross-breds instead of a £15 breed cup between these breeds. Separate classes for Devon Long-wool and South Devon Lng-wool lambs; and a class instituted for single pig of any distinct or cross-breed. In the carcase competition the cattle and pig sections remain as last year; but in the sheep section the classes offered last year are now offered for pure breeds only, and additional classes are instituted for cross-breds.

The entries for the general sections of the Show exceed those of last year, the numbers being 301 head of cattle, 163 pens of sheep, and 107 pens of pigs; a total of 571 entries, comparing with 550 last year. In the carcase competition the entries number 24 cattle, 60 sheep, and 57 pigs, and the table poultry section 187 entries.

The carcases and table poultry will be sold by auction on the Thursday of the Show.

The following table shows the entries in the various sections for the last five years:—

	1905.	1904.	1903.	1902.	1901.
Cattle	301	276	286	262	273
Pens of sheep	163	168	152	165	157
Pens of pigs	107	106	115	101	96
Carcase competition:—

Shorthorns and Cross-breds.—Peter, James, Berkeley, Glos.; Eady, C. H., Lockinge, Wantage.

Aberdeen Angus and Galloways.—Whyte, William, Hatton of Eassie, Glamis, N.B.; Biggar, James, Grange Farm, Dalbeattie, N.B.

Welsh and Highland.—Harris, J. W., Pilrhoth, Llanstephan Road, Carmarthen; Macdiarmid, Robert, Castles, Lochawe, Argyll.

Kerry, Dexter, and Small Cross-bred Cattle.—Hordern, F. A., Buxted, Sussex; Roumieu, G. F., Bethune House, Farnham, Surrey.

£25 Cup, £50 Cups, Champion Plate, and King's Challenge Cup.—Stratton, Richard, The Duffryn, Newport, Mon.; Ferguson, W. S., Pictstonhill, Perth.

Sheep.

Leicesters, Border Leicesters, Cotswolds, and Lincolns.—Marshall, William, Cottam House, Driffield; Smith, Henry, The Grove, Cropwell Butler, Nottingham.

Kentish or Romney Marsh, Devons, etc.—Amos, Alfred, Wye, Ashford, Kent; Tuckett, William, Stockleigh Pomeroy, near Crediton.

Cheviots and Mountains.—Davidson, William, Cornhill Farm, Cornhill-on-Tweed; Linton, Simon, Oakwood, Selkirk.

Southdowns and Shropshires.—Penfold, Hugh, Moat Farm, Marston, Ampthill; Berry, A. S., Church Farm, Whittington, Lichfield.

Hampshire Downs and Suffolks.—Bennett, E. J., Chilmark, Salisbury; Smith, J. T., Dodnash Priory, Bentley, Ipswich.

Oxford Downs and Cross-Breds.—Eady, John M., Lancefield, Thorpe Malsor, Kettering; Eagle, T. Blake, Manor Farm, Thrupp, Oxford.

Ryeland and Dorset, etc.—Price, David, Bulwark House, Brecon; Kidner, John, Dodhill House, Taunton.

Champion Plates for Long and Short-woolled Sheep and Prince of Wales's Challenge Cup.—Thomas, William, The Hayes, Sully, Barry, Glamorganshire; Coxon, Charles, Elford Park, Tamworth.

Pigs.

Small White or Small Black, Middle and Large White Breeds.—Parr, John, Ruddington, Nottingham; Daybell, D. R., Bottesford, Nottingham.

Large Blacks and Berkshires.—Townsend, W., The Manse, Stroud, Glos.; Kimber, J. W., Fyfield Wick, Abingdon.

Tamworth and Cross-Breds.—Hill, J. B., Smethwick Hall, Congleton; Nichol, Anthony F., Bradford, Belford.

Champion Plates and Prince Christian Challenge Cup.—Crosland, Walter, Estate Office, Buscot Park, Faringdon; Philip, D. W., The Ashes, Whitacre, Birmingham.

Carcase Competition.

Cattle and Sheep.—Bright, R., Ivingtonbury, Leominster; Clark, C., Aberdeen House, Upper Clapton, N.E.

Pigs.—Cottrell, J. E., Abingdon, Berks; Venner, R. P., 97, Southampton Street, Reading.

Table Poultry.—Brooke, C. E., 11, Aberdeen Park, Highbury, N.; Phillips, E., 9, Sloane Street, S.W.

STOCK AND SHOW NOTES.

By Herdsman.

In consequence of the diminished interest in the feeding of fat stock for the Christmas markets, caused by the low prices, altered public taste, and other circumstances, several firms of auctioneers in the County of Worcester have abolished the custom of giving prizes at their Christmas sales. This custom has been discontinued by the auctioneers at the fat stock sales in some of the Northern Counties for several years, and it is probable that it will gradually die out entirely, as the object for which it was instituted no longer exists.

The demand for pedigree pigs from the well-known Walton herd, belonging to Sir Gilbert Greenall, Bart., of Walton Hall, Warrington, still continues brisk. A very choice Middle White boar has just been sold to Mr. Maclennan, for exportation to the Argentine, and was shipped from Liverpool on the 25th ult., per the Houston Line steamship "Harmonides." On the 28th ult. a fine Large White boar was shipped from Grimsby to Hamburg on account of a customer in Schleswig-Holstein, and on Thursday last a high-class Middle White in-pig sow was despatched per the steamship "Tokomaru" from the Royal Albert Docks, London, its destination being New Zealand. These pigs were of that high standard of excellence usually to be found at Walton. The home trade is said to be in a very flourishing state.

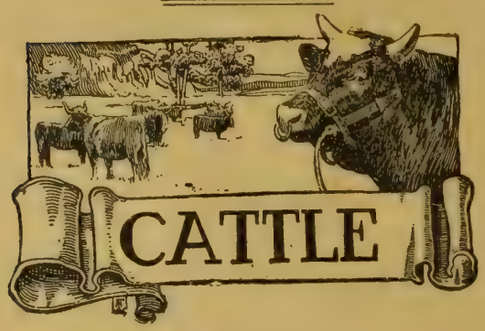
The Warwickshire Agricultural Society seem to be having a difficulty in finding an invitation for holding their show next year. It will be remembered that the Rugby and Dunchurch Agricultural Society recently decided that it was not desirable that the County society should hold their show in that town next year, and now the Atherstone District Council, on being asked, have by no means jumped at the offer. At a meeting of the Council last week, a letter was considered from the Warwickshire Agricultural Society, inquiring whether it was desirable that the annual show of 1906 should be held in the town of Atherstone, and stating that it would be necessary to provide a suitable site of about sixteen acres. It was pointed out that there would be some difficulty in the way of coming to Atherstone, seeing that the local Horticultural and Horse Society held their annual exhibition in Merevale Park about the same time, whilst the question of the prize list was also a very serious matter. Another member thought that the County show would also have a deleterious effect upon the Ansley Agricultural Show, and expressed the opinion that the local shows were more beneficial to the farmer. After some discussion, the Council deferred the question for a fortnight, in order that they might see what action was taken by the Nuneaton District Council, by whom a similar application had been received.

At a meeting of the Council of the Cleveland Agricultural Society, held at Redcar last week, it was decided not to amalgamate with the Yorkshire Show, which is to be held at Redcar next year, but to hold the show separately as usual.

The Council of the Suffolk Sheep Society met last week, when a letter was read from the Secretary of the Royal Agricultural Society, saying that the Stock Prizes Committee had had under consideration the composition of the prize sheet for the show to be held at Derby in 1906, and it was decided to recommend to the Council that the prizes for Suffolk sheep should be:—First £10, second £5, and third £3, in each case, for

shearling ram, three ram lambs, dropped in 1906; three sharling ewes of the same flock, and three ewe lambs, dropped in 1906. The Council of the Suffolk Sheep Society decided to give a class for two-shear rams, and one for single ram, with prizes of £10, £5, and

Messrs. Alfred Mansell and Co., of Shrewsbury, have recently despatched to Tasmania a small but very choice lot of Southdowns on account of Mr. Hart. Mr. Alfred Mansell selected all the animals, and for this purpose had visited Sandringham and Summersley. In rams Mr. Hart got a valuable sire bred by His Majesty the King, being one of the pen of three which won first prize at Park Royal, 1905. This ram was also the winner of first and champion at the Norfolk shows of 1904 and 1905. Another equally good ram hailed from Mr. Brassey's flock, and has been used extensively this season by Mr. Ellis, from whom he was purchased. In ewes, Mr. Hart obtained six of Mr. Ellis's best ewes (prize winners) in lamb to high-class sires. In selecting, special care was given to obtaining nice character, cherry skins, and dense wool.



Notes and Jottings.

The great annual Midland Counties fat stock show occupied the attention of most breeders last week. The show was all round an excellent one in point of quality. If there need be any complaint, it should be on the score of weight with regard to a few of the animals, some sections weighing lighter proportionately than others. The attendance during the week was very satisfactory, the private view day, as the Monday is commonly called, giving a considerable increase in gate money from the previous year. Tuesday in the Midlands was a very rainy day throughout, and so affected the gate adversely to a very slight extent. Wednesday and Thursday were also very good; indeed, on the Wednesday Birmingham was fuller of company than for years past.

Another very satisfactory item to report is the capital demand experienced for the animals that were for sale, the salesmen being able to report a record day on the Monday for sales, and this appeared to be followed up later, as the majority of the lots were labelled sold by the Wednesday evening. The prices obtained did not generally transpire, but there is reason to believe that these also were on the brighter side as compared with recent markets. The stock generally appeared to be very healthy, which is another gratifying point, and what is perhaps more gratifying of all is the fact that both the championship of the show and the reserve for the championship were won, and fairly so, by the pure-bred classes.

The great trophy of the breeders' champion prize, as well as the elaborate hundred-guinea cups presented for competition by Messrs. Elkington, Webb and Sons, and Mr. Joseph Thorley, were all carried off by H.M. the King's famous Hereford steer, first prize in the under three years old class. Like all the Windsor exhibits, he was bred in the Royal herd, sired by Iron Duke, and his dam Silver Cup. In age he is rather at a disadvantage, being but two years and nine months old, yet he weighs the extraordinary weight of 18 cwt. 0 qr. 12 lb., and is as active and free from over-feeding as a calf. His back and prime parts, too, are quite first class, and what is most creditable of all to the white faces is the fact that he is one of a class of eight, all of which are of great beauty and quality.

The reserve champion was H.M. the King's first prize Shorthorn heifer Madeleine, by Silver Plate. In age she is a couple of months older than the Hereford, she, however, for a female, scales quite remarkably, being 17 cwt. 1 qr. 15 lb., and carries her weight in very little compass. This, again is a wonderful achievement for a heifer of that age, and a highly-bred one. The success of the Royal herd was altogether a study, as, in addition to these champion honours, the best Hereford, best Shorthorn, and best Devon animals all came from the Windsor sheds, and the weight of these animals proves that both breeding and feeding have been most skilfully and creditably arranged and managed. Year after year the stock from the Royal farms find a high level, and their right to the honours accorded them is seldom disputed.

In the first of these notes it is mentioned that the only complaint that could be made in respect to the cattle at Birmingham was the too light weights recorded in a great many instances. When animals of any of the large pure breeds or crosses of those breeds are fattened from the day of their birth until three years old and do not attain more than from 14 to 15 cwt. there is something that ought not to be encouraged. Either the animals are of too small a cast, which means that with ordinary feeding they would not have made sufficient weight to be profitable or otherwise, and, what is quite as bad, their carcases must consist of flabby fat instead of close-grained flesh. A heavy weight in a small compass is considered by the butchers to be the best possible indication of flesh.

Comparing the weights of the pure breeds with those of the large crosses, or, more properly, the crosses of the large breeds, the females suffer perhaps most, the first and second prize heifers between two and three years scaling respectively 14 cwt. 0 qr. 4 lb. and 14 cwt. 2 qr. 14 lb., whilst the Shorthorn heifers scale 17 cwt. 1 qr. 15 lb. and 14 cwt. 3 qr. 11 lb., the third-prize heifer also weighing 15 cwt. 1 qr. 5 lb. The first-prize Hereford heifer also turns the scales at 17 cwt. 1 qr. 4 lb., and the second 14 cwt. 1 qr. 27 lb. The cross-bred steers over two and not exceeding three years, too, run at 16 cwt. 2 qr. 8 lb., 16 cwt. 1 qr. 13 lb., and 16 cwt. 3 qr. 13 lb., the Herefords being 18 cwt. 0 qr. 12 lb., 16 cwt. 0 qr. 24 lb., and 18 cwt. 3 qr. 20 lb., and the age of these latter is not at all in their favour. The Shorthorn steers of that age are not quite as heavy as the Herefords.

Comparing the two exclusively beef breeds, the Herefords with their best steer 18 cwt. 0 qr. 12 lb. at 2 years and 9 months old, the second prize one 16 cwt. 0 qr. 24 lb. at 2 years and 8 months, and the third prize one 18 cwt. 3 qr. 20 lb. at 2 years and 8 months, the Aberdeen-Angus of the same class first prize steer is 16 cwt. 1 qr. 16 lb. at 2 years 9 months, the second 15 cwt. 3 qr. 21 lb. at 2 years 11 months, and the third 16 cwt. 0 qr. 19 lb. at 2 years and 9 months, matters do not argue very favourably for the desired alteration in the date of the latter breed, some of these being as heavy, practically, as the Herefords that were not calved till after the usual date, and also that the oldest steer of the Angus breed, Mr. Earl's second prize one, which was born in December, according to the age given, is the lightest of the three first winners in his class.

Turning from beef to milk, one of our dailies gave an account recently of an action that had been brought against a milk seller owing to the poverty of milk drawn from a cow in the presence of the inspector, the said sample not being taken from the whole of the cow's milk. It is well known, or ought to be, by every one who sells milk, as well as by those who are considered competent inspectors, that the first portion of milk drawn from a cow with a full udder is simply skim milk, as compared with the last pint from the same cow. The case is rather difficult to understand. The producer certainly ought to have known better than let such a sample be taken, whilst the inspector was similarly unfair, and why costs were imposed on the farmer in such a case is very hard to see.

We have seen, too, prosecutions, or attempted prosecutions, for too much water being found in butter. Some argue that an excess of moisture in butter is of so trifling a consideration as not to be deserving of prosecution, as the excesses mentioned were so very slightly in excess of the allowable percentage. There is another side to this question, namely, the damage that this moisture does to the butter, which is of far greater importance to the consumer than the mere question of weight. When the buttermilk, or water that is used for washing the butter, and which in this process becomes more or less butter milky, is not thoroughly worked out, that butter will not keep sweet for any length of time, frequently in hot weather becoming sour after even two days.

IMPORTANT TO FARMERS.—The best Farm Account Books are "WEBB'S PRACTICAL FARMER'S ACCOUNT BOOK," with Preface by Clare Sewell Read; 72nd edition; 6s.; larger size, 7s. 6d. JARROLD'S IMPERIAL FARM ACCOUNT BOOKS, 3s. 6d.; JARROLD'S FARM LABOUR BOOKS, 2s., 2s. 6d., and 4s. 6d., post free. List of Game and Dairy Account Books, post free, of Jarrold and Sons, 10 and 11, Warwick Lane, E.C.—[ADVT.]

The demand for milking cows continues very brisk, though we hear but little of exceptional prices; this may, however, be due in a great measure to the fact that the generality of calving cows just at this time are rather lower in condition than in the average of seasons, owing to scarcity of feed in the middle of the summer, the time when, owing to the calf they were carrying being but a very light burden, they would, had their pasturage been good, have prepared themselves for winter's work by laying on plenty of flesh. In many herds complaints are rife as to the milk yield. This may be due in a measure to the dryness of the hay, a great deal of this product last year was far too much done before being stacked, and will need more roots to compensate it.

For some reasons, too, probably the same, butter has been more regular in price recently, and at a better price in many country districts than for some time past. A good supply of butter in the dead of winter is difficult to maintain, particularly if quality is to be regarded as well as quantity, and therefore a good fair price is necessary if a profit is to be made. One thing that helps much with the butter income during the winter months is the fact that the separated milk is of much more value, either for selling or to use up for calf rearing. The latter business should be most looked after at this time of the year, as good calves can be purchased more cheaply, and they get a start over those not bought till next May, when milk is plentiful again.

The milk records in Mr. John Evens's herd of Lincoln Red cattle, recently published, give excellent results, though in some past seasons those of the present year have been exceeded. During 1904 forty-three cows yielded an average per cow of 842 gallons, eight of these being heifers with their first calves. In 1899, however, it appears that 860 gallons per cow was reached on the average of 34 animals, and in 1896 forty-three cows gave an average of 889 gallons, 867 being recorded for the previous year. The records since 1890 appear to have been very good each year, though a little variable, the lowest average being 720 for thirty-five cows in 1891. Having regard to bad seasons as well as ill-luck occasionally, these records are very high.

Canadian Cattle Agitation.

Association Formed.

A conference of delegates representing nearly 100 county councils, borough councils, harbour boards, co-operative societies, butchers' associations, and agriculturists, was held on Monday for the purpose of considering the formation of an association to advocate the free importation of Canadian cattle. Bailie Watson (Glasgow) presided.

Rules for governing the Association which it was proposed to form were submitted by an executive committee appointed at a first conference called by the Glasgow Corporation last May. It was agreed that an association should be formed, with the title of "The Free Importation of Canadian Cattle Association of Great Britain," and that it should consist of chambers of agriculture, farmers' clubs, chambers of commerce, of municipal, harbour, railway, and local authorities, and of co-operative societies, butchers' and cowkeepers' associations, commercial and shipping firms, and any other parties interested in the removal of the restrictions on the importation of Canadian cattle. The object of the association was defined as "to secure the amendment of the Diseases of Animals Act of 1896, by providing for the abolition of the compulsory slaughter of Canadian cattle at the port of landing in Great Britain."

At the close of the formal business,

Mr. Hamar Grenwood briefly addressed the gathering. He said that everyone connected with Canadian administration was keenly interested in obtaining the removal of the embargo on the importation of Canadian cattle, and the Association would have their enthusiastic support. It was the unanimous opinion of the Canadian people that the present restrictions were unfair, unreasonable, and unjustifiable, and, indeed, one Minister of the Crown had gone so far as to describe the restrictions as constituting an unfriendly act. That being so, he thought it was full time that the British Government took cognisance of this disapproval on the part of the Canadian people. In these days of noisy Imperialism a splendid opportunity had presented itself of showing consideration for Canada, and at the same time benefiting the majority of the people of Great Britain.

Horse Notes.

"He doth nothing but talk of his horse."
—Merchant of Venice.

If the Neapolitan Prince did nothing but talk of his horse, as Portia complained, the Senior. Puisne judge of South Australia has no eye for any other light horse than the Arab. He "takes a fragment for a whole, and calls the whole a part" in framing his indictment against the English Thoroughbred, and everyone who does not agree with him is either put down as one of the crowd of "bookies, jockey boys, ten-dollar amateurs (whatever they may mean), dandies, barmaids' best boys, etc., for Sir James Boucaut treats us to a lot of this sort of thing in his book, "The Arab, the Horse of the Future."

I have seen a few Arabs in my time, and I have seen and known many good ones. But it is not doing any good to the breed as a breed to give it virtues which it does not possess. For instance, I have seen a weak-backed Arab, slack in the loins. Sir James Boucaut would have us believe that this does not necessarily imply lack of weight-carrying power—in the Arab. Well, in the instance which came to my notice it did, and I fail to see how a horse that is faultily made can be no worse for that faulty construction, simply because he is of a particular breed. I have seen Arabs, as I have already said, such as any man might be proud to have in his stable; I have seen others that I would not find on a line—with upright shoulders, straight pasterns, and little feet.

It is no part of my duty in these columns to discuss matters relating to the Turf, but I may say that, in common with all lovers of the horse as an animal, I am strongly opposed to the multiplication of short-distance racing which took place a few years ago, and which the Jockey Club has done its best to suppress. But I join issue at once with Sir James Boucaut when he asserts that the (asserted) deterioration of the Thoroughbred is due to short-distance racing. The latter is an effect rather than a cause. The cause of our Thoroughbreds not being what they ought to be, and what they easily might have been, is that we have neglected all but one particular strain of blood, and in-bred to that to the neglect of others, especially to the neglect of the great Herod line. Naturally we suffer from the consequences of continual in-breeding which in our case is to a very considerable extent indulged at the dictates of Fashion. There are countless breeders for the sale rings, and it is of little use sending up yearlings for sale unless they are by a fashionable sire.

But are we alone in following this pernicious plan of continuous in-breeding? I trow not, and the modern Arab is as in-bred as the modern English Thoroughbred. It is prejudice, which is perhaps only another name for Fashion, which has induced the Arab to go in for in-breeding to an extent which has certainly injured the breed. This statement is made on the authority of Darwin, and I certainly prefer Darwin to Sir James Boucaut as an authority.

Sir James Boucaut cites the English cavalry horse used in the Boer War as part of the indictment against the English thoroughbred. He is, by the way, very full of wrath about the English trooper and never fails to make an opportunity for comparing the useless English horses with the horses of the Boers, which he asserts to be Arabs, an assertion of which he does not give any satisfactory proof. Now, I do not hold a brief for the English trooper; he is, as a rule, very moderate. And how can he be expected to be anything else when £40 is the price paid for him? So long as the present system holds, English troopers will continue to be moderate. Even if the average quality of English bred horses were to improve by 50 per cent. or even 100 per cent., the class of troopers would show little improvement, because men have more sense than take the regulation price for a good horse. That there is always a better market for a good horse than the Remount Department affords, goes without saying.

Ex parte and prejudiced statements respecting a breed do a great deal of harm. And the harm they do is not to injure the breed in the eyes of impartial judges, but rather to distract attention from the weaknesses of the breed which they are used to attack. No good can possibly arise from bitter controversies about the superiority of one breed or another. In the heat of argument things are said pro and con which have no foundation in fact, and which are apt to confuse the main issue.

I presume what we all want is a sound, hardy, fast horse, capable of doing a heavy day's work and "coming again" within a reasonable time. We want something more than this. We want a horse with smooth action and good manners. And we want him, naturally, at a little price. It strikes one forcibly that the best way to obtain that horse is to use the material we have, and make the best possible use of it, rather than commence experimenting in the way of "making" a breed. We have a record of our thoroughbreds going back for two hundred years, and it is the only record of any breed which can boast of a life of two centuries. The Stud Book, much as Sir James Boucaut despises it, is an invaluable record of what has taken place, and if we study it carefully we shall, I think, soon find our general purpose thoroughbreds improving.

Let me give an instance or two of the good which is in the general purpose thoroughbred of the present day, the horse that is anathema to Sir James Boucaut and his friends. In the first place the best harness horse I ever sat behind was a thoroughbred, bought out of a selling race for some £15. He on one occasion did his twelve miles within the hour with much of the road against the collar. The two of us who were in the heavy dogcart would average 14 st. each, and there was some luggage, which might be put at another two or three stone. And at the end of the twelve miles the horse was as fresh as he was at the start.

A gentleman of my acquaintance buys every now and again thoroughbred yearlings. He buys big, long colts or fillies, not fashionably bred, and he never gives more than 20 gs. for one. Generally they make excellent 14 stone hunters. I have in my mind's eye now a mare he bought which was one of the best 15 stone hunters I ever saw, and which was bought at a yearling sale for under £20. I am quite sure that if some of these "unfashionably"—how I hate the word, but I must use it—bred yearlings were, instead of being forced for a yearling sale, allowed to live a more natural life, generously fed of course, but given every liberty, they would leave their breeders much more profit than they do at present, for they would grow into sizeable horses with plenty of bone. It has always been a wonder to me why such a plan has never been adopted, and horses sold at four instead of one year old.

"Sizeable"! Yes, that is where the difficulty comes in. It is somewhat curious when one hears people talking of undersized breeds, light bone, and other equine failings, to find them advocating the Arab-cross, and I am very much afraid the farmers would not look at an Arab sire for their half-bred mares, even if one could be found for them. They have been taught that big horses are wanted. Now those who have read these notes for the last two years do not need reminding that I have always advocated the small, neat thoroughbred, full of character and courage, as a hunter sire, and for the same reason I should like to see an Arab have a chance with some good Cleveland mares. But it must be an Arab with good shoulders, good back, and good action in all his paces, and in this latter quality a considerable proportion of the Arabs I have seen have been wanting.

THE LOOKER-ON.

Sale of Shires at Derby.

Sir Oswald Mosley's shire horses have such a wide reputation that a sale of some of them always attracts a large company of breeders from all parts of the country, and such was the case on the 24th ult., when at Derby Repository, Messrs. Sexton, Grimwade, and Beck brought under the hammer a number of firstclass shires belonging to Sir Oswald, and also some from Mr. H. W. Kearn's well-known herd. All the animals met good competition, and a satisfactory sale resulted, Sir Oswald Mosley's twenty-six animals averaging about £81 per head, and Mr. Kearn's thirty-six, £61 each. The best figure of the day was 340gs. given by Mr. R. Whitehead for Sir Oswald's Bodenham King, an excellent stallion, a son of which (Rolleston King) was sold later for 220gs., to Mr. E. Balderson. His Majesty the King paid 105gs. for Rolleston Conqueror, a two-year old filly, whilst Lord Egerton of Tatton was the purchaser of Pendle Helvellyn, a yearling colt, at 151gs., a similar sum being paid by Lord Burton for Harleston Gloaming, a four-year old brood mare. Mr. Gould, of Lynn, Cheshire, gave 260gs. for Darling, a massive grey brood mare. Other three-figure prices were 115 gs., given by Mr. Forshaw, of Carlton, for Fascination, a three-year-old filly, and 120 gs., paid by Mr. Jackson, of Knottingley, for a filly foal. A sale list is appended.

The property of Sir Oswald Mosley, Bart.

THREE-YEAR-OLD FILLIES

	Gs.
Keythorpe Duchess, b., s. Hendre Champion — Mr. Seawall	62
Holker Extravagance, b., s. Moorland Paxton — Mr. J. Conchar	63

Notes and Jottings.

The current week is occupied by England's great fat stock show, namely, the Smithfield Club Show. Flock-masters have many matters of interest to which they may with profit give attention. The Smithfield schedule provides probably the best and most valuable object lesson that can be given to flock-masters, particularly those who are non-stud sheep breeders.

In that section where the awards are won by the exhibits alive will be seen the full development, etc., that can be secured by both lambs and wethers reared under the most favourable circumstances, and in the carcase best classes can be seen the result of different breeds and crosses of the same when specially fed for slaughter.

Attention can also be given with profit to the cross-bred classes in the first section mentioned, because the exhibits in these classes show the resultant produce of the mating of at least two pure breeds of sheep. If our information is correct, the lamb class in this section will be of greater interest than usual this year, for we understand that there will be entries of at least three distinct crosses in Hampshire Down ewes, i.e., the Oxford Down, the Southdown, and the Shropshire, the latter cross being that which produced the Birmingham winning pen.

Amongst the interesting features, from the sheep-feeders' point of view, that came under observation at Birmingham Show was the splendid pen of cross-bred lambs that won first honours for Mr. H. C. Stephens.

The cross in this case is Shropshire and Hampshire Downs, and, from the wealth of flesh, grand backs, and good legs noticeable on these lambs, it is evidently a cross that ought to become a popular one in suitable localities.

To meet the present-day requirements of the mutton market, the conformation and size of these lambs appear preferable to the larger and more leggy lambs that are the produce of the Oxford Down and Hampshire cross.

This latter cross has for very many years been particularly successful at our Christmas shows, and there is no question of its value, but the same can with equal truth be said of the successful cross-breds that most deservedly took the lead at this year's Birmingham Show.

The exhibition of this cross will be of value to both the pure breeds from which it is descended, and adds another cross that can with advantage be used by those who are breeding to supply our mutton market. The Border Leicester breeders are finding out what all other breeders have done—namely, that the establishment of a flock book society to look after the general interests of their breed has resulted in an increased demand from the export buyer.

In other words, that which individual effort so often fails to accomplish can be done with far greater effect and at a much lower expense by the combined effort of a representative society. Wherever breeders combine and place the interest of the breed as a whole to the fore, then results such as those which have been secured by the society in question are practically certain to follow.

There is a matter that ought to be seriously taken in hand by the flock-masters of this country namely, to insist that some means or other should be taken at once to rid the country from sheep scab. The enormous amount of trouble and annoyance, not to mention the loss that is being continually inflicted upon innocent parties by reason of the neglect of negligent flock-masters to keep their flocks clear of this disease, is astounding. Yet, despite the knowledge of this fact, the vast majority of the flock-masters of this country are content to let the matter rest as at the present time, when a few months or so at the most of stringent and effective administration would practically rid the country of this pest.

If those responsible for the continuance of the present condition of the country in connection with this disease could realise the feeling of the New Zealand colonists who visit our country when they are told we are not free of this disease, it would certainly surprise them. Said a New Zealand flock-owner the other day, when the writer told him our country was not free, "This is to me incredible and disgraceful. In our country, despite all the difficulties that had to be overcome, an entire clearance was effected, but here in your country, fully enclosed with no wild or bush land stocked with wild and stray sheep, the work of eradication is but child's play compared with ours."

Mention is made of this subject because it is one that more than any other stops the greater development of the demand for stud sheep to New Zealand and Australasia, for, were this country free from sheep scab, it is more than probable that the period of quarantine for imported sheep would simply be that period occupied by the voyage, instead of being, in addition to the voyage, some lengthy period on arrival there.

The old Ryeland breed will soon be amongst those breeds that have a flock-book society to help to forward its interests, and, it may be added with emphasis, to bring before the public, both at home and abroad, the unquestionable merit of this breed for mutton and wool production.

One of the results of the late Royal Show in respect to this breed's exhibit there has been the sale of a valuable consignment of in-lamb ewes, ten in number, and a ram and ram lamb from the flocks owned by Messrs. Barnby and F. E. Gough to a New Zealand visitor. The purchaser of these sheep was attracted by the symmetry and conformation of the sheep that represented the breed at the Royal Show, and last week, accompanied by Mr. W. W. Chapman, an inspection was made of the two flocks named above, with the result that a selection of some of the best yearling ewes that could be selected from these two flocks, five from each, will, accompanied by a ram from Mr. Gough's flock and a ram lamb from Mr. Barnsby's flock be shipped from London on December 14 next for New Zealand.

To those who are unacquainted with this breed, it will be interesting if the exhibits made in the wether class at Smithfield be carefully examined, when it will be found that this but little known breed has very superior merit, which, if more widely known, would certainly lead to more demand, particularly for cross-breeding purposes.

An important shipment of Romney Marsh sheep has been made by Mr. C. File, of Eltham, Canterbury, to Mr. McRae, of the Argentine. The purchaser, making his own selection, has certainly secured a particularly fine lot of sheep. Two of the rams selected have been most successfully used as stud rams in the Eltham flock for four and three seasons respectively, and three others were used in the same flock this season. Six ram lambs were also taken. Included in this lot was one, if not more, out of that fine pen that took third honours at the Royal Show last June. Five in-lamb yearling ewes completed this valuable consignment, quite one of the best sent to the Argentine lately.

PIGS.

Colston and Barrowfield Herds of Large White Pigs.

Two exceptionally fine gelts have been purchased by Mr. O. A. T. Bennett, of Gateby Hall, East Dereham, Norfolk, for a well-known breeder in Galicia. This is the second consignment from these herds within the year; and a very fine Large White boar has been shipped to Schleswig for Mr. H. R. Hawkens, Camden Road, London. Messrs. Negretti and Zambra, exporters, London, have also purchased a very nice type of gelt for the Argentine: this is the second recent shipment to South America; and a little sister to the above has been exported to a customer near Posen, Germany. All the above are by the champion boar Vanguard, whose showyard career is so well known. The home trade has been exceptionally brisk of late, and there are a most promising lot of young pigs coming forward in both herds. In addition to the diploma of grand champion, another diploma has been awarded by the grand jury to the owner of these herds, as the breeder of the second best boar at the St. Louis Exposition.

Birmingham: Good Attendance.

The Birmingham Fat Stock Show was not favoured with fine weather last week, and the result was that the attendance suffered somewhat, particularly on the last day (Thursday), when weather of a most wretched description prevailed, and the attendance was considerably short of the totals for the corresponding days in previous years. However, there were large attendances on the other days, and the total for the five days was 43,711, or nearly 700 more than in 1905, whilst the receipts amounted to £1,292 15s., which is about £40 more than was received in 1904. Compared with twelve months ago there were larger attendances on Monday and on Wednesday, when the difference in the takings was something like £40. It is satisfactory to add that not a single complaint or protest was made by any of the exhibitors. As indicating the excellent supervision of the show it may also be stated that not a single case arose necessitating police prosecution. The following tables show the details of the admissions and the receipts:—

Tonbridge.

The annual Christmas fat stock, poultry, and grain show at Tonbridge took place in the spacious Agricultural Hall and cattle market buildings on Monday. There were, as usual, some scores of entries, not only from the immediately surrounding districts, but also from parts of Sussex and Surrey, so widely known and popular has now become this interesting fixture at the old town on the Medway. Ample space in the extensive covered building was afforded for the competitive

exhibits of fine Sussex beasts, Southdown and Romney Marsh sheep, and pigs of all sizes and breeds in the different classified sections. Taken altogether the show was a most encouraging example of the best of Southdown farmyard produce.

The entry of the Sussex cattle at this year's show were not so good, taken in the aggregate, as it has been usual to find them. Some few of the best animals have been retained at home to be sent direct to Smithfield, and thus with these in addition there will probably be found several alterations in the award list at that show. The older steer class was one in which preference was given to a very finely grown and lengthy steer from Mr. W. W. Berry's herd, bred by Lieut.-Col. W. W. Hammond. This steer had a capital loin and good top, but was lacking in the flank and not handling at its best; next came one from Mr. W. F. Winch's herd, whose touch was preferable to the winner, and might have taken precedence. The younger steer class had for its winner one exhibited by the exors of Louis Huth, a wide-topped and good loin steer, but one when handling alone that was not level along its back; a better formed steer, but not quite so wide, from Mrs. Montifiore's herd took second honours.

The heifer classes were divided in the same ages as the steers; in the older one a level and good-loined heifer with capital flesh took first honours; the Earl of Derby's entry, a fine heifer, had to be content with second place, and Mr. F. Manwaring took the r.n. The younger heifer class was a capital class; here the winner, which came from Mr. W. Cattley's herd, was of very considerable merit, a well-grown and fed heifer. A class for Sussex calves deserves brief mention, because it shows just how well this breed will develop when given full opportunity to do so. The Earl of Derby was first and second, both under the year, that gave a live weight of 8 cwt. 16 lb. and 7 cwt. 4 lb.; Mr. G. Warde's calf, under nine months, weight 6 cwt. 3 qr. 3 lb.

The any other breed section, practically all Aberdeen-Angus, was quite a feature of the show. The first class of this section for steers between two and under three years was by far the best class of the show, and it is seldom that so fine a lot of steers are seen at any local show. The winner here, a beautiful and level Aberdeen-Angus, was one from Mr. W. Cattley's herd, weighing at 31 months 16 cwt. 2 qr. 20 lb. This steer was very deep in its flesh, evenly fed, and moved well, and when champion honours fell to its lot the award was cordially approved. The younger steer class had for its winner a very fine and well-grown steer from Mr. T. Wother's herd; this animal was very ripe and in excellent form, winning easily in its class. The older of the two heifer classes was a smaller one, but in its winner, Mr. C. F. Stanford's well-fed and good-handling heifer, specially good along its back and loin, was found the r.n. for champion honours. The younger heifer class was a capital one; here T. Wotton repeated his success in the corresponding class for steers, and went to the fore with a well-topped heifer, but one that was run very close indeed by Mr. G. F. Stanford's entry, that came in for second place; the leading animal was better in the loin and back, but not quite so full at the fore end. Sir H. N. Dering, with a Shorthorn of good merit, came in for third honours.

The calf class for the any other breed section was a good one, in which the Aberdeen-Angus were all to the fore; first and r.n. went to a pair of well-grown and good-fleshed ones from Mr. A. Landgridge's herd, and the second place had for its occupant a very level and well-grown heifer from G. Drummonds at Penshurst.

A couple of classes for tenant farmers with steers and heifers mixed, one for under two, and the other for under three, raised a good entry, the former one particularly so. An auction class was added to the prize schedule, and it is evidently a popular class, for it secured a good entry. The winner was a very grand barren Sussex heifer from Mr. G. Warde's herd, who won with ease; an Aberdeen-Angus from the Messrs. Casswell's herd at Quading took second honours for Mr. W. H. Bowler, and the third place was occupied by a Sussex from the Earl of Derby's herd.

Sheep were, as a whole, better than we have seen for some time, but the increase was entirely in the Southdown and cross-bred classes—in fact, it is many years since we found so poor an entry in the Kent and Romney Marsh classes. In the wether lamb class only one competitor came to the fore, Mr. C. Gordon Neame, whose pens were first and r.n.; the same competitor was first and second in the wether class, but neither of these pens were so good as those that represented the flock twelve months previously at the same show. The Southdown wether class had for its winners a very typical pen full of quality and good flesh, from Mr. F. Elmer Spud's flock, that were made r.n. for champion honours. The Duke of Devonshire come in for second honours, but whilst being of good merit they were not quite so well covered as the leading pen. Mr. W. M. Cazalet was to the fore in the class for ewes; his two pens were well fed and handled well, and they were put first and second. The wether lamb class was fully an average one for this show; Mrs. Montefiore came to the front with a pen of well grown and good-fleshed lambs; these handled well, and were made winners of the champion prize; the Duke of Devonshire came in for second honours with a well-grown pen of lambs, but not quite deep enough in the flesh.

The tenant farmer classes were better supported than last year, and the auction class secured a very good entry; some of the pens found in these classes were well-fed and good mutton sheep. The pig classes were better than last year; some very good animals were included amongst the winners. Roots, poultry, corn, and fruit were also on exhibition, and in each case there was a very good entry; the competition in the root and poultry classes was very keen indeed.

Scottish National.

The ninth show of the Scottish National Fat Stock Club was held on Wednesday and Thursday last at Edinburgh. Entries were good and rather more numerous than a year ago. Shorthorns were few in number, there being only five animals in the three classes. In the young steer class, Mr. John Ross, Meikle Tarrel, was first with his roan "Linus." In the class for steers above two years, Captain Stirling was placed first with a thick, blocky ox bred by Mr. Finlay Munro. Only one heifer is shown, and she comes from the Meikle Tarrel stock, that well-known herd of Mr. Ross', the first prize for young Aberdeen-Angus steers goes to Mr. Turner, Cairnton of Boyndie, which was reserve for the breed cup. The King was second and third with a pen of bullocks. There were only two steers in the young class, and Mr. William Watt, Middlefield, was first. The pick of the show came in the heifer class, and although only two were entered, they provided not only the champion of the breed, but the champion of the show, and the animal which will go forward to Smithfield next week as a strong competitor against all the English breeds. Colonel M'Inroy's heifer is one of the best of the breed that has been seen in recent years.

The Galloway breed of cattle made a creditable appearance, the entries being much larger than on some former occasions. Among the Highlanders in the younger steer class Sir Wm. Ogilvy Dalgleish of Errol led with a very big bullock for his age of good length and well balanced. The second, shown by Sir John Gilmour of Montrawe, is a steer of great substance, and certainly very ripe, but wanting is breed character. In the female class Sir Wm. Ogilvy Dalgleish won with probably the best Highland heifer seen in the market. "Lass o' Gowrie" is of extraordinary thickness, and easily won the breed cup, Lord Southesk's first prize steer being reserve for the honour.

Mr. Turner of Cairnton headed in the young cross-bred steer class with a very big steer, which stood reserve for the breed cup, being followed by a very nice bullock from Meikle Tarrel. In the older class the premier place and the breed cup was won by Mr. Thomas B. Earle, York, with a first-class steer, rather overdone, however, but good over the top and loin. Amongst the heifers in the younger class, Mr. Ross achieved honours with a pretty little thing of first-rate quality, and Mr. Wm. J. Robertson, also from Ross-shire, was second with a thick, low-standing heifer. In the older class of heifers Mr. Alex. Smith, Findowrie, Brechin, won with a female which was not the heaviest of the class, but was of great quality.

The judging of the championship awards was witnessed by a large gathering round the ring, and the decisions of the judges were received with general approval. For the best steer the choice lay ultimately between Mr. Arnot's cross-bred ox, Captain Stirling's Shorthorn, and Mr. Earle's cross-breed winner. In the end the verdict was in favour of Mr. Arnot's animal. Captain Stirling's Shorthorn being reserve. In the heifer competition, interest centred mostly in four of the animals presented to the judges, these being Colonel M'Inroy's cup-winner, the Meikle Tarrel Shorthorn, the Errol Park Highland cup-winner, and Mr. Brown's Galloway heifer. The judges followed popular opinion when they awarded the prize to Colonel M'Inroy's Black Poll. The final tussle for the championship now lay between Mr. Arnot's cross bullock and Colonel M'Inroy's Aberdeen-Angus heifer, and the judges did not take long to decide between the two, and their award in favour of the Polled heifer was received with much approval.

The sheep classes were better in point of quality than any of the exhibits at the previous shows of the Club; and it says a great deal for the excellence of the stock that the judges had considerable difficulty in allocating the prizes. Blackfaced sheep were an exceptionally good show. The lamb class was headed by a pen owned by Messrs. A. and W. Burns, Rosyth, this trio weighing 407 lb. The lamb class in the Cheviot section was headed by exhibits owned by Mr. John Stewart Clark, Dundas Castle, the first prize winner being sired by a Leaston ram. Cheviot wedders were a small but excellent class, and Mr. M'Dowall had no difficulty in gaining first and second honours. His first prize pen were so outstanding that the judges had no difficulty in awarding them the premier breed ticket. This seemed to be the more remarkable when it is remembered that the same animals, two of which are twins, were passed over as lambs last year; and the quality of these exhibits may be better gauged when it is said that they were selected for championship honours as the best pen of sheep in the show. The best pen of cross-breds was owned by Mr. Alexander Smith, Findowrie, Brechin, and in the extra classes Mr. William Ford, Fenton Barns, had the distinction of being reserve for the championship. Pigs made a remarkably good display, but were only of local interest.

JUDGES. Cattle.—Shorthorns, Aberdeen-Angus, and cross-bred cattle: Messrs. George Harrison, Gainford Hall, Darlington; Wm. Wilson, Coynachie, Gartly; and H. Milne, Haymarket Terrace, Edinburgh. Galloway, Highland, and President's prizes: Messrs. James Phillips, Carse, Kirkcudbright; Duncan M'Diarmid, Camusericht; and Andrew Young, Forrestfield, Kelso. Extra class and dairy cows: Messrs. Adam Boazman, The Hermitage, Kelso; Andrew Wood, Edinburgh; and Charles Harrison, Tems House, Giggleswick, Settle. Blackfaced, Cheviot, and half-bred sheep: Messrs. James Greenshields, West Town, Coalburn; George Douglas, Hindhope, Jedburgh; and Hugh Lawrie, 40, Madeira Street, Leith. Crosses and extra classes: Messrs. James Thomson, Haddington; Wm. Jackson, Symington; Chas. Robertson, Crosshill, Glasgow.

Annual Meeting.

The report of the Council of the Scottish National Fat Stock Club to the annual meeting of members, held on Thursday, stated that the accounts are in a satisfactory state, the balance at credit being £469 7s. 8d., against £356 11s. 1d. in 1904, £370 6s. 5d. in 1903, £287 18s. 11d. in 1902, £235 10s. in 1901, £131 5s. 4d. in 1900, and £73 at the close of the books in 1899. The number of members on the roll at September 30 last was 686, against 676 at September 30, 1904. The Council are anxious to have a membership of 1,000, and they respectfully ask the present members to get their friends to join.

Transactions in Store Stock.

(Reported to the Department of Agriculture and Technical Instruction for Ireland.)

Roscrea, co. Tipperary, November 29.—Large fair, and good demand for any cattle in condition, but thin animals neglected. Calves, 2nd class £3 10s. to £4 10s., 3rd class £2 12s. 6d.; yearlings, 1st class £8 10s. to £9 10s., 2nd class £7 to £7 15s., 3rd class £4 17s. 6d. to £5 15s.; two-years-old, 1st class £12 to £13 10s., 2nd class £9 10s. to £11 15s.; three-years-old, 1st class £13 to £15, 2nd class £10 10s. to £12 12s. 6d.; springers, 2nd class £13 to £13 15s., 3rd class £10 10s. Small supply of lambs; demand good. Lambs, 1st class £1 12s. to £1 14s. 3d., 2nd class £1 5s. to £1 11s. 6d.

THE FARMERS' CLUB.

The Quality and Yield of English Malting Barley.

A paper on "The Quality and Yield of English Malting Barley," by Mr. E. S. Beaven, Warminster, Wilts, was set down for reading at to-day's meeting of the Farmers' Club, and from an advance proof we make the following extracts. We may mention that the paper is an unusually long one and deals most exhaustively with the subject, and to the grower of barley, is full of interest:—

Paper to be read before the members of the Farmers' Club, on Monday, December 4, 1905, by Mr. E. S. Beaven, Warminster Wilts, on "The Quality and Yield of English Malting Barley."

Barley of one sort or another can be grown under almost any climate and soil conditions. Amongst a collection of plants comprising several hundred varieties which have been grown at Warminster for several years, and for aid in the accumulation of which I am greatly indebted to the Board of Agriculture, there are barleys grown originally as far north as Iceland and as far south as Abyssinia. Barley is in fact more widely distributed than any other cultivated plant, and can be grown under more diverse conditions; only certain climates, however, give barleys which are good for the special purpose of malting, and there is not much relation between the value of the grain for this and for other purposes.

England has richer soil and less sunshine than many other good barley-growing countries, yet the average quality and also the average yield of barley are better than on any other area of equal size in any part of the world and they are often combined. Allowing that this is in spite of our variable climate and largely because the practical knowledge of the British farmer enables him as with so many other problems to adapt his methods, on the whole successfully, to natural conditions, yet there must be a good deal to be said in favour of our soil and climate for barley growing. "Our soil and climate" is however too vague an expression, since both vary so much and it may be useful in the first place to try to connect what definite data we have with reference to the distribution of the barley-growing area and the average yields in different parts of England with what we know about the soil and climate generally in the same districts. Even so, only some very general conclusions can be hoped for.

Soils.

If we draw a line from Bristol through Derbyshire to Berwick-on-Tweed, there is no considerable barley-growing district to the west except in Shropshire. It is mainly a grazing district, and of the small area under cereals there is a large and increasing proportion of oats as compared with barley. The soil of this western district lies mainly on the primary formations. The coal measures stretching across the country approximately in the same line divide the primary rocks on the west from the secondary strata on the east, except in Cheshire and Shropshire.

It must be something more than a coincidence that there is this relation between the character of the strata and the position of the barley-growing districts, even allowing that the higher rainfall in the west may be a largely controlling factor in separating arable from grazing districts. A similar relation extends further, for as we go east and south and come to the soils of still later origin, viz., those overlying chalk and tertiary strata, there is again an increasing area of barley land and grain of better average quality. The broad belt of lias and oolites stretching from Dorset to Lincolnshire is not generally overlaid with as good barley soil as that overlying the chalk and the more recent formations to the south-east of a line from the Bill of Portland to the Wash. With a few exceptions the best barley soils are the soils associated with the more recent formations, and some of the best soils of all are those of the glacial drifts.

The red soils of the new red sandstone and permian formations in the West Midlands and the South-West are an exception, for these give on an average quite as good or better yield and quality of barley than the stonebrash and gravelly soils of the oolites. The broad belts of clay also, occurring in the lias, oolites, weald, and the gault are of course an exception of the reverse kind. These mostly occupy the vales, and except where they are overlaid with drifts comparatively little barley is grown on them.

Generally speaking, the so-called sedentary soils, that is, those resulting from the weathering of the strata immediately underlying the surface are not as good barley soils as the other class of soils known as transported or drifted soils, and which are of much more mixed origin. This especially applies to shallow soils with practically no subsoil.

If an attempt is made to classify the soils of the English barley-growing districts in order of merit, taking into account quality and yield combined, they would probably fall into something like the following order:—

1. Drift overlying chalk and tertiaries in the Eastern Counties.
2. The lighter red soils in the South-West and Midlands.
3. Tertiary and recent soils of the Thames Valley and South, including Isle of Wight.
4. Chalky soils on the slopes of the Wolds, the Chilterns and the Downs.

Climate and Seasons.

The average temperature and rainfall are very different in some parts of England to others, and it may be worth while to endeavour to see if there is any relation between, on the one hand, average temperature and rainfall in different districts, and, on the other hand, the average yield and quality of the barley produced in the same districts. For this purpose attention may be confined to the larger barley growing districts, viz.: the North-East, the East, the South-East, and the South-West.

The following table gives the approximate average temperature and rainfall in these districts, and also the average yield calculated from the returns of the Board of Agriculture for the past ten years.

Barley Districts.	Mean Annual Temperatures. first q'rter.	second q'rter.	third q'rter.	fourth q'rter.	year.	Average yield, barley 10 yrs. bush.
N.-Eastern	38.9	50.1	57.6	43.7	47.3	35.1
Eastern ...	38.8	51.0	59.0	43.1	48.0	34.3

S.-Western	43.4	53.2	59.9	47.6	51.0	31.3
Kent.....	—	—	—	—	50.3	37.9
No'th'mb'ld	—	—	—	—	47.0	35.8
Cornwall ...	—	—	—	—	52.0	32.0
Hunts	—	—	—	—	49.0	30.1
	Average inches of rain.					
N.-Eastern	5.10	5.55	7.67	7.7	26.1	35.1
Eastern ...	5.35	5.44	7.68	8.0	26.5	34.3
S.-Eastern	6.17	5.45	7.34	8.5	27.5	32.7
S.-Western	10.73	7.08	9.85	13.9	41.5	31.3
Kent.....	—	—	—	—	2 .0	37.9
No'th'mb'ld	—	—	—	—	28.0	35.8
Cornwall ...	—	—	—	—	51.0	32.0
Hunts	—	—	—	—	23.0	30.1

The averages taken over the larger areas seem to show that the highest yields are in the driest and coldest districts and vice versa, but there are exceptional areas within the larger districts. Kent, with an estimated yield higher than any other county in England, is one exception. Huntingdon, on the other hand, which is the driest county in England, has a much under average yield; lower than Cornwall, which is almost the wettest. Averages of all kinds are apt to be very misleading; in this case there is moreover some doubt as to the accuracy of the figures which are averaged, but when we take a large area there is a probability that errors may to some extent balance each other.

As with soil conditions, so with climate and seasons, the effects on yield and quality of barley are so complex as almost to defy any attempt at a summary statement.

The arable districts on the east side of England are the driest and coldest. They give on an average higher yields of barley than the warmer and moister districts in England where there is a much lower proportion, and a diminishing proportion of arable as compared with grass land. On the other hand, the higher temperatures and even in not a few seasons the higher rainfall of the south and south-west are favourable to quality. As to seasons, deficient yield is as often due to drought as to excessive rainfall.

It is hardly to be expected that any relation would be traceable between yearly or even quarterly rainfall and quality of barley as between different districts, seeing that it is the weather (and by no means the rainfall only) of the two critical months before and during harvest which, more than all other conditions combined, determine quality. But admitting this, there are fairly definite characters attaching to the barleys of different districts year after year, combined with fairly constant differences in yield, and the conclusion is that over a series of years it is as much or more the character of the soil than of the climate which is the determining factor.

Average yields over a long series of years are about as follows:- England, 32 bushels; Scotland, 36 bushels; Ireland, 40 bushels. Variations of the average for England in different years are about from 26 to 36 bushels. Judging from the results of such manurial trials as are available, artificial soil conditions (cultivation and manuring) give maximum differences of about eight bushels under ordinary farming conditions. Lastly, as will be shown later as between different varieties under equal conditions, there is an average range of about four bushels.

Quality

The problem of the relation of quality and quantity, and how, if possible, to combine them, presents difficulties in most industries. It was raised by Mr. Hall's recent paper on wheat. We know what good yield means, but a definition of quality which would be generally accepted presents a host of difficulties. Assuming grain to be of possible malting quality, in respect of ripeness, condition, and vitality, which are essentials, and which are fairly well indicated by the colour of the grain, it would be a good thing if we could further define quality in terms of something which is intrinsic in the grain, and which is also related to the same conditions of cultivation which affect yield.

Now the quality of barley, like the strength of wheat, depends largely on the conditions of growth and maturation, and if we could say definitely that there was something in good barley which corresponds to either strength or weakness in wheat, it would be a useful point to make, because there would then be a strong presumption that the condition in respect of climate and soil which gave the one would be in favour of the other also.

An attempt was made by Dr. Munro and myself in 1897 to show the relations which exist between composition of barley in respect of different kinds of nitrogenous bodies on the one hand and malting quality on the other. The results which were obtained in a long series of analyses made on barley of different varieties and grown under widely differing conditions pointed to a particular kind of nitrogenous matter, differing from other kinds in respect of its solubility as being directly connected with malting quality, and as being in excess in stiff working grain. The properties of this substance have been fully investigated, although not in relation to malting quality, by Dr. Osborne, of the Connecticut Agricultural Experiment Station, and he had shown that there is a very similar body present in the gluten of wheat.

The next point is that this substance is present in large proportion in strong wheats and in small proportion in weak and starchy wheats. There are other points of resemblance. Both free working barleys and weak and starchy wheats mellow easily in the field, and are floury rather than steely. In both the mellow stage quickly succeeds the ripe one. There is then a distinct parallel between weak wheats and free working barleys, and the most simple expression for the character they have in common is low nitrogen content in proportion to starch.

When we turn to the conditions which gives low nitrogen content in wheat and in barley respectively, the parallelism is not quite so clear. It is largely a question of weather, but still the soil is a very considerable factor. That this is the case may be illustrated by Mr. Hall's table showing the difference in strength of wheat in the same season on different soils. Take the extreme cases (1) of wheat grown in the fens, and (2) on the light chalk soil at Wye. The fen land grew wheat with higher nitrogen content, whichever variety was sown. It also, doubtless, although the figures are not given, gave a much higher yield, and there is no doubt that if barley had been grown alongside these wheat plots the fen land would have also given a larger crop of barley than the light chalk land, but of higher nitrogen content. The parallel also generally holds good in countries where soil and weather conditions are quite different to our own. California, for instance, always grows weak wheat and free working barley.

Varieties.

With wheat, unfortunately, the strong varieties are not as good yielders as the weak sorts, and if we want a heavy crop we have at present to select one of the varieties which generally gives a comparatively weak grain, and a comparatively low nitrogen content. But this combination of high yield and low nitrogen is just what is wanted in barley, and the barley problem would be solved if we could get it. It is easy to do this with wheat where the combination is not wanted. Why is it so difficult with barley where it is wanted?

The answer, as far as can be seen at present, is that differences in composition of grain are not so persistent in different varieties of barley as in different varieties of wheat. Whereas with wheat, if we take seed of a certain variety (or even of a mixture of grain differing botanically, but which has been so long grown in a climate favouring strength and high nitrogen as to acquire these characters) we may fairly expect to get a crop of grain showing the same characters, limited to some extent, of course, by soil

and season. This is much less the case with barley. The difference between the two plants is that with wheat the internal character of the seed counts for much in determining both quality and yield.

With barley the external conditions, soil and climate, count for very much more than the previously acquired internal character of the seed. Yet when acquired characters have become so fixed as to constitute a distinct variety, there are differences both of yield and quality due to the acquired characters of the seed in barley, and it may fairly be hoped, with the example of wheat before us, that something may be made of them.

It is probable that all our existing varieties originated from a single wild sort, and became what they now are mainly through the effects of very long continued differing conditions prevailing in different localities. The extent to which barley varies under climatic conditions and retains its acquired character after transplantation is illustrated by some specimens of the progeny of seed coming from various parts of the world and grown for several years in succession at Warminster. All these plants have been grown year after year from the progeny of single ears or single plants. This is the best way of studying the value of acquired characters. If this could be systematically done under different conditions of soil and climate there would be hope of discovering which of the existing varieties best suits particular soils under the average climatic conditions prevailing.

Straw.

After dealing at considerable length on the different varieties, Mr. Beaven came to the question of straws, and concerning this he said:—For good quality of barley the straw must be dead ripe. Unfortunately, dead ripe straw has a low feeding value. The recent decline in the acreage of barley has therefore been greatest in grazing and dairying districts, because oats can be cut when less ripe and the straw is better food. The "lodging" question is, however, still more serious.

When barley goes down just as the grain is ripening off, the whole plant often leans from the crown of the roots, which is generally about half an inch under the surface. This can hardly happen without the roots being to some extent loosened, and therefore probably depends either on the condition of the soil or the strength of the roots. Whether or not the Archer type of barley is the more strongly rooted, it will generally be agreed that Archer barley does not go down at this stage as easily as Chevallier.

This year there was probably less actual lodging than usual, but a good deal of Chevallier barley was, as in many seasons, badly "knee bent" at the uppermost "knot" or node. This generally happens after the grain is ripe and in an interval during which adverse weather may prevent cutting. It seems with Chevallier barley to be directly due to the length of the internode between the last joint and the ear. Barley generally has five or six internodes, and the relative lengths vary considerably. Plants of the different varieties grown side by side at Warminster showed the following average differences:—

	Archer. Inches.	Chevallier Inches.
Average length of straw from root to crown to base of ear	33	35
Average length of last internode or "neck"	11	15

Now in Chevallier barleys the knots appear to be the weakest points, and if the last internode carrying the spike is very long it does not take much wind or rain to bend the straw at the last "knot." Whole fields of barley can often be seen with almost every stem "kinked" at this point. The quicker the growth of the plant, the weaker are the knots, because growth of the young tissue of the stem takes place up to time of ripening at just these points. Archer barley with a shorter neck seldom gets "knee bent" to the same extent as Chevalliers, because the leverage of the ear acting upon the straw at the "knot" is not so great.

Goldthorpe and the other wide-eared barleys have a thicker stem and shorter knots, and, moreover, although the last internode is long the head does not fall over so much. There is, however, a tendency for the straw to get "kinked" or "neck bent" near the ear, and this is much more serious than being "knee bent." With "neck bent" barley of the wide-eared type there is much loss from breaking. With "knee bent" Chevalliers, although there is some discolouration of the grain due to the ear falling near the ground, the stem does not often break.

Unfortunately the stem or rachis of the ear is generally brittle also in the wide-eared sorts so that very little rough handling causes the ear itself to break. Lastly, the awns of these sorts are brittle, and have a tendency to break off and leave the grain "beardless." It is a doubtful point whether this is a good thing or otherwise.

Amongst about twenty quite distinct wide-eared barleys grown at Warminster, some always ripen later than others, and the later ripening ones seem to be the toughest, and one at least of these sorts, distinctly later than all the others, has been for four years following best in point of colour of the grain and has a consistently low nitrogen content. This is grown up from one of about 140 different kinds of barley, all quite distinct, which were kindly sent to me in 1902 by Mr. Karl Hansen, of Lyngby, in Denmark.

Mr. Hansen, in reply to a recent inquiry, informs me that he selected this barley from a Swedish sort known as "plumage korn." It seems probable that the later ripening and tougher straw go together, and that this barley may combine some of the good qualities of Archer and Goldthorpe.

Thanks to the activity of the representative Agricultural Society of Denmark, and to the remarkable and complete system of trials here described, there is now a general agreement there on the part of all who are interested in barley with regard to the respective good points of the various types. Our conditions are much more complex owing to the greater differences in soil and climate in different parts of England. I suggest, however, as matter for discussion whether it would be possible, beginning perhaps on a small scale, and starting with the information already in hand, to commence a co-operative series of trials, starting in each locality with seed grown up from single ears of known and common origin, in order if possible to determine which type of barley is best suited for different conditions in England. In course of time it would then be possible to say much more definitely than we can now to what extent by suiting varieties to soils and situations there was a prospect of combining yield and quality.

Shropshire Sheep Breeders.

The annual meeting of the Shropshire Sheep Breeders' Association and Flock Book Society was held at Birmingham on Monday, under the presidency of Mr. J. Bowen Jones.

The report of the Council showed that the total worth of the Society was £1,415 18s. 9d. Of this sum £1,207 14s. 7d. was in respect of investments, and £108 4s. 2d. was cash in hand, while the net cost of flock books on hand, £207, was valued at £100. The export trade during the year had been very satisfactory. No sensational prices had been realised, but an absolute clearance had been effected, and it was with difficulty that foreign orders at the close of the auptumn could be filled satisfactorily. Altogether 1,032 sheep were exported, 253 to the United States, Canada, and Newfoundland, 497 to South America, 153 to Australia, Tasmania, and New Zealand, 54 to South Africa, Algiers, and Algoa Bay, and 75 to Russia, Germany, France, Spain, Denmark, Sweden, Hungary, Jamaica, and Finland. In the previous year the number of sheep exported was 703, and in the year before that 788. A very extensive trade in high-class sheep had been done with Australia, Tasmania, and South America, and there was every indication that the demand was likely to expand considerably. At home the breed had been well exhibited, and the greatest interest attached to the awarding of the prizes at the Royal, the Shropshire and West Midland, and the other leading shows. The interest at the Royal Show was increased owing to the liberality of an anonymous donor, who gave £50 to establish a selling class, which proved a great success. The Council recommended that a sum not exceeding £150 should be set apart as prizes at the shows next season for the purpose of promoting the interests of Shropshire sheep breeders and making more widely known the special attributes of the breed.

The Chairman, in moving the adoption of the report and accounts, said that £50 more was allocated in prizes last year because of the gift of the sum by an anonymous donor to establish a selling class at the Royal Show. That ensured the success of the class. Mr. R. P. Cooper had now offered £50 for the same purpose at next year's Royal Show, and it was to be hoped that the number of entries would be very large, and that the class would prove as successful as last year. The number of animals exported was 1,032, which was almost a record. In 1899 about the same number was exported, but since then the trade had steadily increased. The financial year terminated on September 29, and since then 312 sheep had been exported, as compared with 154 in the same period of last year.

Mr. R. P. Cooper seconded the resolution, observing that the prospects for Shropshire sheep were never brighter than they were now.

The resolution was carried unanimously.

On the motion of Mr. R. P. Cooper, seconded by the Chairman, a vote of sympathy with Mr. H. P. Ryland in his illness was adopted.

A vote of thanks was accorded Mr. R. P. Cooper for his generous gift, and a similar compliment having been paid the Chairman for presiding, the meeting closed.

Royal Lancashire.

The annual meeting of the Royal Lancashire Agricultural Society was held at Preston on Wednesday, under the presidency of Mr. H. L. Storey, Lancaster. A most satisfactory report from the Council was presented and adopted, and from it we take the following:—

The operations of the Society during the year 1905 have been attended with a measure of success which, taking into account the unfortunate climatic conditions under which the show was held, must be considered eminently satisfactory. Your Council have pleasure in congratulating the members upon the substantial addition (£1,607 9s. 11d.) to the Society's general balance, and the undoubted gain in its prestige which have resulted from the visit to Liverpool.

The local enthusiasm and practical co-operation which have become traditional features in connection with visits to Liverpool, were again forthcoming on the present occasion, and it is in a large degree due to the very handsome sum of £1,957 12s. 9d. handed over by the Local Committee that the balance-sheet submitted to-day is so satisfactory.

The serious falling-off in the gate receipts on the three first days of the show was partially retrieved by the fourth day's result, when 42,084 persons paid for admission. This is the largest single-day attendance which the Society has yet had, and is the more gratifying from the fact that the weather broke down at an early hour in the afternoon, and doubtless prevented many from attending. The general balance in favour of the Society now stands at £12,007 8s. 10d.

During the year a very satisfactory number of new members, viz.:—5 vice-president members, 6 life members, and 132 annual members—has been enrolled, whilst 79 have been removed through death and other causes. The total number of members at present on the Society's books is:—Presidents, 5; vice-presidents, 114; vice-presidents (life members), 9; hon. vice-president (life members), 3; life members, 73; hon. life members, 7; annual members, 1,161; total, 1,372.

Your Council feel that the present is a most opportune time in which to recognise the very great services that the Rev. Leo. Charles Wood, C.A., Chairman of the Agricultural Sub-Committee and the Diseases of Animals Acts Committee of the Lancashire County Council, has rendered in the cause of agriculture, particularly in Lancashire. Mr. Wood, for upwards of forty years, has devoted his great abilities and energies to the furtherance of agricultural knowledge, and especially in connection with technical education in agriculture. It has therefore been decided to mark the Society's appreciation by conferring upon him the honorary vice-president life membership of the Society.

At a special meeting of members held in the Liverpool show-yard, an invitation for the 1906 show was presented by an influential deputation from Lancaster and district, including their worships the mayors of Lancaster and Morecambe, the President of the Lancaster Agricultural Society (Councillor Geo. Jackson), Herbert L. Storey, Esq., D.L., Colonel W. H. Foster, J.P., W. Fitzherbert-Brockholes, Esq., D.L., Edward Barton, Esq., J.P., A. J. Clarke, Esq., J.P., and H. J. Coulston, Esq., J.P. The invitation was unanimously accepted by the meeting, and from the very cordial expressions of welcome which characterised the speeches made by the deputation, as well as the zeal with which the preliminary arrangements have been entered into by the Town Councils of Lancaster and Morecambe, your Council have every confidence that the visit to the county town will be alike beneficial to the district and the Society. The site placed at the Society's disposal is at Scale Hall, situate halfway between Lancaster and Morecambe.

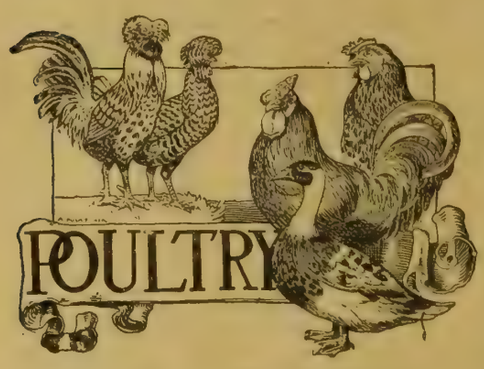
Mr. White, who moved the adoption of the report, said they had had a very successful year, and a record show in all things except the weather of the first two days. The experiment, undertaken with some anxiety, of fitting up the show-yard by the staff of the Society, had proved very satisfactory. The shedding and other accommodation required for this year's show would have cost £1,100 more if it had been provided on the old lines.

The Society unanimously elected Mr. H. L. Storey as the new president, and Mr. Storey, in a speech of thanks, claimed it a great honour to be the president of "the best agricultural society in England." Mr. Storey presented to Mr. John Lea, ex-Lord Mayor of Liverpool, and to the Rev. L. C. Wood, framed certificates of life membership of the Society as vice-presidents. The presentation was made to Mr. Lea as the highest acknowledgment in the Society's power of dis-

posal of the share which Mr. Lea took, as Lord Mayor of Liverpool, in promoting the success of the Liverpool show. The presentation to Mr. Wood was in recognition of his long years of service to agriculture. Mr. Park spoke of Mr. Wood as the Grand Old Man of Agriculture—in a national as well as a county sense—and Mr. Wood, in reply, contrasted the flourishing condition of the Royal Lancashire Society to-day with the difficulties he had to face when he first took up its work. He spoke of the great help which the Society afforded to agriculture by the encouragement of its shows, and commended the joint effort of the Society and the Lancashire Council in encouraging students of agriculture at the Harris Institute and at the Farm School.

It was decided to hold next year's show at Lancaster on August 2, 3, 4, and 6. The twelve retiring members of the Council were re-elected.

Nearly every speaker at the meeting referred in terms of warm appreciation to the excellent services given to the Society by the secretary, Mr. Edward Bohane, and at the end of the meeting a resolution that an honorarium of £100 should be given to Mr. Bohane and £25 for distribution amongst his staff was proposed and carried with acclamation.



Turkeys for Christmas Fattening.

The season is now here when those who supply fattened birds for the Christmas markets must commence that special feeding which the birds require in order that they may appear to the best advantage, and, as a result of this, realise the highest possible price. At one time turkey rearers used to pay but little attention to their flock, and those which were to be bred from were selected in a haphazard way; and when the young birds were growing, and looked the reverse of promising, their owners trusted to the few weeks' special feeding before they were killed to convert them into fine plump birds. Year after year the birds disappointed them, and then they found out, by comparing notes with those who produced fine birds, which at all times command satisfactory prices, that their stock birds were the cause of failure. Year after year there are hundreds of birds sold in the market at prices which cannot possibly pay those who reared them.

It has already been our contention that the better bred stock gives a much better return for the food they consume than those of inferior quality; and, as it behoves everyone to make as much profit as possible, those who have not hitherto been successful with their turkeys would do well to improve matters by purchasing a few fine turkeys from a reliable breed, taking care that they are unrelated, and then giving the young birds careful attention through the summer, and, by the time next Christmas is here, they will find that it is much more profitable to rear good birds than bad ones. Good feeding will not correct errors in breeding, and it will not be found possible to turn out well-fattened birds when the frames of the birds are small, and the stock lack that stamina so necessary to make them a complete success.

When once people are convinced that a certain class of bird pays better than those they already have, they usually go in for the most profitable birds at once. There is always a big supply of small birds on the market at Christmas time, and prices rule low for these, so that it pays breeders who have younger birds coming on to run them on until after Christmas, when better prices will be made for them. Where there is a large number of birds it is a good plan to separate them into three lots—the finest cockerels in one lot, then the medium-sized birds, and the small ones can be kept by themselves. Where only a few have been bred, this is not advisable, as they fret if separated from their companions, but it is entirely different when the three flocks are of a good size.

The feeding of the birds is a very important matter. They require liberal treatment now, and then at the commencement of the first week in December they should be taken in hand and have three weeks of special feeding and very little liberty. It would not answer to keep the birds shut up from now until they are killed, as they do not stand more than three weeks of this really well, but it is quite time they had food of a fattening kind.

The morning meal now should consist of ground oats mixed with prepared fat and milk. It is a great advantage to use milk to mix the food with, as this fattens the birds; and the flesh of the turkey, or any class of poultry, which have had milk in their food is of much better quality than those which have not. For a change, barley meal with a small quantity of locust mill or pea meal may be given.

The birds should always have some prepared fat mixed in their food. Until the last few weeks they should have from one to one and a half ounce each, when they should each have two ounces; then at midday the birds should have a small feed of boiled wheat and boiled maize on alternate days, and at night barley and oats on alternate evenings. In the event of them not caring for the oats, maize may be substituted one evening, wheat the next, and barley the next, making a change for them.

The birds should not be encouraged to roam about, as this is against the accumulation of flesh, yet they must not be shut up; at the commencemen of the last week in November they should be kept as much as possible to ground oats, two-thirds, and maize meal, one-third, mixed with milk with prepared fat already mentioned. A good meal should be given as soon as the birds are let out at mornings, so as to allow plenty of time for that to become assimilated, and the birds to have an appetite before the midday food. If they get their breakfast late, they will not be ready for their dinner; this should consist of a mixture of the same as that given for breakfast, one day, and boiled paunches or lights (cut up finely) the next. This provides a nice change for the birds, and one which is appreciated by them.

We always find it better to boil their grain for the evening meal every other day. Care should be taken to see that the corn is well boiled, but that it has not burst and become sticky, as the birds do not like it in this condition. It should be placed in the copper or boiler and well covered with water, and allowed to boil gently. After it has come to the boil, it answers quite as well as if just simmered. It should be stirred occasionally to prevent it from sticking to the bottom of the copper, and should not be burnt. It is no trouble if the one who feeds the birds is at hand to give it a stir.

Other foods, such as barley meal, maize meal, and middlings, may be substituted for the ground oats if the birds appear to go off their feed, as it is very essential that this should be avoided, because they quickly go down in condition if they lose their appetites.

A very good change can be provided for the birds by soaking crushed maize in boiled skimmed milk for an hour. The maize is crushed by being passed through the grinding machine, which most farmers possess, and which is worked by a horse; and then it is placed in a pail, and the boiling milk poured over it, and the pail should be covered up so that the steam is retained. Those who fatten their birds most successfully are those who "keep them eating."

As soon as the bird is noticed to be eating less, it should be caught, and a dessertspoonful of castor-oil, which has been made warm, given. It is most important that the birds should be kept to their food, as they very quickly lose their condition if they do not feed well. A dessertspoonful of sharp flint grit should be mixed in their soft food for each bird once a week, as they cannot digest their food and derive the full benefit from it unless they are supplied with this.

The plan adopted by many successful turkey rearers who live on farms is to allow their birds two of their large barns, or parts of two barns, covering the floors with clean straw, or short chaff, so that it is comfortable for their feet.

At the commencement of the first week in December the young turkeys should be kept entirely in barns or outbuildings to finish off before being killed. Three weeks is occasionally too long for their confinement, as some birds can only thrive for about sixteen days under these conditions; but the feeder must use his discretion as to this, according to the condition he finds the birds in when handling after they have had the special feeding referred to in our last number.

"PAYING POULTRY"
is the book you need if you would make your poultry keeping a SUCCESS.

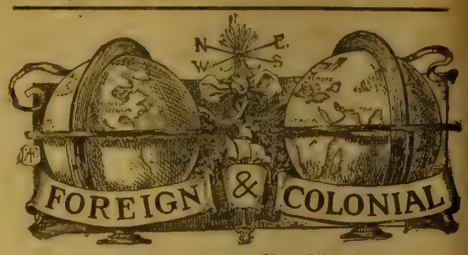
COMMERCIAL PACKING ILLUSTRATED.
Further information can be obtained at the office of the Agent-General for British Columbia, Salisbury House, Finsbury Circus, London.



Land Settlement in Victoria.

With reference to a letter from the Secretary of the Sydney Labour Council which appeared in the Press, wherein he stated that Victoria is practically settled and cannot receive more immigrants, the Agent-General for Victoria writes us that this is quite a misapprehension. At the present moment the Government are purchasing large estates, which are being made available under the Closer Settlement Act, which is most liberal and not complicated. As showing the advantageous terms on which land may be acquired in Victoria, it may be stated that the law permits farmers to purchase allotments of land up to £1,500 in value, and agricultural labourers' and workmen's land up to £200 in value, both on terms extending over 31½ years.

With regard to the agricultural labourers and workmen, the only improvements insisted on are that the agricultural labourer should build a house to the value of at least £30, which must be erected during the first year, and enclose the land by a fence at the end of the second year. The repayments are made on the Credit Foncier system, and power is given by the Board to advance pound for pound up to £50 to assist agricultural labourers towards the cost of fencing and building.

The Government, under the Land Act of 1898, purchased 33,660 acres at a cost of £200,000, on which are now settled 239 families, and, since passing the Closer Settlement Act, 1904, it has been authorised to expend £420,000 in the purchase of seven estates comprising 77,200 acres. So far, 3,000 acres only have been disposed of, and 12,000 acres are available under most liberal terms.

West Riding Chamber of Agriculture.

The annual meeting of the West Riding Chamber of Agriculture was held at Wakefield on Friday. Major Beadon (Huddersfield) presided in the absence of Sir Thomas Pilkington, and opened a discussion on the increased valuations of small holdings through the extra number of stock kept, and especially through the keeping of more stock than such holdings will accommodate. He contended that if no remedy was found small farmers would certainly be ruined, and added that everything is against the struggling farmer, and it is not right. Other members spoke on the subject, and finally the secretary undertook when he gives evidence before the Parliamentary Committee on Small Holdings, to raise the point so that the matter may enter into their report, because the tendency of the practice in this district was in the direction of the reduction of rents. A resolution was adopted, on the motion of Mr. Haworth, seconded by Mr. Kilby, condemning the law of trespass as obsolete and ineffective, and favouring its amendment, particularly in the direction of providing protection of products which, though of natural growth, are of a marketable character. Sir Thomas Pilkington wrote intimating his desire to retire from the office of President, and the position was left vacant. The Hon. J. L. Wood (Templenewsam) and Mr. C. G. Milnes Gaskell were elected vice-presidents; Messrs. L. Twiggo (Wakefield) and A. Pickles (Middlestown) were placed on the General Council; and the other officers were re-elected.

Cakettes FOR Cattle

(Bibby's Patent).

No Trouble. No Waste. No Extra Cost.

BIBBY'S NEW METHOD of Manufacturing Feeding Cakes.

It has been our good fortune, from the commencement of our business career, to have led the way in the production of high-class Feeding Cakes; and our "BIBBY" CAKE, BIBBY'S FEEDING CAKE, and BIBBY'S DAIRY CAKE, with their corresponding Meals, have now for many years taken the first place in popular favour.

We have recently taken another step forward, and have invented a process by which the Feeding Cakes can be turned out in the form of "Cakettes," as shown in our illustration; it is obvious that this improved method of manufacture will save a good deal of time to the Feeder—and what is more it costs him nothing.

So excellent an innovation has attracted the attention of a great many Cake users, and naturally more or less plausible imitations of our "Cakettes" are beginning to loom on the horizon.

We do not complain of this in the least, so long as the Feeder knows exactly what he is buying; for no one is quicker than he at discovering the difference in value between an original piece of work and a more or less successful copy. For the same laws obtain in commerce as in art; and all artists begin by copying the work of the masters in the craft.

But a caution is necessary; no connoisseur of art expects the same perfection of detail in a copy as in the original picture; and a user of Feeding Cakes, when buying an imitation of our "Cakettes," should not conclude therefrom that he is getting a Cake of our quality.

We have been catering for many years for those Feeders who demand—and who will have—

The Best Feeding Stuffs the Market affords;

and we maintain a staff of Chemists and an Experimental Farm, researching all the time after improvements in all directions; and it must be manifest to all that this line of policy is bound to yield the best results obtainable, a fact which any observant feeder will discover for himself if he make careful tests.

We may add that all the most approved methods of producing Cake in this form have been patented by us, and not only is the quality of our "Cakettes" the result of years of the most painstaking research, but the pieces themselves are more regular, shapely, and more satisfactory in every way than can be otherwise obtained.

We have, therefore, thought it but right to bring these facts under the notice of feeders, so that buyers who really want our "Cakettes" may not be put off with an imperfect article, and particularly as the genuine thing can be had at the same price.

We have registered the word "Cakettes" to describe the results of our improved method of manufacturing Feeding Cakes; and buyers who want our "Cakettes" should see that the word "Cakettes" is plainly marked on the bags, as shown in our illustration. If the word "Cakettes" is not on the bags, and you have been sold something "Just as good," we recommend that a practical experiment be made to test the quantity and quality of the milk which they severally yield, for the stomach of a cow is a handy and reliable chemist; and the more the farmer submits the claims of rival Cakes or Meals to practical tests of this kind, the more careful will he be to select the original article, however plausible a copy of it may be recommended to his notice.

FOR FINE HEALTHY CALVES USE

VESTA CREAM MEAL

This, our latest Calf Meal, has been specially made for use with either Skim or Separated Milk, and after the first few days can be used alone.

It is very nutritious, easily digested, prevents scour, and imparts a beautiful sleek skin.

It is one of the richest milk substitutes obtainable, and fine healthy thriving calves are reared on it by the leading breeders of cattle.

It is therefore a *perfect milk substitute.*

T. GITTINS, Esq., Wrentnall Farm, Shrewsbury, says

"I am more than pleased with your Calf Meal, I consider it excellent in every way"

COLQUHOUN'S

Scotch Tweeds & Knitting Yarns.

To the Public.

Scotch Tweeds mean value, and Colquhoun's Ladies and Gentlemen's Scotch Tweeds, Knitting Yarns, Blankets, &c., mean perfection of value. Their wear is magnificent. All goods are made in my own Mills under my own supervision, and nothing is sold as wool that is not pure wool. Any length at Mill price and carriage paid. Self-measurement forms sent, and Suits made up if desired. 400 Patterns, post free. Write for them.

To Wool Growers.

What do you do with your wool? Do you make the most of it? One thing is quite certain. You cannot do better than send it to my Mills and have it made into woollen cloth, blankets, or other goods. I have 400 patterns to select from, and pay carriage on wool sent to me for manufacture. Write for booklet, which tells you all you want to know, and receive patterns, so that you may say what you want made and the patterns you prefer.

A. COLQUHOUN, Dept. 162, Waukrigg Mill, GALASHIELS, N.B.

DALMENY SEED POTATOES. For Quality, Heavy Cropping and Disease Resistance. Grown from selected tubers, specially treated for the production of vigorous seed. Illustrated descriptive catalogue and Prices on application to Manager Home Farm, Dalmeny Park, Edinburgh.

WANTED TO PURCHASE some cheap apple trees, large quantity, Standards and half Standards or Pyramids; must be cheap, don't mind if a bit rough; 1,000 or less. Also English Shallots, any quantity. All for cash. Standford Mill, Swallowfield, Reading.

CHANGE OF SEED
always increases and sometimes doubles the crop.

The Potato benefits more than any other crop by the introduction of FRESH SEED.

This year has again proved the necessity for English growers changing their Potato Seed from Scotland.

The Seed I offer is grown on the high lands of Fifeshire, and from that district they always do well. Most of the new, and all the older, varieties I have grown and tested, and will be pleased to give advice as to what kinds are likely to suit the different soils, &c., and give best results. I have also tried Findlay's latest. These have done exceptionally well.

HOME AND EXPORT.

Write for particulars, stating kind and quantity required.

ROBERT GOLD, SEED POTATO GROWER,
Lundin Links, FIFE, N.B.

MATCHLESS
FIRST EARLY. New Seedling Potato.
Send for Photo of Crop, with full particulars of this grand early Potato.

Read the following Report of Prof. Malden's trials:—

"I have dug your Potato Matchless, and am pleased to say it has turned out very well. In the opinion of those who saw it dug, only one variety has equalled it and none excelled it in all my trials this year."

Orders should be sent as early as possible to save disappointment. Stock limited to 10 cwt.

Scotch and Yorkshire grown King Edwards, seed size, 20th Century, Davie Warrior, Eldorado, Highlander, Sutton's Discovery, Llewellyn, Duke of York, Sharpe's Express, Recorder, Webb's New Guardian, and Midlothian Early.—Apply,

RAILWAY ANNOUNCEMENT.

GREAT NORTHERN RAILWAY.
LEEDS SMITHFIELD SHOW,
DECEMBER 12th, 13th and 14th, 1905.

The Great Northern Railway Company are making arrangements for the conveyance of exhibits from stations on, and in connection with, their system.

Exhibitors should be careful to address their exhibits "per Great Northern Railway." Through vans for the conveyance of exhibits will be run wherever necessary

A Great Northern Company's representative will be in attendance at the show, prepared to give exhibitors and others all information with respect to train service, &c.

OLIVER BURY,
General Manager.

GREAT NORTHERN RAILWAY and CHRISTMAS PARCELS TRAFFIC.—The Great Northern Railway have arranged for the collection, transit, and delivery of all Parcels to and from all towns on their system. Vans will be attached to many of the express trains. Special Parcel trains will be run to meet the additional demands made upon the Company at this period of the year. Reduced rates are now in operation for the conveyance of Parcels traffic by passenger train. The "minimum" weight formerly charged on packages of *perishables* at "Owner's Risk" rates have been abolished, and these parcels are now charged at actual weight. Special frequent collections of parcels will be made from Receiving Offices in London and the Provinces by the Company's vans, and the traffic will be despatched by first trains after receipt. Full particulars as to charges, which will in no case exceed those in force by any other route, can be obtained on application at any Great Northern Station or Receiving Office.

NO CURE! NO PAY!!

SILCOCK'S FATTENING CAKE

Made Specially for Fattening Purposes.

We have made this claim for 12 years, and each year it has been more thoroughly established and confirmed by thousands of farmers.

YOU MAY DOUBT, but test it for yourself as others have done; you will make money by the experiment—we will gain a customer.

It is guaranteed by analysis and practical feeding tests.

We make one cake do one thing well. One cake for all purposes means waste and inefficiency.

SILCOCK'S FATTENING CAKE LIVERPOOL

YIELDS BETTER RESULTS THAN ENGLISH LINSEED CAKE

READ THIS!

Mr. HERBERT LAKE, Crediton, Devon, writes:—
September 4th, 1905.

"I was a great believer in Linseed until I proved that your Fattening Cake is much superior; as a test, I fed one lot of Steers exclusively on your Cake, and another lot on English Linseed (weight for weight), and I was very much surprised to find that the result gave a much greater weight of beef in favour of the Fattening Cake. I can thoroughly recommend your Cake to every farmer as the best (including Linseed) that can be used. Please send me two more tons, ex contract, at your earliest."

We respectfully Solicit a Trial Order.

Our manufactures include Fattening, Rearing, Dairy, and Universal Cakes & Meals, Cotton Cakes, Soluble Calf Meal, &c.

For particulars apply to Local Agents, or to

WIREWORM

Is your land infested with wireworms? Then kill them with **VAPORITE**. It's the big harvest that means cash to you. Vaporite makes big crops possible. It acts in this way; just scatter **VAPORITE** broadcast on the ground at ploughing time. It gives forth a powerful insect-killing gas. That means money to you, because it kills your ground pests. Write for our VAPORITE booklet, Full of interesting things.

THE WEEK'S HAPPENINGS.

Cattle Show week is always replete with interest for British agriculturists, and this year has been no exception to the general rule. Societies of all grades of importance and differing aims have held meetings, and a great many of them were more than usually interesting, in consequence of the recent change of Government and the imminence of a General Election. Naturally, the agricultural programme was well to the fore, and it is to be hoped that the various means adopted to bring it before Sir H. Campbell-Bannerman's Ministry will meet with some measure of success. There is no reason why most of the items of the agricultural programme should not be placed upon the Statute Book. They are by no means of a political character, and it only wants a resolute body of men in the House of Commons to insist upon their adoption.

The Council meeting of the Royal Agricultural Society was of more than usual interest, as it was expected that details would transpire concerning the future management of the Society and its show. We must congratulate the authorities in Hanover Square upon having secured the consent of Sir Gilbert Greenall to undertake the duties of honorary director. Sir Gilbert is a man who has had a wide and varied experience, and, as a successful master of a fashionable pack of hounds, comes to take over the onerous position with exceptional qualifications. The Society have appointed as their new secretary Mr. Thomas McRow, who will be well known to most members of the Society who have been in the habit of attending the shows up to within the last two or three years. Mr. McRow was trained in the offices of the Royal Agricultural Society under the late Mr. Jenkins and Sir Ernest Clarke, and only left that body to take up the more responsible position of secretary to the Royal Agricultural Hall Company. The new secretary brings with him a rare amount of energy and ability, which will well serve him in his new and onerous position.

The Farmers' Dinner, held jointly under the auspices of the Farmers' Club and the Central Chamber of Agriculture, was rather robbed of its interest by two exceptional and uncontrollable circumstances. First of all, the transition state of the Government, and secondly, the absence of Mr. Ailwyn Fellowes, who has been for the last nine or ten months President of the Board of Agriculture. There was a general note of cheerfulness and hope about the proceedings, and under the able chairmanship of the Earl of Derby, K.G., the event passed off most successfully. At the meeting of the Central Chamber of Agriculture, steps were taken to bring agricultural requirements before the new Government, otherwise there was nothing calling particular attention.

H.R.H. the Prince of Wales has consented to be the president of the Smithfield Club for 1906, and at the annual meeting of members was accordingly unanimously elected to that position. The Smithfield Club have had a most successful year, and, under the presidency of the Heir to the Throne, 1906 bids fair to eclipse the period of prosperity which is just drawing to a close.

Seasonable Topics.

There are some events in the agricultural year which are looked for and expected much the same as we welcome the festivals of Christmas and Easter. The annual great Fat Stock Show in the Royal Agricultural Hall at Islington is perhaps the most important of these, and at a season when the sky overhanging London is invariably gloomy and forbidding, the huge building near the famous Angel is for the time being the Mecca of the leading lights of the agricultural world. Numerous changes have been made in the arragement of the Smithfield Show since its institution, and closely connected with it is the memory of many a famous agriculturist long since departed, but the show itself is a national institution, and the idea of it not being held would sound foreign in the ears of any British farmer. Indeed, like the brook immortalised by Tennyson, the Smithfield Show is a thing apparently intended to go on for ever, and though it may change with the times in its details, the interest in the great gathering never wanes, nor does it appear to lose any of its popularity. All roads lead to Islington in Cattle Show week, but how different are the roads to what they used to be, in the old days when a journey to London from the provinces was a matter of days, and something to be seriously considered before it was undertaken. Now, by means of cheap bookings, the railway companies induce the farmer to attend the Smithfield Show, fast express trains quickly convey him to town, and if, on his arrival, he uses the once-abused Underground, he finds it electrified, light, and pleasant, instead of stiflingly suffocating, as in the old days. And apart from the animals which attract attention, what a gathering of humanity is the Smithfield Show, for there the aristocracy of the agricultural world rubs shoulders with the yeoman farmer, friends meet friends, and congenial spirits discuss the rights and wrongs of the time-honoured industry. In truth, Smithfield Show is a grand old institution. May it continue for all time and prosper greatly as the years roll on.

Smithfield Show.

* * *

If we had no calendar to remind us, Smithfield Show would be sufficient to indicate that we are well into December and Christmas is in view. Throughout November things have been slack and dull, but with the advent of the festive season they naturally liven up again in various ways. In accordance with the traditions of the nation it is a season of beef, and, in addition to the great gathering at Islington, local fat stock shows now being held throughout the country are the forerunners, as it were, of the trade the farmer has been preparing for during the weeks and months that are gone. Imported beef may be all very well in the ordinary way, but it seems as if at Christmas the average Englishman likes to think that his joint comes from a beast that has been bred and fed in the old country, and there is something distasteful at Christmas time about the idea of the honoured roast beef of old England coming from a beast bred on the other side of the Atlantic. We are reminded here that everybody does not eat beef at Christmas, or what would become of the trade in turkeys, geese, game, and poultry? At the moment of writing thousands of birds are feeding cheerfully, unconscious that the end is near, and dealers and poultry farmers are preparing for the great rush of the year. Here people do not appear to be so particular as in the case of beef, and to the man in the street a turkey is a turkey, and where it has been brought up and what it has been fed upon are matters that concern him but little. The countryman, however, who is acquainted with the taste of a farmyard turkey knows better, and prepares accordingly. We hope there will be no falling off this year in the spirit of Christmas, for though there is trouble and distress in the country through lack of employment, the fund started by our noble Queen has been loyally supported, and no doubt a portion of the money will be employed in bringing a ray of Yuletide brightness to those who are now not richly blessed with the world's goods. In short, though habits and customs may change, we want the old English Christmas to remain a time of peace on earth and goodwill towards men.

The Approach of Christmas.

* * *

In the West of England the Berkeley Hunt Agricultural Society is looked upon, and rightly so, as being one of the most up-to-date and go-ahead of its kind in the country, and it lives not only for the purpose of running an agricultural show, but also to encourage and develop agricultural education on the most practical lines possible. The Society is fortunate in having such a President as Lord Fitzhardinge, who is not only a keen sportsman, but a thorough agriculturist, and takes a deep interest in the welfare of the tenants on his estate. Fences in the Berkeley Hunt, like fences in most other parts of the country, have been neglected of late years, and the Society not long ago conceived the idea of arranging for substantial prizes to be offered for the best-fenced farms. The idea caught on, and though the competition has not been inaugurated very long it is easy to observe that it has been the means of bringing about a marked improvement in the way the fences in the district are kept. The competition does good in two ways, because if a farmer enters for a prize and wins one he receives a substantial sum of money, and in addition to this he has the satisfaction of having a well-fenced farm. On the other hand, if he does not win a prize his fences are in a better state than they would have been, and consequently he is the gainer through taking part in the competition. Ploughing matches are held all over the country, and in connection with these prizes are given for fields of roots,

A Useful Competition.

long service, and so forth, and we think many societies might with advantage introduce a new feature and follow the example of Berkeley in establishing a competition for the best-fenced farm.

❦ ❦ ❦

Work for Wintry Days.

There are necessarily many days at this time of the year, and on through the winter, when outdoor work is impossible, and the farmer has to find employment for himself and his men under cover. Not that he ever has much difficulty in this, for there are generally many little jobs waiting which have been saved up in anticipation of bad weather. It is, however, when the ordinary routine work of the farm cannot be carried on that the labourer proves his ability as a handy man. Invaluable, we say, is the man to a farmer who can turn his hand to a little rough carpentry, repair a gate, make a hurdle, patch up a manger, or put a board in the bottom of a cart. Strange though it may seem, there are scores of farm labourers who seem to have no capacity for anything but sheer unskilled labour, and they are not worth so much by several shillings a week as the man who is possessed of some natural mechanical ability. As a useful branch of technical education, we think that lads should be taught the use of tools, not with the idea of making them cabinet-makers or wood-carvers, but in order that they can manipulate a saw, hammer, plane, and chisel so as to be able to do odd jobs in the way of repairs. As a matter of fact, we know several men who are able, when occasion demands it, to turn their hands to simple mechanical work, and they can command better wages than others who have no capacity in this direction, and at the same time they are worth more to their employers. A stitch in time saves nine, and in the case of harness, again, one waggoner will take no notice of a little thing giving way until at last it breaks, and the gearing has to go to the harness maker's. Another, a handy man, will provide himself with a few simple repairing materials, and by applying the stitch in time will save his master some expense in the course of a year. We need not ask which of the two is the most valuable servant, and a man can learn to piece a strap or put a buckle on without pretending to be a harness-maker.

❦ ❦ ❦

A Day's Beating.

In those parts of the country where game is largely preserved covert shooting is the order of the day just now, and beating offers welcome occupation for the rural unemployed as well as for the farm hands who can be spared for the task. Indeed, on a good many medium-sized estates it is customary for the tenant farmers to take one or two of their men, and themselves help with the beating on the occasion when the landlord has his big shoot. There is nothing menial or servile about it, for the farmer goes of his own free will, and the volunteer service on such an occasion speaks well for the spirit of good-fellowship existing between landlord and tenant. The landlord, on his part, if he is a sportsman, appreciates the help of his tenant, but he makes no attempt to patronise him, and in more cases than one the latter receives an invitation for a day's shooting when the former has had his fill. We know from experience how ready labourers, farm hands, and even farmers themselves are to help with the beating on the occasion of a big shoot, for the men with the guns do not get all the fun. Beating is not an occupation of the every-day order it offers an element of variety, and being associated with sport, that is quite sufficient. In fact, the man who starts a rabbit from a thicket of underwood, or puts up a cock pheasant and cries "mark over" very often gets as much amusement out of the act as he who kills the bird, and the beaters have the advantage over the sportsmen in the respect that they can criticise, and if many a shooter knew what the members of the beating party thought of their efforts he would not feel flattered.

New President of the Board of Agriculture.

This (Monday) morning it is officially announced that Earl Carrington has been appointed President of the Board of Agriculture and Fisheries with a seat in the Cabinet.

The annual meeting of the Northallerton Shire Horse Society was held on Tuesday. The balance-sheet, which was adopted, showed the receipts to have been £350, and the expenditure £334, leaving a balance of £16. The Chairman moved a resolution, which was adopted, stating that the society would not be justified in securing the services of another entire horse, unless they have previously received a guarantee of not less than £60.

Agricultural Politics.

BY A LOBBYIST.

Who will be the Minister for Agriculture in the new Cabinet? This is the one political question of moment to the agrarian interests. I find that in Liberal circles the most favoured nomination is that of Lord Carrington. At the National Liberal Club, on Friday, I heard the definite declaration made that his lordship had been assured by Sir Henry Campbell-Bannerman that this is the one office beyond all others which he would prefer he should occupy. Sir Henry is aware, of course, that the farmers, as a class, are not exuberantly Radical or profoundly sympathetic towards himself. The appointment, therefore, of a man of the calibre of Lord Carrington—a politician who has made the rural problem the subject of wide experiment and sagacious thought—would be, it is assumed, accepted as in the nature of an act of conciliation. It would be, so runs the anticipation, interpreted as an assurance that at least the rural policy of the Government will not proceed upon transigeant lines, and will at least be characterised by knowledge and personal sympathy. Well, such an assurance as this would inevitably be welcomed, after the wild turgidities turgidities which have assumed the character of phophecies as to the Liberal policy—which have appeared in certain prints friendly to the new Premier, and claiming to have his confidence.

• • •

And what of Mr. George Lambert? Well, I cannot pretend to be aware of what is upon the knees of the gods. One fact is, however, certain. Mr. Lambert does not now loom large in the anticipation of the quidnuncs. Why he should have receded in political esteem, I cannot say; but there has been something in the nature of a recession. Of corrse, it may be that Sir Henry Campbell-Bannerman will in the end be glad to take advantage of his undeniable talents and capacity. If many Liberal Leaguers follow the reported example of certain of their chieftains and refuse to take office, the political position of Mr. Lambert would inevitably have recognition. What, however, may make for his appointment to the Ministry for Agriculture—despite the fact that the prophet-mongers do not favour him—is the growing feeling against the head of a great administrative department being in the House of Lords. This feeling had a vivacious expression when the Earl of Onslow renounced the portfolio of agriculture. Even Conservatives echoed it; and among the farmers themselves—and, after all, the farmers have some claim for consultation—the undesirability of giving the position to another peer had almost a vehement expression. That Radicalism, with its antipathies to the Upper House, and to what I may describe as peer-dom, should prefer to see the position given to a commoner is natural. It is, I repeat, this which makes for the benefit of Mr. George Lambert. Perhaps when you read these lines the formal authoritative announcement will have been made. Notwithstanding my own argument, however, I reassert that the portents are against the appointment of Mr. Lambert.

• • •

What position will Sir Walter Foster have in the new Ministry? Of course, Sir Walter has been a fighting asset of the Liberal organisation in the last ten years. As one of the most important forces of the Land Law Reform Association, he has been an active propagandist on land-reform lines. His former experience at the Local Government Board means an equipment for administration which only a few other men in the party possess, whilst his personal qualities have greatly commended him to his fellow-legislators. For my part I should like to see Sir Walter made President of the Local Government Board. This would mean that he would not have to secure a prefatory knowledge ere he ventured on the work of administration. I fear, however, that Cabinet-rank is not intended for him. The pyrotechnists of the party have first to be provided for—the Liberal authors of oratorical fireworks. These men are not only pyrotechnists; they are pushful. And pushfulness is, in modern politics, an infinitely greater commendation than mere work-a-day spade-work. Sir Walter is also not of the temperament that cares for the employment of trumpeters; he is not of the nature to organise an eternity of pæans to his own honour; he is too sensitive, too, to eternally hymn his own glories. Hence, I fear, that the position which he really deserves may go to another, and he a pyrotechnist. Well, 'twill be a thousand pities. Sir Walter Foster has those qualities which are most in harmony with the necessities of the Local-Government Board.

• • •

Is this Ministry calculated to be of advantage to agriculture? Will it embody in legislation those proposals we associate with the names of Mr. George Lambert and Mr. Channing? The pre-occupations and pre-engagements of the new Government simply render this impossible. Ministers may, of course, seek to give a more important character to the Board of Agriculture. They may give it a wider administrative authority, and seek to make the Board a real, rather than a lay, influence. This, of course, would be simply a matter for the estimates, and would mean nothing more serious than a couple of hours' discussion. I do not believe, however, that the Government will attempt to do more, or, at least, not more than to pass Mr. Ailwyn Fellowes' Butter Bill, and his Dogs Bill. First of all, the passive resisters and the tee-totallers have to be conciliated. This alone will provide more than enough work for a couple of sessions. Then the Irish will demand recognition and concessions. The man would be a bold prophet who asserted that Home Rule will be conceded by this Government; but, at least, unless Ministers make some progress along the road of devolution they will have the Nationalist fangs in their throat. It is certain that meanwhile the clamorous economy-men and efficiency-men will be raising their cries. They will be insistent that the Army shall be placed in a satisfactory condition; they will demand that at the War Office we shall have every time twenty-shillings' value for each sovereign of the nation's money. The Anti-Randites, too, will then begin to assert themselves. You may be certain, for instance, that they will seek to make the South African millionaires pay that promised thirty millions. What chance thus can there be for the farmers? They will never shout like the other interests. True, they are boasting of their intention to pursue an independent political course, but their song has really a very dulcet note.

• • •

The New Forest election has a considerable significance. It reveals that in the rural constituencies the tide of anti-Toryism has been somehow arrested. It means that, after all, the bogeys which have been so assiduously utilised during the last two or three years have lost something of their repellent guise. The phosphorus does not appal in the old fashion; the scooped-out turnip and candle is not so often mistaken for the countenance of a ghostly resident of the spheres. As a fact, the Liberals have rather over-done their own game. Their prophecies as to the inevitable result of Protection have been couched in too lurid a phraseology. They have painted their picture in too fierce pigments. It was really inevitable that after a time the business would pall. I doubt that the agricultural labourer really believes that if Protection be adopted as the economy of this Empire, he will at once be reduced to an unvarying fare of horse-flesh and black bread. He has been so often hysterically assured that Protection would mean the reinvocation of the miseries of the hungry forties that the hysteria has at last failed to quicken the pulse to a fearsome gallop. The New Forest election may be a moral Liberal victory in that the Conservative majority has been seriously reduced, but it has put something like a new heart into the Tory organisers. Their foreboding

CHANGE OF ADDRESS.

Will readers kindly note that we have removed to larger and more convenient Offices, and that in future our address will be—

3, WELLINGTON STREET,

STRAND, LONDON, W.C.

Telephone—3665 Gerrard. Telegrams—"Certitude, London."

is less acute as they regard their prospects in the counties.

• • •

Procrastination is an excellent synonym for the words "Warwickshire farmers." The Warwickshire Chamber of Commerce met on Saturday for the purpose of resolving upon independent political action. It was, of course, apparent on Saturday that we were on the very shadow of a General Election. No man with a gift of observation could then have assumed that it would be postponed for more than a few weeks. This fact should have lent immediacy to their purpose. Did it? Well, when one practical speaker, Mr. O. Bowen, proceeded to outline the objects which should animate such independent action, he was called to order, and, in effect, had his mouth closed. Then by way of apology to him, and with the object of solacing its own conviction that there was no effective sincerity behind the advertised anxiety, the Chamber asked Mr. Bowen to read a paper outlining his proposals at the next meeting of the Chamber, which will take place towards the end of January. If the matter can be postponed until the end of January, it can just as well be postponed to the Kalends. It is this, nevertheless —this indisposition to forceful action— which, I fear me, will render the whole business innocuous and futile. If we do have resolutions, let us see to it that they are really resolute. "If you do have beliefs, don't believe them too hard," says the Yankee cynic. In British politics, if you don't believe your faiths hard, you shouldn't entertain beliefs at all.

Agriculturalist in the Political Honours List.

Following the usual custom, the retiring Government has obtained his Majesty's approval of a list of honours for gentlemen who have rendered signal service to the cause with which the Government is associated. Nine new peerages have been conferred, including two viscounties. Five gentlemen are appointed Privy Councillors, eleven are raised to the rank of baronet, and fourteen are given knighthoods, whilst there is a new K.C.M.G. (Mr. Henniker Heaton), two C.B.s, and four additions are made to the Irish Privy Council.

We are glad to see that one or two agriculturists figure in the list. The most notable is perhaps that distinguished veteran of the Crimean war, Lord Tredegar, who, as our readers know, takes the keenest interest in agricultural affairs, proof, if such were needed, being found in the great annual show promoted by him. His Majesty has made him a viscount, and it will be the wish of all agriculturists that he live for many years to enjoy his well-deserved honour.

Sir Michael Hicks-Beach, who has also been made a viscount, will be remembered as the Chancellor of the Exchequer who put a small duty on corn.

Among the new baronets figure the well-known sheep-breeder, Mr. R. P. Cooper, who as a member of the Council of the Royal Agricultural Society has figured prominently during the Society's crisis, and it is stated that he is the gentleman who has guaranteed to make good any loss on next year's Derby show. Mr. Lindsay Hogg, who is another recipient of baronetcy, is M.P. for the Eastbourne Division of Sussex, and is well known in the South for the interest he takes in agricultural affairs.

The last issue of the Journal of the Welsh National Agricultural Society is chiefly taken up with an account of the society's second show, this occupying about thirty of the sixty-four pages. The other contents, all of which are interesting, include. "The Origin of the Welsh Cob," by C. C. Rogers; "Rations for Farm Stock," and two articles in Welsh. There are also some full page illustrations of prize winners at the show.

FARM.

Direct Supply of Farm Produce.

With the object of forming an association to supply farm and dairy produce of essentially Essex origin direct from the producer to the London consumer, a meeting of gentlemen living in the county was convened for Monday afternoon at the Great Eastern Hotel., Liverpool Street. Lord Deerhurst, who is taking considerable interest in the movement, and a number of other gentlemen attended at the appointed time, but in view of the numerous letters expressing sympathy with the objects of the gathering, but intimating that the writers wished to be present at the Agricultural Hall during the King's visit there, it was deemed advisable to postpone the meeting to an early but more convenient date.

Under the scheme which will be laid before the meeting, purchasing and collecting depots would be established at Ongar, Dunmow, Braintree, and Chelmsford, to begin with, where all the sorting, grading, and slaughtering could be done in a much better, cleaner, and cheaper manner than is possible in London. The county "base," owing to its greater proximity to London, would be Ongar, whence a motorwagon would start every morning to collect from the depots at other places mentioned, returning thither every afternoon, when another and larger motor vehicle would proceed to the London depot at Westminster. Each of the depots would be furnished with cold storage and chilling rooms, the motor-waggons being also insulated.

In lieu of the shops it is proposed to employ ingeniously devised and attractive stalls. Three of these (one with butcher's meat, another with fruit and vegetables, and the third with butter, honey, cheese, eggs, etc.), would be placed in six of the eight "market" streets of Westminster. It is considered that £15,000 would be required for the erection of buildings, etc., and about £5,000 for working capital.

Higher Agricultural Education.

Deputation to the Board of Agriculture.

A deputation waited upon the Board of Agriculture in London on Tuesday afternoon, to urge the importance of maintaining by all legitimate means the agricultural industries of England and Wales. The deputation consisted of representatives of the Universities of Cambridge and Leeds, the Armstrong College (Newcastle-upon-Tyne), the University of Wales (Aberstwyth), the University of North Wales, the University College of Reading, the Midland Agricultural and Dairy Institute (Derby), Harpers-Adams Agricultural College (Newport, Salop), the Agricultural College (Wye), the Carnarvonshire County Council, Derbyshire County Council, and other local authorities.

The deputation urged the necessity of proper provision being made throughout the country for research and higher education in agricultural science, in order that, if English agriculture is to hold its own in face of increasing foreign competition, English agriculturists should be enabled to bring to their work a scientific knowledge and training in scientific method such as are placed at the disposal of foreign rivals and their own countrymen north of the Tweed. The speakers were Professor Middleton (Cambridge University), Professor Blackwell (University College, South Wales), Lord Barnard, Mr. Morris (Yorkshire), and Alderman Tinniswood (Cumberland).

Sir Thomas Elliott, Permanent Secretary of the Board of Agriculture, who received the deputation in the place of Mr. Ailwyn Fellowes, President of the Board, said his first duty was to say that he was sorry it had fallen to his colleagues and himself to receive the deputation in the absence of Mr. Ailwyn Fellowes. Mr. Fellowes, however, thought, until such time as his successor was appointed, that the permanent staff, as the link between the old and the new regime, should receive the deputation. They had arranged for a verbatim report to be made of the weighty and practical speeches which had been delivered, so that it might be submitted in extenso to their next chief. If Mr. Fellowes had been able to he would have expressed his full concurrence as to the great value of the work being done by the colleges in the interests of agriculture. If a man was to be a successful agriculturist to-day in the face of foreign competition, it was necessary that he should have a thorough scientific knowledge of the industry. It was often said that agriculturists were slow to adapt themselves to different circumstances and new discoveries. However true that might be in certain directions, it could not be alleged in regard to agricultural education. As regarded finance, he was quite certain that the Treasury, in any application the deputation made to them, would require to be informed in very great detail as to whether there was any chance of some increase in the constitutions of local authorities or in the amount of private benefactions. If such increases had been given, the position of the Board of Agriculture in the matter would be much easier. He should like to associate himself with the gentleman who said there was great room for those who advocated scientific research in agriculture. Personally, he thought the time had come when they should take some steps for the co-ordination of the various agencies for such research. He should like to see some better equipment for agricultural research, and the provision of financial assistance for that purpose, and he could assure them that, so far as the Department were concerned, they would not hesitate to impress that view upon the Treasury. The Department had the fullest sympathy with the work which the colleges had done, and it would be his duty to bring what they had said under the notice of the incoming President. He believed, with the strong case the deputation had put before them, the Board might before long be able to meet their aspirations. (Cheers.)

The deputation then withdrew.

National Agricultural Examination Board.

The National Agricultural Examination Board held its annual meeting yesterday (December 7), at 13, Hanover-square, under the presidency of the Very Rev. Dr. Gillespie, LL.D., chairman of the Board. There were present:—Lord Moreton, Mr. J. Bowen-Jones, Mr. Martin J. Sutton, and Sir Ernest Clarke (representing the Royal Agricultural Society of England); Dr. Gillespie, Dr. David Wilson, Mr. Alexander Cross, Mr. John Speir, and Mr. James Macdonald (representing the Highland and Agricultural Society of Scotland); Dr. William Somerville (Board of Agriculture), Mr. John Struthers, C.B. (Scotch Education Department), and Mr. Ernest H. Godfrey, Secretary of the Board.

The reports on the various examinations held under the auspices of the Board during the year 1905, were considered, and the regulations for the similar examinations to be held during 1906 were discussed, and, after revision, ordered to be issued.

Agricultural Imports.

The following is an account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week inded Dec. 2, 1905, together with the quantities, emported in the corresponding week of the previous year:—

The Royal Agricultural Society of England.

Monthly Council Meeting—Sir Gilbert Greenall, the Honorary Director—The New Secretary—Prize Sheet for Derby —No Government Grant for the Society.

A monthly Council meeting was held on Wednesday, Mr. F. S. W. Cornwallis (President) in the chair.

Trustees.

The Earl of Coventry, Earl Egerton of Tatton, Sir Walter Gilbey, Bart., Colonel Sir Nigel Kingscote, G.C.V.O., K.C.B., Lord Middleton, Lord Moreton, Sir John H. Thorold, Bart.

Vice-Presidents.

H.R.H. Prince Christian, K.G., Mr. J. Bowen-Jones, Mr. J. M. Dugdale, the Right Hon. A. E. Fellowes, M.P., the Earl of Northbrook, the Hon. Cecil T. Parker.

Other Members of the Council.

Mr. George Adams, Mr. Charles R. W. Adeane, Mr. T. L. Aveling, Mr. S. N. Bankart, Mr. Richardson Carr, Mr. R. P. Cooper, Mr. J. P. Cross, Lieut.-Col. Curtis-Hayward, Mr. John T. C. Eadie, Sir John Gilmour, Bart., Mr. R. M. Greaves, Sir Gilbert Greenall, Bart., Mr. Joseph Harris, Mr. W. Harrison, Mr. J. H. Hine, Mr. R. W. Hobbs, Mr. J. Howard Howard, Mr. Walter F. Ingram, Mr. Ernest Mathews, Mr. W. A. May, Mr. C. Middleton, Mr. T. H. Miller, Mr. T. S. Minton, Mr. Ralph C. Palmer, Mr. Claude M. S. Pilkington, Mr. F. Reynard, Mr. John Rowell, Mr. W. Scoby, Mr. E. W. Shackle, Mr. A. J. Smith, Mr. R. Stratton, Mr. Herbert Tallent, Mr. George Taylor, Mr. John Thornton, Mr. A. P. Turner, and Mr. C. W. Wilson.

Election of New Members.

The minutes of the last meeting of the Council, held on November 1, 1905, having been taken as read and approved, the election of the following twenty-two new members was proceeded with:—

Attenborough, George, 10, Pembridge Place, W.
Beck, Septimus F., Great Missenden.
Bevan, Edmund H., Whilton Lodge, near Rugby.
Biddulph, the Hon. John M. G., 6, Eaton Place, W.
Browne, Arthur S., Buckland Filleigh, Highampton, Devon.
Craig, Charles, Fllore House, Weedon, Northants.
Goodchild, C. S., The Hermitage Farm, Clare, Suffolk.
Hallett, John S., Sherford, Brixton, Plymouth.
Hitch, W. H., Cowley Manor Estate Office, near Cheltenham.
Horne, Lieut.-Col. H. S., R.F.A., East Haddon, Northampton
Keene, H. F., Clerk of the Asylums Committee, London County Council, 6, Waterloo Place, S.W.
Manfield Harry, Moulton Grange, near Northampton.

Woolcombe, G. A. L., Hemerdon House, Plympton.
Young, H. A. L., St Helens, Weymouth

Finance: Park Royal.

The final balance-sheet of the Society's Show at Park Royal, held last June, had been submitted to and examined by the Society's accountants and by the auditors appointed by the members. The balance to the debit of the show was £7,279 17s. 11d., of which £7,038 12s. would be defrayed by the contributions received to the Show Fund of 1905, and the balance (£241 5s. 11d.) from the Society's ordinary funds.

A letter had been received from the Society's solicitors, stating that the original vendors had declined to exercise their right of pre-emption in regard to the Park Royal Estate. Under these circumstances the Committee proposed that the Estate should be put up for sale in the course of next summer. Any suitable offer made meanwhile would be considered.

The Committee further reported that Sir Nigel Kingscote had intimated his desire to be relieved of the duties of Chairman at the end of the present year. They had received this intimation with extreme regret, and they felt it incumbent upon them to place on record their high sense of the ability, courtesy, and impartiality with which Sir Nigel had fulfilled the responsible and laborious duties of Chairman of the Committee during the long period of thirty years.

Mr. C. R. W. Adeane had been elected Chairman of the Committee for the year 1906.

Election of New Secretary.

Sir NIGEL KINGSCOTE presented a report from the Finance Committee upon the applications received for the office of Secretary to the Society. The Committee submitted the names of three candidates for the consideration of the Council, and recommended the appointment of Mr. Thomas McRow. He, therefore, formally moved Mr. McRow's appointment.

Mr. W. HARRISON seconded the motion, and it was unanimously adopted.

Journal.

Sir JOHN THOROLD (Chairman) reported the arrangements made with the printers for the production of the next volume of the Society's "Journal," and for the collection of advertisements. The Committee recommended that the price to non-members of the forthcoming volume be fixed at 10s. The contents of the volume had been discussed, and it had been arranged to include a biography of the late Sir Jacob Wilson, accompanied by a portrait, which would form the frontispiece to the volume.

Mr. T. McRow.
THE NEW SECRETARY OF THE ROYAL AGRICULTURAL SOCIETY.

Mr. McRow has been the secretary of the Agricultural Hall Company for the past two years. In that position he succeeded the late Mr. Venner, and for many years before he assumed the control of the flourishing North London Establishment he was under the late Mr. Jenkins and Sir Ernest Clarke at Hanover Square.

Stock Prizes.

Mr. GREAVES (Chairman) reported that offers of the following prizes had been received from various Breed Societies for the show of 1906, and the Committee recommended their acceptance with the cordial thanks of the Society:—

Hunters' Improvement Society.—Two Gold Medals, of the value of £10 10s. each, for the best hunter mare four years old and upwards, and for the best hunter filly not exceeding three years old, which are registered or entered in the Hunter Stud Book.

Hackney Horse Society.—Two Champion Gold Medals, of the value of £10 each, for the best hackney stallion and the best hackney mare or filly; and a Champion Gold Medal, of the value of £5, for the best mare or gelding exhibited in the single harness horse classes, the produce of a registered hackney stallion.

Shetland Pony Stud Book Society.—A Silver Medal for the best Shetland pony.

Polo and Riding Pony Society.—Two Gold Medals, of the value of £10 each, for the best polo and riding pony stallion and for the best polo and riding pony mare.

Shire Horse Society.—Two Champion Gold Medals, of the value of £10 each, for the best Shire stallion, and the best Shire mare or filly; and two prizes of £5 to the breeder of the champion stallion, and to the breeder of the champion mare or filly, provided the breeder is a member of the Shire Horse Society, and the dam is a mare registered in the Shire Horse Stud Book.

Clydesdale Horse Society.—Two Champion Prizes of £10 each, for the best Clydesdale stallion, and for the best Clydesdale mare or filly.

Suffolk Horse Society.—A Challenge Cup, value 50 gs., for the best Suffolk stallion, the cup to become the absolute property of an exhibitor winning it three times.

Shorthorn Society.—Class for heifer in milk, calved in 1905: 1st, £10; 2nd, £6; 3rd, £4. Class for Shorthorn dairy cow, in milk, under four years old, on the first day of the show, entered or eligible for entry in Coates's Herd Book: 1st, £10; 2nd, £6; 3rd, £4. Class for Shorthorn dairy cow, in-milk, four years old and upwards, on the first day of the show, entered or eligible for entry in Coates's Herd Book: 1st, £10; 2nd, £6; 3rd, £4. Cows entered in these Shorthorn dairy classes to be clean milked at six o'clock in the evening previous to the opening of the show. That on the first morning of the show all cows shall be milked in the ring in the presence of the judge, who shall see the milk weighed, and any cow that does not yield up to the following standard shall be disqualified:—Cows having calved within three calendar months of the show, 25lb. of milk. If calved more than three calendar months from the first day of the show, 20lb. of milk. Two Champion Prizes of £50 each for the best male and best female Shorthorn, and special prizes of £5 each to the breeders of the first-prize animals in each of the nine Shorthorn classes.

Lincolnshire Red Shorthorn Association.—Bull, calved in 1904: 1st, £10: 2nd, £6; 3rd, £4. Bull, calved in 1905: 1st, £10; 2nd, £6; 3rd, £4. Heifer, calved in 1904: 1st, £10; 2nd, £6; 3rd, £4. Heifer calved in 1905: 1st, £10; 2nd, £6; 3rd, £4.

Hereford Herd Book Society.—A first prize of £15 for bull calved in 1905; two Champion Prizes of £10 10s. each for the best Hereford bull or the best Hereford cow or heifer.

Sussex Herd Book Society.—£54 towards the Prize for Sussex cattle, and two Silver Medals for the best male and best female Sussex.

Welsh Black Cattle Society.—A Champion Prize of £5 5s. for the best Welsh bull.

The Red Polled Society.—£20 towards the Prizes for Red Polled cattle.

Polled Cattle Society.—Gold medal for the best breeding animal in the Aberdeen-Angus classes.

English Aberdeen-Angus Cattle Association.—Gold Medal for the best Aberdeen-Angus animal of the opposite sex to that of the animal awarded the Gold Medal of the Polled Cattle Society.

English Guernsey Cattle Society.—A Champion Cup, of the value of £5 for the best Guernsey cow or heifer.

English Kerry and Dexter Cattle Society.—Prizes of £5, £3, and £2, in two classes, for Kerry heifers and for Dexter heifers, calved in 1904 or 1905. Two Challenge Cups, value 25 gs. each, for the best Kerry animal and for the best Dexter animal, the cups to become the property of an exhibitor winning them three years in succession.

English Jersey Cattle Society—Butter Tests.—A. Cow of any age, breed, or cross, exceeding 900lb. live weight: 1st, £15; 2nd, £10; 3rd, £5. B. Cow of any age, breed, or cross, not exceeding 900lb. live weight: 1st, £15; 2nd, £10; 3rd, £5. Special prizes for the three cows in Classes A and B obtaining the greatest number of points in the Butter Test Competition: 1st, £20; 2nd, £10; 3rd, £5. A Gold Medal (or £10 in money), Silver and Bronze Medals for the three Jersey cows entered in or eligible for entry in the English Jersey Herd Book, obtaining the greatest number of points in the Butter Tests, Classes A and B. Special Milk Yield Prizes of £20, £10, and £5 for cows in milk of any age, breed, or cross.

Oxford Down Sheep Breeders' Association.—£8 for four fourth prizes of £2 each in each of the four classes for Shearling rams, three ram lambs dropped in 1906, three Shearling ewes of the same flock, and three ewe lambs dropped in 1906 respectively.

Shropshire Sheep Breeders' Association.—Two-shear ram: 1st, £8; 2nd, £4. Five Shearling rams of same flock: 1st, £15; 2nd, £10; 3rd, £5. Special selling (auction) Shearling ram: 1st, £20; 2nd, £15; 3rd, £10; 4th, £5.

Southdown Sheep Society.—Prizes of £10, £5, and £3 in two classes for two-shear rams and three Shearling rams of same flock. A Champion Gold Medal (or £10 10s. in money) for the best two-shear or Shearling ram. A Silver Medal for the best pen of ewe or ewe lambs.

Hampshire Down Sheep Breeders' Association.—Prizes of £10 and £5 for two-shear rams, and a Champion Prize of £10 for the best pen of ram lambs or ewe lambs.

Lincoln Longwool Sheep Breeders' Association.—Prizes of £7 and £3 for two-shear rams; £15, £10, and £5 for pens of five Shearling rams of same flock; and a Champion Medal (or 5 gs. in money) for the best Lincoln ram exhibited.

Lonk Sheep Breeders' Association.—£10, for two Second Prizes of £5 each, in each of the two classes for ram, Shearling, and upwards, and three Shearling ewes of same flock respectively.

National Pig breeders' Association.—Three Champion Gold Medals (or three special prizes of 5 gs. each) for the best boar or sow exhibited in the Large White, Middle White, and Tamworth classes. Also prizes of £7, £3, £2, in three classes for Large White, Middle White, and Tamworth sows farrowed in 1905.

The Committee recommended that prizes for Milk-yield Classes be offered as last year. The question of the date from which the ages of Aberdeen-Angus cattle should be calculated had again been considered by the Committee, who adhered to their previous recommendation on the subject. They also recommended that the request of the Galloway Cattle Society, for the calculation of the ages of Galloway cattle from December 1, be complied with.

The Committee had considered the draft prize-sheet for the show of 1906, and now recommended it for acceptance and circulation in the ordinary course.

They also made the following recommendations:—The insertion of a condition that breeding sows competing for prizes in the Society's showyard must either be exhibited with a litter of live pigs, or must have produced a litter in 1906 previous to the show. That in the Sheep Classes for which they had suggested at the previous meeting a single prize of £10, two prizes, a first of £7 and a second of £3, be offered instead. That the Judges Selection Committee have power to appoint two judges where a decision from two judges was, in their opinion, necessary. That instructions be given for letters to be sent to the various Breed Societies asking them to be good enough to send in a list to the Society of not more than six judges recommended by them. That auctioneers at the sales to be held in the Derby Show-

yard be appointed as follows:—Mr. Arthur C. Beck for horses, Mr. John Thornton for cattle, and Mr. Alfred Mansell for sheep and pigs.

Age of A.-A. Cattle.

Mr. RALPH PALMER said that, with reference to the question as to the date from which the ages of Aberdeen-Angus cattle should be calculated, he did not think the Council had had the fact as to the matter before them. If the recommendation of the Stock Prizes Committee were adopted, he thought it would entail a very great hardship, and he therefore begged to oppose the Committee's recommendation that the ages of Aberdeen-Angus cattle be calculated from December 1 instead of January 1, as at present.

Mr. THORNTON seconded, and said that as the matter now stood the year is stated to be 1902, 1903, or 1904, and the Aberdeen-Angus Society desired, under the new order of things, that the ages should be reckoned from December 1.

Mr. GREAVES thought the Society must go even further. If they allowed any of the breeds to choose their own dates, they must allow all the breeds to do likewise. It would not be fair on the application of one breed to fix a certain date without consulting the other breeds.

Mr. MIDDLETON said that all animals had to be eligible for entry in their respective Herd Books. If so, they ought to take the dates from those books.

The PRESIDENT having formally put Mr. Palmer's amendment to the meeting, it was declared lost, and the recommendation of the Stock Prizes Committee was adopted.

Implement.

Mr. GREAVES reported that, in the absence of Mr. Frankish through illness, he had been called to the chair.

Mr. Neville Grenville had forwarded a report as to the trials which took place after the last show at Park Royal of a milking machine entered as a "new implement," together with a letter from the judges recommending that a silver medal be given to Messrs. J. and R. Wallace for their milking machine No. 2,558 in the catalogue for 1905. The Committee recommended that the suggestion of the judges, in which the Stewards of Implements concurred, should be adopted.

The Committee recommended for adoption regulations for trials of suction gas engines to take place in connection with the Derby Show of 1906, with prizes of a gold and silver medal.

The Implement Regulations for the Derby Show had been finally amended and approved by the Committee, and instructions had been given for their circulation.

General: Derby.

Sir GILBERT GREENALL reported that the following representatives of the Derby Local Committee, nominated by the Mayor of Derby, had been elected members of the General Derby Committee:—Mr. E. T. Ann (Mayor), Mr. Alderman Souter, Mr. Councillor Hart, Mr. Richard Finney, Mr. James Oakes, Mr. J. Pakeman, Mr. W. Cecil Salt, Mr. Jacob B. Smith, Mr. G. H. Strutt, with the Local Secretaries, Mr. G. Trevelyan Lee and Mr. Sidney Burton, Secretary of the Derbyshire Agricultural Society.

The proposals of the Local Committee with regard to the offer of prizes had been discussed, and various questions arising out of them had been settled. The Committee recommended that a horse-shoeing competition be held in connection with the Derby Show, in two classes, for agricultural horses and for hunters; that the competition be open to the United Kingdom; and that the following prizes be offered in each class:—First prize, £3 10s.; second prize, £2; third prize, £1 10s.; fourth prize, £1.

Showyard Works.

Mr. HARRISON reported the Committee's recommendation that Sir Gilbert Greenall be added to the Committee. The Committee had considered tenders for the construction of the showyard which had been laid before them. As the matter required further consideration, they asked for authority to deal with it before the next meeting of the Council.

New Members of Council

Sir JOHN THOROLD (Chairman) reported that Mr. James Falconer, of Northbrook Farm, Micheldever Station, Hants, had been duly elected under Bye-laws 84 and 88 as an Ordinary Member of the Council for the Division of Hampshire, to fill the vacancy caused by the election of the Earl of Northbrook as a Vice-President. He also reported that for the four divisions—Cornwall, Dorset, Essex, and South Wales—in which there were vacancies on the Council to be filled up, the following members had received the largest number of votes:—Cornwall: Mr. George Lobb, of Lawhitton, Launceston. Dorset: Mr. Arthur Hiscock, jun., of Manor Farm, Motcombe. Essex: Mr. John Barker, of The Grange, Bishop Stortford. South Wales: Mr. C. Coltman Rogers, of Stanage Park, Brampton Bryan. The Committee had the pleasure to announce that Sir Gilbert Greenall had consented to undertake the duties of Honorary Director of the Derby Show, and the Committee formally recommended his appointment. They recommended also the appointment of Mr. Ernest Mathews as Steward of Dairying and Mr. J. T. C. Eadie as Steward of Forage. The Committee recommended the election of Sir Ernest Clarke as an Honorary Member of the Society on his retirement from the office of Secretary.

On the motion of Sir John Thorold, Mr. George Lobb, Mr. A. Hiscock, jun., Mr. John Barker, and Mr. C. Coltman Rogers were formally elected Members of the Council under Bye-law 90.

Sir Ernest Clarke.

Sir JOHN THOROLD, in moving that Sir Ernest Clarke be elected an Honorary Member of the Society on his retirement from the office of Secretary, in recognition of his services to the Society during the eighteen and a half years that he had held that office, said that he did not think words of his were necessary to recommend this motion to the Council. Having been on the Special Committee which elected Sir Ernest Clarke in 1887, and having worked with him up to the present time, he wished to testify to the very great obligation of himself and every member of that Council to Sir Ernest for the great services he had rendered to the Council, and for the valuable assistance he had rendered to them all as individuals, never sparing himself in time or out of time, and always having the interests of the Society as his one and only object. In conferring the Society's Honorary Membership upon Sir Ernest, they would permanently attach him to the Society in whose interests he had spent the best years of his life. (Hear, hear.)

Sir Gilbert Greenall.

The Honorary Director of the Royal Agricultural Society.

Sir NIGEL KINGSCOTE said he had the greatest pleasure in seconding this proposal. Having been on the Council during the whole of Sir Ernest's period of office, he wished to express his high sense of obligation to him for all that he had done for the Society.

The PRESIDENT said that he felt he could add nothing to what had been said so ably by Sir John Thorold and Sir Nigel Kingscote, except to say that during the short time that he had filled the chair he recognised to the full the ready assistance which Sir Ernest Clarke had given him on all occasions.

The motion having been carried unanimously, Sir ERNEST CLARKE, whose rising was greeted with applause, said that he was deeply touched at the generous words with regard to himself and his services to the Society which had been spoken by the two distinguished Members of the Council who had moved and seconded the resolution, and who had been such kind friends to himself during his long association with the Society. His philosophy failed him at the crucial moment when he reflected that he was now standing for the last time in the familiar place that by the favour of the old Council had been his for the last eighteen and a half years. Very many changes had taken place in the interval, and of the Members of the Council whom he had first met as a complete stranger to them all in June, 1887, only eight were still members of the governing body. Time had passed so quickly by that it was difficult to realise that he had served the Society longer than his predecessor as Secretary, and had been officially associated with more Royal Shows than ever their late friend Sir Jacob Wilson had been as Honorary Director. He desired to thank the Council from the bottom of his heart for their constant kindness and consideration to him in the carrying out of the heavy and responsible work which had to be fulfilled by the occupant of the honourable office which he now relinquished. He also wished to express his cordial thanks to the colleagues who had worked with him and under him for the loyal assistance they had always given to him and to the Society. The Council had been good enough to pay him a rare compliment, and one which he highly appreciated, by electing him an Honorary Member, and thus, as Sir John Thorold had well said, attaching him to the Society for the rest of his life. He thanked the Council for this mark of their goodwill towards him, and he hoped that the many private friendships with which he had been honoured during the time that he had been privileged to be in official relations with members of the Council would be continued in his retirement. The Council had honoured him with their confidence and support during the long years of strenuous work which lay behind him, and he had endeavoured to the utmost of his abilities to justify that confidence by devoting the best of his powers to the service of the Society, which he sincerely hoped might have before it a prosperous future worthy of its splendid traditions.

Royal Commission on Horse Breeding.

A letter dated November 18, 1905, was received from the Royal Commission on Horse Breeding, asking the Council, in view of the decease of Sir Jacob Wilson, who represented the Royal Agricultural Society upon the Commission, to nominate one of their number to represent the Society, in accordance with the terms of the Royal Warrant dated December 3, 1887, in order that such nomination might be brough before the First Lord of the Treasury for submission to His Majesty the King.

On the motion of the Earl of COVENTRY, seconded by Lord MIDDLETON, it was resolved unanimously that Sir Walter Gilbey be nominated as the Society's representative upon the Commission.

Date of Next Meeting.

After some discussion, the Council fixed the date of the next meeting for Wednesday, January 10, 1906, and then adjourned until that date.

The Government Grant. Deputation to the Board of Agriculture.

A deputation from the Royal Agricultural Society of England waited upon Sir Thomas Elliott, K.C.B., Secretary of the Board of Agriculture, on Wednesday.

The deputation consisted of Mr. F. S. W. Cornwallis (President), the Earl of Northbrook (Chairman of the Veterinary Committeee), Lord Moreton (Chanrman of the Education Committee), Mr. J. Bowen-Jones (Chairman of the Chemical and Woburn Committee), Sir John Gilmour, Bart., Sir Ernest Clarke (Secretary), and the Very Rev. Dr. John Gillespie, LL.D., and Mr. Ernest H. Godfrey (Secretary of the National Agricultural Examination Board).

Mr. CORNWALLIS having introduced the deputation, and apologised for the absence, through illness, of Mr. E. V. V. Wheeler (Chairman of the Botanical and Zoological Committee), made a statement as to the objects of the deputation.

The Royal Agricultural Society base their appeal upon the fact that these branches are conducted as much in the interests of the general agricultural public as in the interests of the governors and members who subscribe to the Society. They also point out that whilst the Board of Agriculture and Fisheries administers annually considerable grants in air of local teaching institutions, and of local agricultural experiments and research, the Royal Agricultural Society of England, whose educational and scientific research work is national in character, receives at present no grant of the kind. It is

considered that the Society may fairly claim to be placed in this respect upon an equal footing with other Agricultural Societies, and with the local university and agricultural colleges in the various districts of Great Britain.

Lord MORETON, Dr. GILLESPIE, Lord NORTHBROOK, Mr. BOWEN-JONES, and Sir JOHN GILMOUR having spoken in support of the appeal,

Sir THOMAS ELLIOTT, in reply to the representations of the deputation, said that Mr. Fellowes and the officers of the Board had been in consultation for some time past as to the position of the Royal Agricultural Society and its desire for a grant from the Government. As a result of the inquiries made, he had come to the conclusion that there was no prospect of the Treasury making any direct grant to the Society. There was, in fact, a disinclination to recognise the justice of a claim for a subvention from the Imperial Exchequer towards defraying the cost of privileges which were more or less confined to a limited class.

That being so, the Board had considered whether there was any way in which indirect aid could be given to the Society, and in discussing the question he would deal with the work of the Society under the three chief heads which had been mentioned.

The Board believed that the valuable work done by the Royal Veterinary College constituted an equitable claim to assistance from the State, and representations on the subject had been made to the Treasury, who seemed not unwilling to provide the money for a grant. At the present time the principle was practically acknowledged, and the only matter in dispute was the amount of the grant The Board were very hopeful that a substantial sum would be allocated for this purpose, and, if they were thus able to give a grant to the Royal Veterinary College, it would be possible for the Royal Agricultural Society to withdraw, or considerably reduce, their grant of £200 a year, and so diminish, for a time at least, the burden of charge upon the decreased resources of the Society

The Board fully recognised the value of the work done by the Royal Agricultural Society in the direction of examinations, and they were strongly of opinion that it was most desirable to have one central standard examination for the whole country. At present there were several bodies holding examinations at different centres with varying standards, and some measure of co-ordination was urgently needed. The Board believed that this could be best achieved by the formation of a National Examination Council, on which would be represented the Board, the Royal Agricultural Society, the Highland Society, and the Agricultural Colleges and Institutions. If this could be done he thought the Government should contribute a substantial sum towards the expenses, and that the other adhering bodies should each contribute some smaller amount. In this way, also, the funds of the Royal Agricultural Society would be relieved; since, instead of spending, say, £250 a year on the examinations it might be sufficient if they contributed only £50 a year.

As to the agricultural research work and the Woburn Farm, Sir Thomas alluded to the great and important problems from an economic point of view which awaited solution in the field of agricultural research. He felt sure that in many directions research would result in discoveries of very great practical value. At present such work was being carried out by many agencies at isolated stations in different parts of the country, and, here again, what was needed was better organisation and co-ordination. If there were some representative body, well equipped with funds, comprising representatives of the Board, the Royal and Highland Societies, the Colleges, the Rothamsted Trustees, and possibly some of the County Councils, there could be no doubt but that more work would be done, and the whole would be better organised. He thought that if such a body were formed, somewhat on the lines of the Fruit and Cider Institute, the Government would not be unwilling to provide sufficient funds for the purpose when a suitable opportunity presented itself. So far as the Royal Agricultural Society was concerned, the Board would hope that Woburn could be included in such a scheme, and that the valuable services of Dr. Voelcker would still be available in this direction. If it proved practicable for the Royal Agricultural Society to co-operate in such a scheme it would entail a reduced charge upon the funds of the Society without any diminution of the efficiency of the work as at present carried on.

In conclusion, Sir Thomas said that the Board were prepared to take the initiative at once by formulating schemes on the lines above indicated, which would be submitted for the consideration of the Royal Agricultural Society and others concerned at an early date.

The deputation then withdrew, after an expression of thanks from Mr. Cornwallis on its behalf for the courtesy of Sir Thomas Elliott in receiving it.

NORTHERN NOTES.

The fat stock shows are drawing to a close, and perhaps the time is opportune for a consideration of their value as educational institutions. Some consider the exhibitions to rank higher than the agricultural shows of the summer, but those who hold that view are entirely mistaken. For at the fat stock gatherings we see only those animals which have not been selected for breeding purposes—the very best specimens are not to be met with, although the best types may be seen and recognised. On the other hand, the finished and matured animal is to be seen at Christmas time in full war paint trained to the hour, and ready to be "turned off" in the pink of perfection. It is impossible to deny that these Christmas fat shows are not highly beneficial to the agricultural visitor, for they prove to him what results have been attained by careful feeding; and, of course, the thing that has been done once may be done again.

At our summer meetings we see little of cross-bred stock, the stock aggregated are almost entirely pure-bred animals, and the tyro can form no opinion of the capabilities of crosses between particular breeds. But in the fat stock show he finds cross-bred animals very much in evidence, and he soon learns that for the purposes of mere meat production the first cross between two distinct breeds may surpass either of its progenitors. There is another lesson which has to be learnt, and which practical experience soon teaches those who essay the experiment: that by breeding from the cross, especially where both parents are the produce of a first cross, most disappointing results are obtained, the progeny being usually weedy and of a nondescript type, combining in themselves the worst properties of both the breeds from which they sprang.

In the course of time, by careful selection of the best types, and by occasional recourse to fresh infusions of blood from one or both of the original races, the undesirable features may be eliminated and the valuable properties perpetuated; but this is in every case effected only by the exercise of the greatest skill and judgment through a long series of years. Marked success attended the efforts of the founders and originators of the New Oxford breed of sheep—as the Oxford used to be termed—even greater success attending the labours of Bakewell in the evolution of the New or Dishley Leicester, although these prefixes have long ago been dropped; but many would-be imitators have totally failed to successfully attain a similar purpose.

There is, however, no doubt that for the general purposes of the farm—apart, of course, from breeding purposes—cross-bred stock often prove more profitable than pure-bred animals. By cross-bred is here meant the first cross between two pure-bred animals of different breeds, and not the result of a second cross, nor any similar hybrid nondescript. The cross-bred animal often, on the whole, surpasses the mean of his parents in many ways. He is larger and hardier, and possesses greater aptitude for fattening. A sheep may have a fleece decidedly more valuable that the mean of the fleeces of his parents, and a cow may be a better milker than her dam and better than the dam of her sire. The cross-bred is more vigorous and more vivacious than its parents, often more so than either of them, but it has no prepotency, it cannot reproduce in its offspring those properties which render itself so valuable.

The change of Government is causing many other changes. The political crisis has caused a fluttering in a good many dovecotes, and has disturbed many arrangements for the Christmas festivities. Shortly after the New Year comes in many farmers' clubs and associations hold their annual gatherings, when local M.P.'s and other notabilities are in request. The provisional arrangements for these are all disordered, and one very important meeting—the annual meeting and dinner of the Yorkshire Union of Agricultural Clubs, usually held in January or February—has been postponed.

Cabinets come and go, but agriculture, the oldest of our industrial pursuits, remains; and it is earnestly to be desired that the new President of the Board of Agriculture will lend a favourable ear to the suggestions recently made by the Central Chamber. There are several measures, of a non-party nature, which have recently been before Parliament, but which the late Government failed to press forward—whether from the lack of will or the lack of the power, it is hard to say—although it is clear that the late Minister of Agriculture did his best in their support. It is to be hoped that his successor in office may prove equally willing, but more successful in dealing with these matters. M. Y.

December 8, 1905.

Midland Notes.

The Christmas fat stock sales have opened promisingly, prices of £42 15s. for a pair of heifers, £45 5s. a pair of bullocks, and 70s. a head for a pen of wethers all which were realised at Sutton Coldfield on Tuesday, not leaving much room of complaint. But a touch of frost is wanted to put life into the market, both for stock and grain. As to corn, by the way, recent threshing has revealed some disappointing results. "Instead of just clearing my expenses," said a Nottingham farmer to the writer, "I shall make a loss I cannot any way afford"—this a propos of wheat. Frost, by the way, would be ill-timed for growing crops just now, for although the earlier sown corn is now a level and sturdy plant, there are many acres, particularly towards the north and east, which want a further spell of sun and mild weather to stimulate a somewhat feeble growth, and give them a good start in the way they should go.

In the general election which is now upon us, there will be much heard in the Midlands of farming interests and the land laws. The Chambers of Agriculture in Warwickshire, Worcestershire, and Staffordshire, have all been considering what to demand of Parliamentary candidates in the way of pledges and promises, and in the first-named county, at any rate, there seems to be a very general determination not to give support to any one who does not show a genuine inclination to work for the welfare of agriculture, and to signify adhesion to the farmers' own programme of needful reforms.

But while the Butter and Dogs Bills to all rating reform, and the regulation of excessive railway rates, with, perhaps, a Land Purchase Bill, some on the lines of Mr. Jesse Collings's are the main planks in the ordinary farmer's platform, there is another set of workers with a totally different catalogue of complaints. There are sturdy malcontents, like Mr. Fred Horne for instance, and many farmers in Worcestershire, who stand out for greater security of tenure for occupiers, and much more compensation for improvement due to good farming when a tenancy comes to an end.

This is not a political article, nor the proper place to dissect political letters and speeches. There will be no doubt—there is already—some nonsense talked and written on both sides, and much exaggeration. The attacks upon landlordism in the person of Colonel Kenyon Slaney, for instance, were pushed unprofitably far for his assailants when they drew signed testimony from his tenants to his consideration and fair dealing. It is going rather far, too, to say with Mr. Horne that bogus claims are "often" made by landowners; or to argue with the Northamptonshire farmer to whom a leading Unionist daily paper gives nearly a column of space, that a rent must necessarily be iniquitously high because a farmer fails to make a profit. There are plenty of other causes for bad business besides high rents—which, after all, generally represent about the amount that the farmer himself reckons he can afford to pay.

All the same, there are matters one would like to see altered. It cannot be good for agriculture that so large a proportion of English land should be in the hands of owners who have but a life interest in it, or that so many farms should be let on nothing better than a yearly tenure. Then again, the mortgages and other heavy charges which so many estates have to bear, and the sheer folly of ignorant and pretentious by-laws which make building needlessly troublesome and expensive, are other influences which tend to discourage landlords' improvements, and one need not be a political partisan to discover cause for further safeguarding the interests of a good tenant on the termination of his tenancy.

It is unfortunate that in certain cases—happily one cannot say very many—it should be just the good tenant who deals well and liberally with his land, who should be least secure. It is the agent's business, where management of an estate is committed to his care, to make the best he can out of it. Very likely there is that troublesome mortgage interest to think of, and very probably he knows the owner finds it hard to keep up the old position of his family upon a much reduced income. So he is prone to have regard to the farm rather than the farmer, with the result that the tenant who had improved the general condition of his holding is apt to find less consideration than he deserves. If he is not content, the agent argues there will be no difficulty in discovering another man ready to take up so good an occupation on equal or better terms.

THE FARMERS' CLUB.

Annual Meeting—The Quality and Yield of English Malting Barley Discussed.

The sixty-third annual general meeting of the Farmers' Club was held at 5, Whitehall Court, S.W., on Monday, Mr. W. A. Prout, Chairman of the Club, presiding.

The CHAIRMAN: As this is the annual meeting, I call upon Mr. Anker Simmons to propose the adoption of the report.

Mr. ANKER SIMMONS: I beg to move "That the accounts and report of the Committee for the year 1905 be received by this meeting and adopted." I will not detain you for many moments, but I would like to briefly refer to one or two items that are dealt with by the Committee in their report. In the first place, with regard to the accounts, it must be a matter of satisfaction to every member of the club to know that we are £157 15s. 8d. better off than we were a year ago. That is the result, to a great extent, of the increase in the number of members, the present number, as you will see, according to the report being 870. I am glad to say that at the Committee meeting held previous to this meeting we received over thirty applications for membership, so that we have every reason to look forward to a very considerable increase in that number. I think you will agree with me that we are extremely fortunate in having been able to secure the services of Mr. H. Trustram Eve as our new secretary. We all know him well enough to be assured that the business of the club will be extremely well looked after. I think, too, knowing what I do of him, that we are also extremely lucky to have Mr. Magar as his assistant.

We have also been fortunate enough to secure the services of Mr. F. E. Muntz, of Umberslade, as our chairman for the ensuing year, and I think the Committee is to be highly congratulated upon that. (Hear, hear.) Mr. Muntz is a most excellent man. He is a thoroughly practical man, and I am sure the club will go on and prosper under his rule. Then, at the end of his year of office, we can look forward to the election of a gentleman whom we now have as vice-chairman for the year, Mr. Harold Howard, whose name is also a well-known name in the agricultural parts of the country. In conclusion, the only other thing I have to say is to impress upon every member of the club the desirability of increasing the membership a great deal more.

Mr. STIRTON seconded the motion for the adoption of the report. The resolution was then put and carried unanimously.

The SECRETARY (Mr. H. Trustram Eve): The following members of the Committee retire and are eligible for re-election:—Messrs. Barfoot Saunt, Gar Coles, T. A. Dickson, W. J. Henman, S. Kidner, John McLaren, F. E. Muntz, W. A. Prout, T. Stirton, George Street, A. Voelcker, J. Wrightson. Will someone kindly propose that they be re-elected or propose any change?

Mr. STRATTON: I beg to propose that they be re-elected.

Mr. H. L. BLUNT seconded the motion, which was carried.

The CHAIRMAN: In consequence of the death of several members and the resignation of one or two others, we have had to recommend four new members for the Committee. The names suggested by the Committee are:—The Hon. C. H. Strutt, M.P., Mr. W. D. Knight, Mr. Dennis, and Mr. Amos. Are you agreeable to accept the recommendation of the Committee?—Agreed to.

A paper entitled "The Quality and Yield of English Malting Barley" was then read by Mr. E. S. Beaven, of Warminster, Wilts. It will be remembered that we gave some extracts from the paper in our last issue, so we now give only the discussion, which was as follows:—

The Discussion.

Dr. WILLIAM SOMERVILLE (Assistant-Secretary, Board of Agriculture and Fisheries): Barley is one of the most interesting cereals. It is one in which we think we have attained a great measure of success as regards quality, and it is a crop which is more easily influenced, apparently, by agricultural, climatic, and geological conditions than any of our commoner cultivated agricultural crops. The difference, I suppose, between common barley and first-class barley this year may be represented by a difference between 25s. and 35s. per quarter, and I take it that no amount of attention to cultivation would produce such a large difference in the value of, say, wheat or oats. You find barley, cultivated, and cultivated successfully, and cultivated with a production of excellent quality, in the most unexpected districts sometimes. You have an excellent barley produced in the North-East of Scotland; you have barley in the South-East of Scotland; then coming further south, you get to what one may call the pick of the barley districts—that is to say, Norfolk, Suffolk, and Cambridge but you find barley of the very highest quality grown in the South-West of England, a district where the rainfall is high and where, I think I may venture to say without contradiction from the head of the Meteorological Department, that the sunshine is less than it is in the East. You even get first-class barley grown away out in the far West of Ireland, the County of Galway. As far as my observations go, as a general rule the best barleys are grown in counties which touch the coast. We are fortunate, I think, in having had one or two excellent workers in the improvement of barley, and, without desiring to indicate who those workers have been, names at once arise to one's mind, especially that of our late lamented friend Mr. Stopes. The Brewers' Exhibition, which he had so much to do with, gave us a great deal of most useful information with regard to the conditions under which barley may be successfully grown; and these results confirm, I think, to a very great extent the results that have been scientifically obtained, for example, at Rothamsted. I am not going to trouble you with any figures, but I should just like to indicate, for example, that in connection with the Brewers' Exhibition, manure has been found to be a very influential factor. I may say that in the last two years for which Mr. Stopes' Reports are available, it is found that a very large number of the prizes were obtained from wheat crops which had been produced without the direct agency of any manure at all, and from that I conclude that high quality is associated with not a very great quantity of available manure in the soil.

The Time of Sowing.

The time of sowing appears to be a very influential factor, and, as a general rule, you find that the results are precisely opposite to what you obtain with wheat. I think I am right in saying that the experiments to which I have already alluded in the case of wheat show that a short growing season produces a strong wheat, a highly nitrogenous wheat. On the other hand, in the case of barley, you find that a long-growing season produces a starch growth; that is to say, in the case of wheat a short season of growth will produce a good quality; in the case of barley a long season will produce the same effect. In the year 1900 there was only one autumn-sown barley shown at the exhibition, and that one auaumn-sown barley obtained the champion prize. In the same year there were six samples of barley shown which had been raised from grain sown in February, and half of the total number obtained prizes—three out of six; whereas when you come to early-sown barley you find that only six out of twenty-four of the samples shown obtained prizes. Then we all know what an influence rotation has. We find, for example, in 1900 that thirty-three prizes were gained by crops that had succeeded another wheat crop, and no other rotation has anything like as many prizes. Again, I suppose it is due to the fact that one wheat crop exhausts the ground to a certain extent of the available nitrogen, and the barley crop succeeding that wheat crop finds the condition suitable for the production of grain of very high quality. There is no doubt that the great bulk of the fine barleys come off light land, but we also find that it is quite possible to produce barley of the very highest quality off heavy land; and I think I am right in saying that this year the champion barley of England, and what is probably the champion barley of the world has been grown upon a strong clay land. The grower of that barley is here to-night, and if you can possibly induce him to tell you how he produced the champion barley, the first prize barley in all England, it will be a most excellent thing for the Club. I see there are a great many men here who are capable of speaking to the point much better than I am, and I hope they are willing to speak; but at all events none of you can exceed the heartiness with which I propose a very cordial vote of thanks to Mr. Beaven for the particularly valuable paper he has given to the Club. (Cheers.)

Practical Experience of Barley Growing.

Mr. CARY COLES (Winterbourne, Stoke, Salisbury): Mr. Chairman and gentlemen,—Mr. Beaven, in his valuable and interesting paper, has treated barley from the scientific point of view, and Dr. Somerville has followed him to a great extent in the same direction. I propose very briefly to give you my experience of barley-growing as a practical agriculturist. The soil which I farm is a light gravelly loam on a chalk sub-soil. Barley is grown in the four-course rotation, succeeding a white straw crop generally. At least 95 per cent. of the barley is grown that way; a small portion, perhaps, is grown after mangels—which is another very good preparation—and occasionally after vetches fed off the preceding summer, and the land simply fallowed. That is a very good preparation for barley, both for crop and quality, but it is rather an expensive one, and we sheep-breeders lose a turnip crop entirely by so doing. I chance to know, however, two or three people who work that way and grow a very good crop. In my own district, for quality barley my practice is to sow the barley as early after January 20 as the land will work well with. If you go in for crop, I believe any time up to March 25 will do. When you go in for a crop, I advise at once sowing something else than spring barley. I should prefer to sow a six-rowed barley if you go in for a crop. I can grow more value per acre with the six, if I get a low malting quality, than I can with any two-rowed sort. With reference to the sowing, I prefer to drill. After the experience I have had, I am very particular to get my land to work if possible so well that I can always use a two-horse roller in front of my drill.

I believe there is a good deal in sowing barley an even depth, and that depth should be as near 1½ in. as possible on my land. If your barley is sown at an even depth it comes away altogether, and when it does that it generally goes on and ripens altogether, which is a great advantage in malting samples. For the last few years we have top-dressed, as a rule, all the stubble barleys. The top dressing I use is about 3 cwt. of superphosphate, and from ½ cwt. to ¾ cwt. of nitrate of soda. I do not use so much nitrate of soda as my friend the Chairman; I am very shy of nitrate of soda for quality in barley. In my experience it increases the crop at the expense of the quality if you go over ¾ cwt.—certainly in my district. With regard to the barley that won the prize in Class F at the Growers' Exhibition this year, I was tempted at last to send some samples to the Brewers' Exhibition (two years ago I should have been afraid to have done such a thing), and, fortunately, I won. I think I ought to say, in justice to the people whose manure I had, that it was grown with a barley manure which on analysis should contain 20 per cent. of soluble phosphates, about 4 or 5 per cent. of nitrogen, and 2 per cent. of potash, and about 3 cwt. per acre was used. I slightly differ from what my friend has said in the paper with regard to variety. In practice I am obliged to differ slightly.

With regard to the variety, I grow Chevallier, for this reason: If I grow Archer, I quite admit what my friend says that you grow a bigger crop, but it is of a dull grey colour, and unless it is a very favourable season it is just outside the malting circle, and that means, not the difference between 25s. and 35s., as Dr. Somerville said, but 5s., or, on an average, 3s. a quarter. In very favourable seasons the Archer barley is all right, but in an unfavourable one I just miss the best customers—Burton men are the best buyers of malting barley in my district. I have tried Goldthorpe, and my objection to that is that not only is the straw very brittle, but also the ear. If you get it a week or a few weeks over-ripe through bad weather, you have half the ears breaking off in the centre in an awful way. Further than that, it is not the thing to grow it in the south-west of England unless you can get maltsters there who will malt it. Out of twenty barley buyers in Salisbury market, fifteen would buy Chevallier and would not buy Goldthorpe or any of the wide-ear varieties. With reference to the question of harvesting, I hear a great deal against cutting barley with a binder. Since binders have come out I have used them for wheat, and I have followed it up for barley generally, unless it is very full of clover. I find by giving them plenty of field room, and keeping the machines up if they go down, and leaving them in stack a couple of months after they are harvested, I have no difficulty. The greater part of the barley I have grown is malting barley. The barleys I showed at the exhibition were sheaf barleys; in fact, all my barleys are sheaf barleys with the exception of two acres out of 150, which is not worth speaking of.

Influence of Weather on Barley.

Dr. SHAW (Meteorological Department): Mr. Chairman and Gentlemen,—Mr. Beaven was kind enough to invite me to the meeting this evening, otherwise I should not have got so far as hesitating as to whether I had any business to be present at so technical a discussion. He wished me to say something with regard to the subject which does form part of his paper, namely, the relation between yield and the climatic conditions, and, with your permission, I will say a word or two on that part of the subject. I have looked at Mr. Beaven's figures, and I am

bound to say that I do not find that they are so altogether recalcitrant as he seems to think. He makes the remark that the averages taken over larger areas seem to show that the highest yields are in the driest and coldest districts, and vice versâ, but there are exceptional areas within the larger districts. That, of course, is true. What the exception may be due to I cannot pretend to say. The variations in the yield for a particular county—take Kent, for example—probably depends upon a number of circumstances that could not be stated in any generalised way; but if you take his first statement that the yield is better in the colder districts and in the drier districts, and if instead of taking, as he does, either the individual quarters or the total for the year, one takes the second and third quarters—that is to say, the spring and summer quarter—then one gets these figures for the different districts. If you take north-east, east, south-east, and south-west, the yield goes as Mr. Beaven shows in his paper, 35, 34, 33, and 31, and the temperature goes, taking the average of the second and third quarters, at 54, 55, 57, and 57. So that there is a regular sequence down from the better-yielding districts to the worse-yielding districts, the same sequence as between the cold districts and the warm districts, with the exception of the south-west. In the south-west, although the temperature is a little colder than in the south-east, yet the crop is less; but there the rainfall is 4 in. higher than it is in the east, so that Mr. Beaven's statement appears to be very satisfactorily borne out.

If you compare the three districts which have equal rainfall you will find that the coldest district gives you the best yield, and in the two districts, east and west; where the temperature is about the same, the drier set gives you the best yield. But in these matters, in consequence of the effect of the soil and local circumstances, it is rather difficult to compare from the point of view of climate the different districts for the same year. It is better, if possible, to compare the same district for a succession of years; in that case you eliminate all the difficulties as to the local variations of soil, and you compare the effects of the same soil. For the Royal Agricultural Show at Park Royal last year I had a little diagram drawn out. It is intended to exhibit the relation between the warmth of the spring and summer combined and the corresponding yield of barley. I think it shows tolerably conclusively—not absolutely conclusively—that a cold season is favourable for a large barley yield. Whether that is the experience of practical farmers or not I am not able to say.

There is another point to which I would like to direct your attention. I have put in a blue curve, which represents the earliness or lateness of the corn harvest, taken from Morley's Report. If it goes up high, it shows it is early; if it goes down low, it shows that the harvest is late. If you look again you will see that when the spring and summer are warm, then the harvest is early, and when they are cold it is late. That seems to me to be reasonable — whether it is or not I do not quite know, but it follows in consequence that practically when the harvest is late the barley yield is good, and when the harvest is early the barley yield is poor. Whether that is true or not the practical farmers must find out, but, so far as the figures go, that appears to be borne out. That, I think, is a matter which may be of interest to you, and it seems to me to bear out what Mr. Lisle has said, according to the paper, where he speaks of the late ripe barley, which is evidently the best suited to his land, and goes into a long explanation of its merits.

Before I sit down I should like to say, if you will listen to me for another minute, that I was extremely surprised at the regularity with which these relations between climatic conditions and crops show themselves if one takes averages over sufficiently large districts. I need not, perhaps, refer to the diagram showing the relation between the rainfall and wheat. I have noticed within the last few days that the wheat yield for England has been announced as being 32.66 bushels per acre, and that comes within two bushels of the figure that is dependent upon the amount of rainfall in the previous autumn shown in the diagram. So that this year makes fifteen years out of twenty-two in which the rainfall gives you the means of computing the subsequent yield of wheat within two bushels. Some time or other I hope to be able to put before the public generally the succession of wheat yields for the last twenty years, showing a sequence so regular that one can put it in a mathematical formula.

From an Experimental Point of View.

Mr. A. D. HALL (Lawes Experimental Station, Rothamsted, Harpenden): I do not know that I can do more than confirm from my own experience a good many of the things which Mr. Beaven has set out in his paper. One thing which does come out very strikingly in the examination of some of the Rothamsted results is the fact that the yield and the quality of the crop are not things which vary in the opposite sense. It is too often supposed that the power of growing good barley depends practically upon starving the land, that you have got to crop out any superfluity of fertility there is in it, and then get a small yielding plot if you want to have a comparatively high quality. I think our results agree exactly with those of Mr. Beaven that that is not the case, that you cannot get a barley of high quality unless you have a certain amount of food in the land.

When we are dealing with barley we are dealing with a plant that is subject to much more fluctuation of quality than wheat. When you are dealing with wheat it is very hard to influence the quality by such things as manure, date of sowing, and so forth. You bring about certain small fluctuations, but you do not bring about very large ones. The variety that you sow is dominant over everything else, and although, as has been shown, certain soils will always yield stronger wheats than others, the variation you bring about in that way is comparatively small compared with the variety. But as soon as you come to deal with barley, whether it is because of the shorter growing period or whatever it may be, you have something which is capable of much greater fluctuation, which you can influence much more by the character of the manure and by the preparation that you give to the soil than you can in the case of wheat.

The CHAIRMAN: I am afraid I must now bring the discussion to a close owing to the lateness of the hour. We have had a most interesting paper from Mr. Beaven, and, I think I may say, a very learned discussion on it.

The vote of thanks to Mr. Beaven was then put and carried with acclamation.

Mr. BEAVEN, in reply, said: I thank you very much for your great kindness in listening to what I am sure was a very long paper. I could not help feeling all the time I was speaking that there were a great many gentlemen here who knew a good deal more about the subject than I do—in fact, that it was rather presumption on my part to talk at so great a length about the subject of barley. Anyway, I am sure that one of the facts which has come out is that the more closely we study our plants the more we arrive at the conclusion that what we really know is very little compared with what we have yet to learn. As we have not by any means exhausted this subject, may I, before sitting down, say that it will give me very great pleasure indeed if at some time during the summer, when I hope to have all these varieties planted, you could come down and examine them on the spot at Warminster on some convenient day which we can fix upon. I thank you very much indeed for your kindness.

Vote of Thanks to Mr. Muntz.

Mr. THOMAS LATHAM: Gentlemen, I have the pleasure and the very great honour of proposing a vote of thanks to our Chairman for the way in which he has looked after our affairs during the past year. We have had a most excellent Chairman, I do not think he has missed a single meeting. All of us who sit with him on the Committee work with him with the very greatest pleasure indeed. No doubt in the last paper you have had sent to you you saw recorded the great treat that Mr. Prout gave to the Committee of this Club by showing us over his occupation and telling us of the way in which he farmed it. It was a treat that very few of us will ever forget.

Professor WRIGHTSON: I have been asked to second this resolution, and I do so with very great pleasure. I can remember Mr. Prout's father, and I have known Mr. Prout for a great number of years. I heartily endorse what Mr. Latham has said with regard to his hospitality and the valuable lessons which we learned by inspecting Mr. Prout's farm and his experiments.

The resolution was put to the meeting by Mr. Latham and carried with acclamation.

The CHAIRMAN, who on rising to reply was very heartily received, said: I thank you very much indeed for the kind and altogether too flattering way in which the resolution was proposed and passed. I have had rather an eventful year, clouded by the loss of two very worthy members, Mr. Druce and Mr. Read; but in other respects it has been a year of great pleasure to me.

The meeting then terminated.

At a recent meeting of the Nantwich Farmers' Club Mr. James Sadler, secretary of the Cheshire Milk Producers' Association, criticised a report recently presented to the Cheshire County Council in which Mr. Carter Bell, public analyst for the county, expressed the opinion that if farmers fed their cattle well and kept them in good condition the result would be first-class milk. It was, he said, a fact that could not be contraverted that no matter how some cows were fed they could not be made to yield milk with 3 per cent. of butter fat in it. Like other speakers at the meeting, Mr. Sadler urged that the Corporations of Manchester and Liverpool ought to obtain milk samples intended for analysis at the farms, and not at the receiving stations.

EAST ANGLIAN NOTES

For most of the past week grey mist—half fog, half rain—has blurred, and, in many districts in East Anglia, completely obscured the landscape from the traveller's eye, while on all sides we hear from farmers that a sharp December frost would be most welcome. That a long frost would not now be out of place is demonstrated by the fact that trees and herbs have commenced to take winter's continued mildness as the return of spring, while the leaf-bud is seen to be active on every side. Not only do the arable farmers require frost now, but stock-keepers would be glad of colder weather, inasmuch as it would materially stiffen meat prices and benefit those who have stock of some kind to dispose of at this time of the year.

Apart from cattle shows and Christmas cattle sales, all of which the East Anglian farmers take a great deal of interest in, it must now be born in mind that farmers in the Eastern Counties of England send to London and large Midland towns a considerable number of British-bred poultry for Christmas, and, in fact, East Anglia has attained an important position in this produce. This year, according to some accounts received by the writer, this market will see a greater supply of poultry from East Anglia than has ever been known. In fact, it is to be a record year.

Late on the morning of Tuesday last, a sad accident occurred at Messrs. Ransomes, Sims, and Jeffries' Works at Ipswich. A man was engaged in painting the inside of the roof of one of the shops that form the Orwell Works, and in this case was about thirty feet from the floor, when suddenly the ladder upon which he stood fell from under him, and the poor man, whose name was Fred. Wilkinson, fell on to some iron. The ambulance men connected with the works were soon on the spot and rendered first aid, and, on a surgeon arriving, it was found that the poor man was suffering from fracture of the right elbow and fractures of the nose and other severe external injuries. He was conveyed as quickly as possible in the horse ambulance to the hospital, where he remains an in-patient.

From what was stated at Stowmarket and Chelmsford by farmers attending these markets, the Smithfield Cattle Show must indeed have been crowded, and the markets held on Wednesday throughout East Anglia must have missed many a familiar figure, for never before have so many East Anglians visited at one time the Agricultural Hall, Islington, in connection with this show. The Suffolk Successes in the Carcase Competitions attracted a great deal of attention from farmers from all parts of the Eastern Counties.

As a prominent Suffolk agriculturist, Mr. Frederick George Cook, of Saxtead Lodge, Framlingham, who died on December 2nd, will be greatly missed, not only amongst his friends in the immediate neighbourhood of his home, where he spent an active and useful life, as well as rendering good public service on behalf of — particular locality, but his absence will be felt beyond the district of Framlingham inasmuch as his success as a breeder and exhibitor brought him into considerable prominence far from his native county. The deceased gentleman was a marked member of the Suffolk Horse Society and one of the founders of the Framlingham Live Stock Association. It was his admiration of the Suffolk horse, as well as his success and knowledge of the county breed, that made his services requisite as a judge of Suffolks at the Royal as well as county shows.

One would hardly have thought that there was so much life in the rural districts of Essex, especially in the Roothings, for does not an old writer say they (the Roothings) are like the axle of a wheel, they stand still while all the world around them is moving. The meeting at Leaden Roothing was a great success, and there were, besides others, at least forty landowners and farmers of the neighbourhood present. It was stated that the scheme had been so enthusiastically taken up at Bardfield and other places north of Dunmow, that applications had been received for ordinary shares to the value of £1,250, while the preference shares were nearly all applied for. The total cost of the line was estimated at £7,000 a mile. Mr. Isaac Mead, the miller of Margaret Roothing, said the saving effected by the new railway to farmers would be very considerable, for they would be able to do with one horse what they now did with three. Some farmers in the Roothings had to send now their milk seven miles by road to get to the nearest station, and at the present time it cost a person 13s. to get to London and back by road and rail, whereas when the line was made the return fare would be about 4s. 6d. to the Roothings. Other speakers followed in the same tenor, and the chairman (Mr. Barclay Heward), in closing the meeting, said he had travelled seventy miles to be present.

THE FARMER'S DINNER.

The Annual Dinner of the Central and Associated Chambers of Agriculture and the Farmers' Club was held on Tuesday evening at the Trocadero, London, under the presidency of the Earl of Derby, K.G., the Chairman of the Central Chamber. There was a very large attendance, among those present being Sir Thomas Elliott, Secretary to the Board of Agriculture; Mr. Courtenay Warner, M.P., Mr. F. A. Channing, M.P., and Mr. W. A. Prout, Chairman of the Farmers' Club.

Lord Derby, in proposing the toast of "The King," said His Majesty had distinguished himself as a successful breeder of stock. Precept was all very well, but it was tenfold better when backed by example. (Cheers.)

After this and the other loyal toasts had been honoured, the Chairman read a letter from Mr. Ailwyn Fellowes, M.P., in which he said it was a great disappointment to him that, on the day of resigning his office as President of the Board of Agriculture, he was prevented from meeting the members of the Central and Associated Chambers of Agriculture and the Farmers' Club at their annual dinner, the reason being that he had rather badly strained his voice, and the doctor had forbidden him any public speaking for the next fortnight or three weeks. After that he hoped to be fit to enter the coming fray—(laughter and cheers)—though it would not be so congenial to him as addressing meetings of agriculturists. He could not give up the Presidency of the Agricultural Department without expressing his most cordial and grateful thanks to agriculturists all over the kingdom for the courtesy and kindness they had always shown him during the three years he had been connected with the department. The work had been a great pleasure. He had not only secured many friends, but he had been associated with a body of men in his office who were second to none in the public service and who were animated by a single-minded desire to do everything they could on behalf of the agricultural industry. Red tape was absent from the department. What it suffered was from lack of funds, and he trusted that when the Treasury was overflowing, the wants of agriculture would not be forgotten. He wished agriculturists better luck in the future, and, although he was now out of office, he would do everything in his power for their benefit. (Cheers.)

Mr. F. A. Channing, M.P., in proposing "Success to Agriculture," referred to Mr. Fellowes's letter as an interesting, characteristic, and most touching farewell of his friend, who had raised agriculture above party and rendered it great service. He hoped in the new Parliament agriculture would hold no second place, but would be frankly recognised as the fundamental industry and the root of national prosperity. (Cheers.)

Sir Thomas Elliott, K.C.B., Permanent Secretary to the Board of Agriculture, in responding, paid a graceful compliment to the ability and kindliness of his late chief, who, he said, was a practical man and a breeder of stock; and he expressed the hope that the next President will be in no way inferior to Mr. Fellowes in those respects. The speaker said he was a little tired of what might be called "post-mortems" on agriculture. Every one seemed to look upon agriculturists as practically dead, or at any rate with little kick left in them. (Laughter.) But in his judgment, the British farmer was still absolutely the best farmer in the world. (Hear, hear.) He produced more per acre in regard to corn crops than any other farmers, while as to live stock, every other country that wanted to improve its stock had to send to England. With regard to animal diseases, there had been a great diminution, pleuro-pneumonia, foot-and-mouth disease, cattle disease, and rabies had practically disappeared. They had had some uphill work in regard to swine fever, but each year during the last four years had been better than its predecessor, and he believed that with a little more energy this disease also would be conquered. From local authorities in rural districts they had a right to expect an education that would fit their boys to become good farmers like their fathers before them.

Mr. Charles Bidwell, President of the Surveyors' Institute, in giving "The Central and Associated Chambers and the Club," lamented that it had not been found possible to pass two such valuable measures as the Sale of Butter Bill and the Dogs Bill, and advocated the introduction of a permanent and comprehensive system of local taxation under which agriculture would get the relief which it deserved.

Lord Derby, in responding, said whether they looked backwards or forwards they had an anxious task before them, and one which would require the utmost efforts of every man who belonged to the Chamber. It was difficult to realise how great was the change that had taken place, not only in the mode of farming, but in the manner in which it was looked upon by the community. We had risen by leaps and bounds during the last thirty or forty years, and had become a great manufacturing community and partly for that reason very largely an urban population. The evils of that were obvious. There was one cry now heard everywhere, and which ought not to be long resisted, and that was "Back to the land!" He did not include those schemes by which people unversed in agriculture were to be put upon the land at various places, and artificially nursed. He feared that the agriculture which arose under that system would be at the best a very puny plant. His lordship expressed the view that agriculture would be benefited if only railway managers would meet producers halfway in the matter of small consignments, and on the subject of main roads he said he considered they should be maintained by the State, and not by the individual. Where heavy traffic passed through a locality without benefiting it, it was hard to throw upon that locality the maintenance of the road. (Hear, hear.)

Mr. W. A. Prout, outgoing Chairman of the Farmers' Club, also responded for that body, this bringing a pleasant evening to a conclusion.

Central Chamber.

Annual Meeting.

The annual meeting of the Central and Associated Chambers of Agriculture was also held on Wednesday, the Earl of Derby presiding.

The report of the Council showed that the total strength of the Association now stands at 130. In a reference to the death of Mr. Clare Sewell Read, it was stated that he was one of the founders of the organisation, and was chairman in the third year of its existence—1869—since which he had served continuously on the Council.

There was two facts worthy of notice as bearing on his later work, namely, his emphatic statements in his minority report to the Beer Materials Committee in January, 1899, as to the inadequate protection of the public against the use of deleterious substances in the manufacture of beer, and his generous action in passing on the sum of £200 handed to him as the balance over and above the cost of his portrait in 1896, to the Royal Agricultural Benevolent Institution, in order to endow a grand of £5 to the highest unsuccessful Norfolk candidate. The Central Chamber's votes at the annual election of the Royal Agricultural Benevolent Institution, were given to Mrs. Manfield, widow the late Mr. Manfield. The Butter Bill was this year re-introduced for the fourth consecutive session. During the whole of that time the public demand for the measure had increased, and opposition diminished; yet once more the Council had to report that the Government made no effort to give effect to the wishes of agriculturists.

Mr. Fitzherbert Brockholes (Lancashire) complained that the paragraph in the report did not sufficiently explain the reasons why the Butter Bill was so urgently needed. The demand for the measure had increased, not only from agriculturists in this country interested in the production and sale of pure butter, but from Canada and the Australian colonies. Leading Grocer Associations demanded such a measure in the interest of honest traders, and it was also urgently required in the interest of consumers, especially the poorer ones, who were the chief buyers of cheap butter, and provided the lion's share of the enormous profits made by the manufacturers and dealers in "faked" butter. They ought to emphasize the point that a Bill was required to protect honest traders and consumers quite as much as agriculturists, and they regretted that time could not be found to proceed with the measure, or at least to read it a second time, and refer it to a Select Committee. In view, however, of the great importance of the matter, and the danger to the dairy industry, and other interests which further delay would involve, they should express the opinion that the Bill ought to be passed practically in its present form, without wasting further time, and that the other forms of adulteration which had recently arisen should be dealt with in a fresh measure. (Applause).

Mr. Martin Sutton intimated that he recently addressed a conference of grocers upon the Butter Bill. Grocers were thoroughly sound on the question, and were determined to have the Bill passed. If dairy farmers wished to have the Bill carried into law, they must enlist the sympathies of those other than agriculturists.

Mr. R. L. Everett (East Suffolk) said the amended clause Mr. Brockhole desired to have adopted did not contain the censure which the report did.

Finally Mr. Brockhole's suggestions were incorporated in the report, which was adopted.

The monthly meeting of the Council of the Central and Associated Chambers of Agriculture was held on Tuesday, and was followed by the annual meeting of the Central Chamber. The Earl of Derby presided.

Destructive Birds.

A letter was read from Mr. O. V. Aplin, member of the Ornithological Society, directing the attention of the Council to the damage caused to farmers and fruit growers by the depredations of certain birds, due in respect of some of the birds to their increased numbers, and of others to their altered habits of feeding. Among the more destructive of the birds enumerated were the rook, starling, ring dove, blackbird, blue tit, bullfinch, and sparrow. The enormous increase in the number of starlings during the last few years had changed the feeding habits of certain birds. For instance, the starling now ate in spring the food which had hitherto formed the main supply for rooks, and the latter, as a consequence, had taken to eating the young green corn. In the interests of farmers and fruit growers the birds must be kept in check, and as a means to that end he suggested the payment of "head money," and the preservation of sparrow hawks.

The Chairman said the letter, which was a most interesting and important one, had only just been received by the Council, and it was proposed to embody its leading points in their answer to a communication from the Board of Agriculture, who, in acknowledging a former resolution passed by the Chamber on the subject, had asked for some indication of the specific points to which the attention of any Committe of Inquiry which might be appointed should be directed.

Cattle Diseases.

The report of the Cattle Diseases Committee submitted by Mr. B. St. John Ackers, and adopted by the meeting, expressed the opinion that greater efforts should be made by the Board of Agriculture to eradicate glanders, and as one means of achieving that end they considered that compensation for the slaughter of suspected animals which, on post-mortem examination, were proved to be diseased, should be increased from one-fourth its value to three-fourths, as in the case of pleuro-pneumonia. The Committee also recorded their entire approval of Mr. Fellowes' action in refusing to admit Canadian store cattle, and trusted the Board's present policy will be continued.

The Agricultural Minister.

As a matter of urgency, the meeting, at the instance of Mr. C. Middleton, adopted a resolution affirming "that it is desirable in the best interests of agriculture that the President of the Board of Agriculture should be a member of the House of Commons, and included in the Cabinet," and it was also agreed that a copy of the resolution be sent to the Prime Minister.

The Law of Trespass.

On the motion of Mr. C. F. Roberts, the following resolution was adopted:—"In the opinion of this Council, it is most urgent that the law of trespass be revised, giving owners and occupiers of agricultural land the sole right to all the products of the soil, both natural and cultivated, and adequate protection of property, stock, and crops."

Mr. Christian said that what was needed was power of conviction without proving damage.

Enforcement of Adulteration Act,

Mr. Latham moved that local authorities should enforce the Acts to prevent adulteration with more zeal, and, failing this, pressure should be brought to bear upon the Board of Agriculture.

Professor Long, who seconded the motion, said little had been done in the matter by local authorities in many parts of the country. He instanced the Lancashire County Council as an admirable exception, and said it would be a benefit to the country if other authorities followed their example. He could give many instances where members of local authorities were themselves sellers of adulterated articles, and influenced the authorities in not carrying out the Act. (Hear, hear, and "Shame.") The little traders who sold the produce of British farmers were being squeezed out of existence by large dealers who dealt in nothing but foreign produce, much of which was adulterated, and never came within the ken of the local inspectors, and who were not only defrauding the buyer, but were ousting the produce of British farms. (Hear, hear.) Unless systematic inspection were adopted, they would have the whole system increasing until there was nothing genuine left but the British farmer himself. (Hear, hear, and laughter.)

Other speakers referred to the inadequacy of the penalties imposed in cases of conviction, and Mr. Brockholes pointed out that the Board of Agriculture have power to put the Act into force where they find the local authorities neglect their duty. The resolution was agreed to.

On the motion of Captain Smith Neil, a resolution was passed expressing agreement with Lord Roberts's address on Imperial defence and national physique most calculated to produce healthy men of strong physique.

By Lupulin.

A Few Statistics.

Figures are proverbially rather dry reading, but they are sometimes necessary, as upon them must be founded calculations from which information may be gained that is useful for our future guidance. This consideration may be accepted as my excuse for giving to my readers some of the points I have extracted from two recent Blue Books referring to our national revenue and the consumption of alcoholic beverages. I have confined my observations to beer, that being the only section which is interesting to hop growers, and although the details given are the most recent obtainable, they are not in all cases actually up to date, but will sufficiently serve to "point the moral and adorn the tale" I desire to emphasise.

Beer-Producing Countries.

The principal of these are Germany, the United Kingdom, the United States of America, which rank in the order named, and coming some distance behind them are Austria, Belgium, France, and Russia. Beer is also produced in our Colonies, and in some other European countries, but the quantity is comparatively unimportant. I have taken them all into account in my totals, but do not refer to them separately. The German Empire produced in 1903 1,516,944,000 gallons, our own country 1,279,367,000, and the United States 1,206,455,000 gallons. These figures will suffice to show the proportions of these most important producers, the next lower dropping considerably, and the several quantities falling rapidly until they reach very small figures.

Progress of the Trade.

In this direction we find the most complete particulars referring to the United Kingdom, where we are faced with undoubted proofs of the decline in the national thirst for beer. The revenue derived from this source in the financial year, 1904-5, was £13,101,459—showing a reduction from the previous year of £359,822, and when it is compared with five years earlier the falling off is no less than £839,077. Since 1901 the brewers' licences, for sale and not for sale, have been reduced in number from 26,091 to 15,241, and the same period the number of licences issued to vendors of intoxicating liquors have been lessened by 8,729. In the year ending March 31, 1900, when we attained the highest record of beer production, the output of our breweries reached 37,153,031 barrels of standard gravity, and during the year ending March 31 last we only produced 34,404,287 barrels, showing a reduction of 2,748,744 barrels. It is, however, a singular fact that while in respect both to output and duty paid, England and Scotland are so much lower, Ireland is exceptional in showing a material increase. Speaking with reference to these changes, the official reporter notices that they "correspond fairly closely with the changes in industrial prosperity," apparently deducing therefrom that a recovery of the previous position is possible. It must not, however, be forgotten that within the period named our population is estimated to have increased by over two millions. It therefore appears that we must find other causes for the alteration in the habits of the people. I do not think it would be difficult to find a further explanation, but this is hardly the place to speculate. I confine myself to the recital of facts. These are singularly confirmed in almost all other beer-consuming countries, as, with the exception of Belgium and the U.S.A. a reduction both in production and consumption is evident, though perhaps not to the same extent as in this country.

Standard and Liquid Barrels.

The beer duty in England is paid per barrel of 36 gallons of the standard gravity of 1,055 deg., and upon this basis all the official returns are based, but the beer actually consumed by the bulk of the public does not come up to this standard. In England 29,385,206 barrels of standard gravity are represented by 30,594,189 liquid or bulk barrels, and in Scotland the bulk is in the same way increased from 1,815,109 to 2,021,374 barrels. But Irish brewers apparently deliver their products to the consumer at higher strength than the standard, as 3,205,970 barrels,, as tested by the legal unti, only came out in bulk 2,799,960 barrels. There is, however, a slight discrepancy in the bulk figures, as it is noted in the returns that they do not include the quantities produced by brewers not for sale.

Consumption per Head of Population.

If any further evidence is required that we, as a nation, are drinking less beer than formerly, it will be found in this detail. In 1894 the average consumption stood at a little over 29 gallons, from this point it gradually increased to over 32½ gallons in 1899, from which year a steady reduction has taken place, and we have now arrived at the average of under 28½ gallons, representing a decrease of over 11 per cent.. This speaks plainly in favour of the improving soberity of our people, and when taken in connection with the reduction in the potency of the beer, previously referred to, is, methinks, a decided mark of progress. For the sake of comparison, I give a few of the average consumptions of other countries. The highest is Bavaria, where the latest returns give 51 gallons per head, this being, however, some 3 to 4 gallons less than four years earlier. Belgium comes next with about 48 gallons, having increased by 10 gallons since 1889. Wurtembergers consume 37 gallons, the Baden folk 34 gallons, but the average throughout the German Empire does not exceed 26 gallons, this being substantially lower than it was. Denmark is the next best patron of beer to the extent of 20 gallons, Austria and the United States take only 15, Switzerland and Sweden about 13, and the consumption of other countries is comparatively insignificant. Amongst our Colonies, West Australia most nearly approaches the Mother Country, with about 25 gallons, the others varying from 5 to 10 gallons.

The World's Consumption.

This is a rather difficult decision to arrive at, and must be more or less speculative, and at best, can only be approximate. But the figures before me enable me to present what may be accepted as a fair conclusion. It is important, as affecting the question I have principally in view. The consumption of hops depends upon the consumption of beer, and as the whole world is, for the purposes of commerce, but as one vast country, it behoves our native planters to contemplate the whole when they desire guidance for their own action. With some labour, and as much care as possible, I have arrived at this result, that the production of beer in the various countries of the world may be expressed approximately as 175,500,000 barrels of 36 gallons each. The amount of hops used per barrel varies from ¾ lb. to 2 or 2½ lb. As nearly as I can gather, the larger proportion of the beer is brewed with an average of 1 lb. per barrel, and taking this quantity as a basis, the calculation comes out that the world requires annually about 1,600,000 cwt. of hops. If, however, we take a more liberal estimate, and give 1¼ lb. per barrel, the annual consumption of hops would rise to nearly 2,000,000 cwt. This latter is the figure usually accepted, and probably is not far from correct, if we take into account the other purposes for which hops are used.

My object in collecting these details is achieved if I have succeeded in arousing some interest in the subject, which is all-important to our hop industry. I do not claim absolute exactitude in my statements or deductions, but I trust I may be allowed to ask for indulgence on the ground that I sincerely desire to put before my friends such information as may be of some service to them.

PUBLICATIONS RECEIVED

Mr. George Thursby, who rides on equal terms with jockeys, is the subject of the second of the series of articles on "Sportsmen of Mark" in the December number of the "Badminton Magazine of Sports and Pastimes." A valuable article on "The Importance of Leaving a Good Breeding Stock" will specially commend itself to all owners of shooting estates. Miss Lilian E. Bland contributes "A School Across Country," illustrated by some of her remarkable photographs. In "Some Ladies who Ride to Hounds" there are many portraits of the most notable horsewomen in the country. The series of "Royal Homes of Sport in Germany" is concluded by a description of "Rominton." This series has been written specially for the "Badminton Magazine" by the gracious permission of His Imperial Majesty the German Emperor. "Some Motor Problems" are discussed by Major C. G. Matson, and an amusing story, "The Backney Hunt Poultry Fund," is the ninth "Strange Story of Sport." The monthly notes on "Bridge," "Books," and a splendid selection of photographs in the Prize Competition complete a good number. On the cover is an excellent reproduction of the race for the Ladies' Plate in the Bath and County Harriers' point to point.

The Royal Show.

Sir,—I had not intended to trespass on your valuable space by answering correspondents, some of whom are trying to poison the minds of the public against the much-needed reforms that have been determined upon by the Council of the Royal Agricultural Society. It has been very noticeable how the new council has refrained from criticising—either at their meetings, or in the Press—the best policy of the Society, which, although resulted in failure, was, without doubt, entered upon with the best intentions.

Now, when such a letter appears as that under the signature of Sir R. Green-Price, following, amongst others, in the same key that of another venerable baronet, I think it is only fair to call the attention of your readers to the systematic "crabbing" that is being indulged in. Sir Richard can have no grounds for his virulent attack on Mr. Cooper, who as so magnanimously come forward to our assistance in the hour of need. No one can find fault with his challenge to Sir Walter Gilbey; he is only backing his own opinion, and asking Sir Walter if he is prepared to do the same. Sir Rchard goes on to say that Sir Walter has paid out of his own pocket a sum of £50,000 to the R.A.S.E. I have always understood that money have never been accepted by the Society from any private individual, except in the case of the purchase of Harewood House and Park Royal, and the special prize fund of about £10,-00q for the 1905 show. If Sir Richard's statement is a fact, it comes as an "eye-opener" (vide Sir R. Green-Price) to most of us, and it will be necessary to hold a strict investigation in order to discover what has become of the money.

As regards the permanent —v— the migratory show system—a matter in which the worthy baronets seem singularly in accord—I would point out that the total loss to the society in the period of the ten years of the migratory shows (1893-1902) quoted by Sir Walter, was the small sum of £488, while the loss on the three shows held at Park Royal was £23,590, the attendance of the paying public dwindling from 63,012 in 1902, to 23,975 in 1904, the smallest "gate" for about half a century.

In the face of these figures, who could, in their sober senses, advocate another show at Park Royal?

It has been thought by some that it would be well for the society to keep Park Royal simply as a land investment. This may be so; but how, in view of our present financial difficulties, do they propose to raise an annual amount of £1,500 to £1,700, which Sir Ernest Clarke estimates will be necessary if we continue to hold the property until 1911, the date of the expiration of Messrs. Lambert's pre-emption rights?

Why Sir Richard demands another census of the members of the R.A.S.E., I cannot imagine. Within the last few months by the election of the present council, they have spoken with no uncertain voice. The policy of the new council and Mr. Cooper's generous offer, have now been for some time before the public. Why does Sir Richard so suddenly take up the cudgels? Has he only just heard about it, or is it the effect of his recent visit to a southern seaside resort. On carefully perusing his letter again, the conviction is borne in upon me that although the hand is the hand of Esau, the voice is Jacob's voice.—Yours faithfully,

Walton Hall, Warrington. GILBERT GREENALL.

Mr. Clement's Weather Forecas for November.

To the Editor of THE MARK LANE EXPRESS.

Sir,—Mr. Clements was right in his general prediction as to the character of the weather of November, which, as he predicted, has proved a very rainy month. It is not surprising, however, that in attempting to forecast the weather of individual days, he proved wrong in many instances. I give below his several forecasts for London in detail, and the actual facts, taking the records of the Meteorological Office for the rainfall up to 6 p.m. at Brixton:—

FORECASTS.

Rain on 22 days.

Eight days without rain, on the 4th, 10th, 12th, 19th, 20th, 24th, 25th, and 26th.
Heavy rains on 5th, 13th, 14th, and 27th.
Not so heavy on 3rd, 7th, 25th (given above as rainless) and 30th.
Unsettled and rainy, particularly round the 2nd, 8th, 14th, to 18th, round the 22nd, and after the 27th.
Windy on the 6th, 18th, 23rd, and 27th.

FACTS.

Rain on 19 days.
Rain on 4th, 10th, 12th, and 26th. None on 19th, 20th, 24th, and 25th. Half right and half wrong.
On 5th 0.25 in., 13th 0.26 in., 14th 0.03 in., 27th 0.19 in. None of these falls were particularly heavy.
On 3rd 0.37, 7th none, 25th none, 30th 0.08 in. The fall on the 3rd was heavier than on any other day up to 6 p.m.
Rain on the 2nd, none on the 7th, 8th, and 9th, only 0.03 in. on the 14th, 0.12 in. on the 15th, none from the 16th to the 18th inclusive, none on the 22nd, and only 0.04 to 0.08 in. after the 27th. The correspondence with the forecast not at all close.
Wind very slight on 6th, gale in the nights of 18th and 23rd, and a strong wind on 27th. Forecasts remarkably accurate in this set.

WEATHER OBSERVER.

Agricultural Prospects in the East Riding of Yorks.

SIR,—As regards the agricultural prospects in this district, things are looking fairly well. Wheat has come up thick, and is looking promising. Turnips in some places are thin, and are going fast. Swedes and mangolds are better than the white-fleshed turnips; indeed, some mangolds are very good. Clovers vary very much—in some places they are good, being well set in, others thin and poor. T. B.

December 8, 1905.

Stock Prospects in the North Riding.

SIR,—This district is exclusively a breeding one, and had it not been that lambs sold well our farms would have been in rather a tight corner. The hay crop was not more than one-half of an average one, and many farms have had to sell more stock than usual. This will mean having to purchase again in the spring. The turnip crop, except in a very few cases, was almost an absolute failure.

A good clearance of bullocks was made in the first week in November, when special trainloads were sent into Norfolk for feeding, although the price was anything but satisfactory, many beasts paying nothing for summer keep. The weather up to now has been open, and cattle are still running out on the land, thus somewhat saving the hay. There has been a good demand for Wensleydale cheeses at a paying price. J. E. R.

December 8, 1905.

Rural Education in Hampshire.

SIR,—The season since harvest has been one admirably suited to the preparation of the land for autumn crops, which have gone on well, but have been somewhat tardy in growth. The season has also suited the cultivation of the stubbles, which are in a very forward state. Both sheep and cattle are very healthy, and have done well, but prices of beef have been bad for nearly three months, and feeding stuffs comparatively very dear—singularly enough with hay and straw very cheap.

With the gross returns of produce totalling a very moderate, I might truthfully say a small, sum, it is scarcely to be wondered at that, with labour some 20 per cent. dearer than before the Boer war, and the quality of it very indifferent, added to that higher rates and taxes, and the fact that we are educating the children for other purposes than agriculture—at least it appears to be so, as on 1,200 odd acres of land, I have not a boy under eighteen years of age, and others tell me the same, whilst I see numbers of boys from thirteen to sixteen loafing about the greater part of their time, but occasionally employed as golf caddies, which occupation the police and others who come into their contact say leads them to occupy their spare time (and they have plenty of it) in gambling, drinking, etc., the probable outcome of which will be a swelling of the number of the unemployed and unemployable within a few years, and I am also afraid it may increase the work of the magistrates and judges, as also our rates.

It was with great satisfaction that we heard the Central Chamber of Agriculture are making a representation to Parliament calling on them to alter the law of trespass so that everything on or arising from the land should be recognised as the occupier's property, including mushrooms, regarding which latter it seems very doubtful if the learned judge who ruled that they were natural or spontaneous growth was quite right, as I cannot recollect ever seeing them growing except where manure from horses or farm animals has been deposited, and an act of manurance appeals to most agriculturists' minds as an act of husbandry. E. E.

December 8, 1905.

West Suffolk.

SIR,—With fair open weather up to the present time farming operations have been steadily going on, and men generally employed and few out of work.

The barley crop is principally threshed, and some farmers are turning their attention to the drawing of seed.

Wheat appears to be the crop of the year, as far as quantity is concerned, but the price is not very satisfactory, that given by millers not being equal to the price of foreign wheat.

A good crop of mangolds is the rule in this district; but turnips for folding off with sheep on the land are a very indifferent and partial crop. J. J.

December 8, 1905.

The Autumn in Hampshire.

We have had altogether a favourable autumn. October was a very dry month, and colder than usual, with several severe frosts. November was wet and foggy. The early sown wheat is come up and looking fairly well. Some was put in very dry. On some farms the root-crops are good, on others almost a failure.

Cattle are doing well, although grass is not so plentiful as usual, young stores sell very badly. Sheep are generally healthy, and store lambs very dear. I cannot see anything at all bright in the outlook for farmers. Most of the produce is selling at a low price, especially hay and straw, and rates are going up. I. P. C.

December 8, 1905.

Season in Sussex.

The season during the summer was very dry and warm, and good for cleaning the land, but too dry for the turnip seed to braird in many instances, and consequently the root crop is very disappointing on many farms. Some farms, and one joining this place, has a very good crop of both swedes, turnips, and mangolds. But that is an exception. I have a very poor one. Grass was short all summer.

The corn crops got a blight on them before they got filled; what I term rust. When walking through the cornfields before harvest your boots got quite yellow, and the reaper when cutting the corn was covered with it. The corn in that case never filled properly, and ripened too soon. Some is not worth thrashing. I saw some with a neighbour after it was thrashed, not good tailing, and that was from seed got from Dumfries-shire. The machineman told me he had thrashed some oats near to Petworth that has been put through the winning machine six times and not good corn now. I have not thrashed any myself yet, but expect it better than that. The wheat is the crop of the season—good all through. Potatoes not much grown in this district, and in some places a lot of disease. One man told me he had four bushels bad out of six. Some are very good. One lot of mindyfold weighed 20 tons 4¾ cwt. and 12 lb. to the acre. We got one potato 2lb. and one 1¾ lb.

Sheep are paying their way much better than cattle. Some cattle will not pay a cent. for summering. I saw several lots of store cattle put through the auction ring to-day at Chichester without ever a bid for them; could not get inlaid price for them; and at Barnham market, on Monday, several fat bullocks went home unsold. I consider it a very poor year for farmers, especially for those who made a fresh start in a new farm like myself. My nearest neighbour is a new man here from Scotland this year. He bought his cattle in May. He is trying to feed some of them; they won't pay for their cake. His store cattle are not worth the money he gave for them in May. Rent and taxes must be all paid out of pocket this year by a good many farmers. JOHN CAMPBELL.

December 8, 1905.

Farming in the Isle of Wight.

On the whole the weather since harvest has been favourable for farming operations. The thrashing of barley is pretty well over; samples are not very bright, but good samples have weighed from 56lb. to 58lb. per bushel. These were sown in February. The later sown ripened too quickly. Prices have ranged from 28s. to 35s. Yield not good. Oats thin, and poor yield. Wheat good generally.

Prices for sheep at the famous Michaelmas sales were very good, the well-known Kingston-Dorset horn flock averaging 70s. per head for the whole flock, including ewe tegs. Horses were not so dear as last year, and dairy stock about the same. We are now in the middle of the combing season. So far as I hear there is a fairly good crop. Not so many twins as usual. Weather rather too wet.

Mangolds just done storing, which will seem late to the mainland farmers. We seldom get any frost to hurt until after Christmas. Those we do not cart off the land are either heaped or ploughed in—one drill left standing, and one either side pulled and placed in the standing drill—then ploughed in, a turn on either side, and afterwards any that may be exposed are covered with a spade. In the spring these are cross-dragged and fed on the land—quite the cheapest way of preserving that I have found.

I would suggest that all interested in the land, should see that their representatives in the new Parliament do something to relieve the heavy taxation that land has to bear so unjustly, e.g., on a rental of £400 I am paying over £50, double what it was before the Agricultural Rate Act.

December 8, 1905. H. W.

The Season in North Westmoreland

SIR,—We are already close upon the great festival season which in times past was looked forward to with keen interest and great preparations made nearly in every household for entertainments and games of various descriptions to entertain both old and young according to their age and tastes. It is still looked forward more or less as a holiday when kindly acts and feelings are frequently exchanged, but it reminds us also that we are nearing the end of another year, when a general overhauling of financial matters takes place to see how the balances stand in the various branches of business, though, perhaps, least so among the farming community considering the turn over which annually takes place.

I am quite sure the agriculturists of North Westmoreland have nothing to boast of, except the valley and hill farmers, whose products consists wholly or largely of sheep, wool, and dairy produce, all of which have been making all-round good and improved forms. With this class is must have proved quite a record year, but it is quite the reverse with the inland and arable farmers, for, although mutton, wool and lamb have all been making good prices, much of it has been reinvested in store and feeding, and breeding sheep, while beef and store cattle have been difficult to dispose of and at most disappointing prices, large quantities loosing their summer's grazing and cash in addition. The cold wet late spring has a good deal to answer for with cultivated farms, especially strong land, especially as it was succeeded by a hot-aired summer. Days followed with cold mornings and nights; the result was a serious deficiency in the hay crop bulking less than half an average.

The corn crop has also bulked badly, hence a hard and long winter is seriously dreaded, but we sincerely hope we may be spared the infliction. Potatoes are proving an abundant crop, and green crops of all descriptions have developed amasingly during the genial mild weather which still prevails, though it keeps slightly on the wet side. In many cases the turnip crop has doubled since the middle of September.

But the air almost rings with complaints of the wasteful extravagance of the various public bodies who are now entrusted with the expenditure of local rates which are pitied upon us without mercy or reason, bringing no return either present or prospective, and will continue to do so until some radical change is effected which will, in the first place, spread the liability to pay more over the wealth of the country which shares in all the advantage which this extravagance produces. Secondly, to return the control of local administration to practical men on smaller areas who must earn ther ates before they can pay them and remove it from the county councils, who are largely composed of gentlemen of ample means and leisure, to whom time and expenses are of little consequence, and who rarely undertake any duties of a similar character without consulting some expert or practical man to adverse and direct them, but, strange to say, regard themselves as the best qualified to spend the money of others economically and wisely.

December 7, 1905. T. B.

Mr. Ailwyn Fellowes, President of the Board of Agriculture, has written to Sir John Kennaway, M.P., expressing his willingness to address a meeting of the leading agriculturists of Devonshire irrespective of party at Exeter, on January 12.

CORN MARKETS.

LONDON.

Mark Lane, Wednesday.—Usual mid-week attendance, and firm tone generally, but business was restricted in all departments. Foreign wheat ruled firm, with American occasionally harder to buy; No. 1 Northern Manitoba ex ship held for 34s 6d. Maize quiet at fully last rates; La Plata landed is quoted at 24s 9d, while 25s 3d ex ship is wanted for mixed American new crop. Flour dull but unchanged: Iron Duke offered at 22s 6d. Barley quietly steady at 20s 3d for Odessa Nicolaieff. Oats firm and rather dearer; 38lb. Russian are obtainable at 17s to 17s 6d.

Mark Lane, Friday.—Thin attendance, and while a firm tone prevailed generally, the amount of business done was small. English wheats steady, while foreign ruled firm, with an occasional advance asked; No. 1 Northern Manitoba ex ship quoted at 34s 6d to 34s 9d, and No. 2 at 34s 3d. Maize quiet and unchanged; mixed American ex ship offered at 25s 3d, new crop and La Plata landed at 24s 9d. Flour steadily held; Iron Duke obtainable at 22s 6d and Hungarian at 32s. Barley meets a poor demand at last rates; Odessa Nicolaieff ex quay offered at 20s 3d and ex ship at 19s 6d to 19s 9d; for Persian 19s is wanted and 19s 6d for American ex quay. Oats firm and rather dearer, 38lb. Russian held for 17s 6d to 17s 9d.

COUNTRY.

Ashford, Tuesday.—Wheat trade quiet at late rates, 28s to 30s; English malting barley 1s dearer, at 28s to 31s; English oats 6d to 1s dearer, making 18s to 21s 6d; peas, 29s to 30s; foreign grinding barley, 23s to 24s; Mazagan beans, 28s; tick beans, 31s to 32s; maize, 27s to 28s per quarter. Flour: Whites, 31s; seconds, 28s; sealing, 26s per sack.

Banbury, Thursday.—Wheat, red (new), 28s to 29s 6d; barley, 24s to 30s; beans (new), 29s to 31s; ditto (old), 33s to 35s; oats, 17s to 22s; ditto (old), 20s to 24s; peas, 27s to 30s—per quarter.

Berwick, Saturday.—Fair attendance, with average supplies of grain. Barley met a firm trade at late rates. Oats unchanged. Barley 24s 6d to 28s 6d; oats, 18s to 21s.

Birmingham, Thursday. English wheats made up to about 30s per quarter (496lb) delivered Birmingham. Grinding barley unchanged at 20s 6d per 400lb at Sharpness. English oats, 18s 6d to 19s per 312lb; and beans, 12s 3d to 12s 6d per bag (196lb) delivered Birmingham.

Brighton, Thursday.—Wheat in short supply, prices unaltered; trade dull. Small attendance and little business. Barley, 28s to 33s; grinding ditto, 22s to 23s; oats, English, 18s to 21s; rye, 24s to 25s; peas, 28s to 30s; beans, 31s to 33s. Oats 1s dearer. Barley firm.

Bristol, Thursday.—English wheat in moderate supply, making last week's full rates. Foreign very firm, with a slight advance in some descriptions. Maize 3d dearer. Barley unchanged. Oats the turn in sellers' favour. Flour unaltered in value, but little doing at present. — GRACE BROTHERS.

Bury St. Edmund's, Wednesday.—Rather a moderate attendance for the time of year, and generally a quiet market. Wheats, in variable condition, were firm for fine dry samples, at 29s to 31s per quarter. Inferior samples difficult to sell. Few good samples of finest malting barley were offering, the trade for which was unaltered. Good mediums sold readily at late rates of 29s to 31s. Feeding qualities firm. Oats firm, 19s to 20s per quarter. Beans, 32s to 33s; peas, 30s to 32s.

Cambridge, Saturday.—Wheat made last week's rates; reds, 29s to 31s; and white up to 31s per 504lb. at mills. Barley was not in large supply, and, with a good demand, prices ruled very firm. Beans were mostly lacking in condition, and a dull trade. Oats 6d dearer.

Chester, Saturday.—Wheat and oats firm at last week's prices, with few samples offering. Indian corn was the turn easier. Quotations:—Wheat, white and red, 4s 3d to 4s 6d per 75lb.; barley, grinding, 3s to 3s 2d per 64lb.; beans, old, 5s 9d to 6s per 80lb.; oats, new, 2s 3d to 2s 7d; ditto old, 3s 3d to 3s 6d per 46lb.; Indian corn, 13s to 13s 3d per 240lb.; River Plate, new, 12s 9d to 13s per 240lb.

Canterbury, Saturday.—Trade generally rather better, prices for nearly everything showing a slight increase. Wheat sold from 29s to 32s per qr; barley, from 28s to 32s for malting samples, and for grinding qualities from 23s to 25s per qr.; oats firm, from 18s to 23s per qr.

Chichester, Wednesday.—Good attendance, very fair trade, with oats, beans, and peas 1s dearer than last week. New white wheat, 30s to 31s; new red ditto, 30s to 31s; barley, 28s to 33s; grinding ditto, 21s; oats (English), 15s to 22s; peas, 30s to 31s; beans, 32s to 34s; maize, 26s to 26s; flour, 25s to 27s.

Colchester, Saturday.—Wheat was in moderate supply and sold at prices barely equal to last week. Many sample were affected by the damp weather. Barley was not freely offered, but was sold at late rates. Beans and oats unchanged.—JOSEPH WILES AND SON, LTD.

Coventry, Friday.—Attendance was not large; fair supply of wheat, for which trade was quiet at late rates. Oats and beans made as much as last week. Quotations:—Old wheat, 11s to 11s 6d; new wheat, 10s 3d to 10s 9d per 196lb.; barley, 27s to 32s per 448lb.; old oats, 23s to 25s; new oats, 19s to 22s per 352lb.; old beans, 12s 6d to 13s; new beans, 11s 9d to 12s 6d; peas, 11s 6d to 14s per 196lb.

Derby, Friday.—Wheat unchanged from last week. Spring corn firm at late rates. White wheat, 30s to 31s; red, 29s to 30s; malting barley, 26s to 28s; old beans, 34s to 36s; new, 33s to 34s; old oats, 23s to 24s; new, 19s to 20s.

Devizes, Thursday.—There was a small supply of corn. Prices were firm, with no quotable alteration from last week. Quotations:—New wheat, 14s 6d to 16s; second ays, 13s to 14s; best barley, 26s to 32s; secondary, 20s to 24s; rye, 22s to 24s; old black oats, 20s to 23s; new ditto, 16s 6d to 19s; malting barley, 26s to 32s; beans, 16s to 18s; fine flour, 24s to 26s; extra fine, 27s to 30s.

Doncaster, Saturday.—Average attendance. Small supply of English wheat, and prices very firm. Steady demand for foreign wheat. Fine barley met with a ready sale, but secondary kinds neglected. Grinding barley and maize met with a fair demand, and were slightly dearer.

Dorchester, Saturday.—Only very small attendance, and not much business passing, the offer being limited. Owing to the wet weather throughout the week, which caused pressing operations, whilst many were absent at the Christmas fat stock sale at the cattle market, where there was a grand display of stock. Prices generally showed quite as much for wheat, but also for all other kinds. Fat wheat sales took place were practically on last week's rates, there being nothing that really calls for comment. Prices:—

Dublin, Friday.—Wheat, 17s 6d to 19s; malting barley, 18s 6d to 19s 3d; grinding ditto, 14s 9d to 14s; oats, 11s to 13s 3d; oatmeal, extra pinhead, 14s 6d to 14s 6d; flour, 11s to 14s 6d; pollard and bran, 6s to 6s 6d.

Glasgow, Wednesday.—There was the usual attendance at our Corn Exchange to-day. Wheat and flour quiet, and unchanged on the week. Maize a slow sale and unchanged. Corn 6d per boll cheaper since Wednesday owing to fresh arrivals. Barley nominally unaltered. Foreign oats the turn dearer, but Scotch unchanged. Beans 3d per boll dearer on the week. Pease very firm, but practically unchanged. Oatmeal quiet, and meets with a slow sale. Bran and thirds in good demand and unchanged.—GIBSON AND CLARK.

Glasgow, Friday.—Wheat steady in price, but inquiry small. Flour unchanged, with very little trade passing. Foreign oats have a firmer tendency, with little actual business, however, passing. Home oats favour buyers.

Gloucester, Saturday.—English wheat was in fair supply, and values unchanged. Foreign a dull trade, but occasionally 3d. dearer. Maize, barley, and oats firm and unchanged.—WAIT, JAMES AND CO.

Grantham, Saturday.—Average attendance of farmers and dealers, and a fair business. Wheat in small supply, and last week's prices (28s 6d to 30s per qr.) maintained. A slow trade in barley at 25s to 32s per qr. Beans unchanged. Blue peas, 35s to 40s. Oats, 18s to 21s per qr.

Ipswich, Tuesday.—Wheat in rather short supply. No particular change, but samples were in some cases making a little less money on account of condition being not all that could be desired. Reds or whites, 30s 6d to 31s per quarter, delivered at Ipswich. Barley, with only a moderate supply, was a steady trade at 28s to 32s per quarter for malting samples; grinding sorts firm, at 24s 6d to 25s 6d per quarter. Oats the turn dearer on the week. Beans very firm, at 32s to 33s per quarter. Maize unchanged. Maize germ meal, £6 to £6 2s 6d per ton.

Leeds, Tuesday.—Trade has ruled quiet during the past week, but notwithstanding the heavy shipments advised this morning the tone is decidedly more confident owing to the general consumption of wheat proving far larger than anticipated. Prices show no alteration, holders being indifferent sellers. English in reduced supply. Malting barley meets a slow sale at late rates. Maize rather easier. Beans and oats unchanged. DUNNS AND CO.

Leeds, Friday.—Both English and foreign wheats were slightly easier than on Tuesday, with a slow demand. Maize was also in buyers' favour. Peas fully maintained the late advance of 6d, but there was no change in beans, oats, barley, or flour.

Lincoln, Friday.—Fair attendance and moderate show of English wheat, which sold freely at last week's full prices. Oats and barley quiet at unchanged rates. Beans firm at the full prices of a week ago.

Leicester, Saturday.—Good attendance of buyers and dealers with full supplies of home-grown wheats. Trade steady at firm rates. Red wheats, 29s to 31s per 36 stones; white wheat, 30s to 32s per 35 stones. Barley of good quality in better demand at 25s to 28s per 32 stones; beans, 32s to 34s per 38 stones; fine oats, 20s to 23s per 26 stones.

Manchester, Thursday.—English wheat unchanged; foreign, ½d per cental dearer, and firm. Flour slow at unchanged rates. Indian corn easier, and turn in sellers' favour. New English oats easier. Barley, peas, and beans unchanged. English peas met with a fair inquiry. Bran and thirds firm and unchanged.

Newark, Wednesday.—Wheat a firm trade at last week's prices. Barley repeated previous values. Oats and beans unchanged. Quotations:—Wheat, 28s to 30s; barley, 24s to 30s; oats, 18s to 20s; beans, 30s to 32s per quarter.

Newcastle-on-Tyne, Saturday.—A slow demand for wheat of all descriptions prevailed at our to-day's market at last week's quotations. Maize steady and unchanged in values. The demand for peas and beans was fairly steady and prices in the favour of sellers. A slow demand for barley and prices favouring buyers. A steady demand for oats at unchanged prices.—JOSEPH POLLARD AND CO.

Northampton, Saturday.—Larger attendance, but small supply, wheat prices being firm, and practically unchanged; new wheat, 27s 6d to 29s; malting barley, 25s to 32s. new white oats, 19s to 20s; new black oats, 18s to 19s. new beans, 28s to 30s; peas 27s to 28s; flour, 24s 6d to 28s 6d.

Norwich, Saturday.—There is no quotable alteration in the wheat trade at our market to-day, the supply being small, with a firm trade. Rather more barley offering, which met buyers at late rates. Damp, but milder weather has prevailed during the past week. Wheat, red, 30s to 31s per qr., weight 63lb. per imperial bushel. Corn inspector's return for the week ending November 18, 1905:—Wheat, 2,788, 28s 7d; barley, 19,188, 24s 5½d.—J. ARTHUR MILLS.

Nottingham, Saturday.—Less wheat offering, mostly out of condition; dry lots sold at full rates. Barley small supply; values unchanged. Oats and beans sparingly represented; prices in sellers' favour.—ROBT. HUBBLE.

Oxford, Saturday.—Attendance moderate, but trade dull at easier rates. Home-grown wheat met a poor demand, and holders were easier to deal with. Feeding stuffs moved slowly.

Peterborough, Saturday.—Not much wheat offering, but the demand was not brisk and prices remain as last week. Barley in short supply and fully as dear. Oats firm and the turn in sellers' favour.—THOMAS HILL AND SON.

Plymouth, Tuesday.—There was only a fair attendance on our market to-day; business was not very brisk. Wheat was steady. Maize a turn cheaper. Oats and barley unaltered on the week.—ORLANDO DAVIS AND CO.

Preston, Saturday.—Today's market was similar to that of the last few weeks. Farmers' grain made the full prices of last Saturday. Flour unaltered. Wheat, white, new, per windle of 220lb., 13s to 13s 6d; ditto red, 12s 9d to 13s; oats, new, white, per bushel, 2s 9d to 2s 10d; beans, per windle, 16s to 16s 6d.

Reading, Saturday.—Average attendance, but trade was by no means brisk, at the appended prices: Wheat, 28s to 32s; oats, 16s to 22s; barley, 25s to 30s; beans, 30s to 34s; peas, 28s to 31s.

Retford, Saturday.—Not a very large attendance, and a moderate supply of grain. No change in the wheat trade. Business was transacted on a limited scale at 28s to 30s per qr. Ordinary barley found buyers without much difficulty at 26s to 28s; inferior down to 25s; grinding, 24s 6d; maize, 26s 6d; beans, 31s to 32s; oats, 17s 6d to 20s; and rye, 21s per qr.

Ripon, Thursday.—Round maize dull, and to do business less money had to be taken. Prices: New wheat, 28s to 29s 6d; foreign ditto, 33s to 36s 6d; grinding barley, 23s to 24s; malting ditto, 25s to 28s; new oats, 18s to 20s; round maize, 25s 6d to 26s; flat ditto, 25s 6d to 26s 6d per quarter.

Stamford, Friday.—Attendance was not quite so good as last week, and only a medium trade was done. Best wheat, 29s to 29s 6d; oats, 18s to 18s; malting barleys, 29s to 31s; grinding, 23s to 25s; peas, 39s to 42s; beans, 30s to 32s 6d per qr.

Sunderland, Saturday.—Little grain on offer; wheat steady at late rates. Barley quiet. Oats firm. Arrivals, coastwise, wheat 1,075 qrs.; foreign nil. — E. AND F. RICHARDSON.

Tunbridge Wells, Friday.—New white wheat, 32s 6d to 33s; new red ditto, 31s 6d to 32s; barley, 26s to 34s; grinding ditto, 21s to 24s; oats, English, 17s 6d to 20s; rye, 25s to 26s; peas, 33s to 3—s; beans, 32s to 36s; tares, 42s to 56s; maize, 29s to 30s.

Warwick, Saturday.—Very small supply of wheat, which makes the full prices of last week. Barley very scarce; best samples wanted, and make rather more money. Oats and beans rather dearer. Feeding stuffs unchanged.

Winchester, Saturday.—English wheat a shade dearer on the week, short supply; foreign firm, unchanged. Barley and maize unaltered. Oats 3r advance. Flour fair consumptive demand, at late rates.—FEAR, COLEBROOK AND CO., LTD.

Wolverhampton, Wednesday.—Fair attendance, but little demand. Quotations:—Barley, 28s to 31s per 448lb; oats, new, 12s 6d to 13s; old, 16s 6d per 196lb; beans, 13s to 15s 6d per 196lb.

Worksop, Wednesday.—Small attendance and moderate show of grain. White wheat, 28s to 30s; red wheat, 26s 6d to 28s; best malting barley, 28s to 30s; secondary, 26s 6d to 28s; grinding barley, 22s to 24s; white oats, 17s 6d to 19s; black oats, 16s to 17s; maize, 25s to 27s per quarter.

Yeovil, Friday.—Foreign wheat realised 3d per qr. more money, and maize favoured sellers. Best quality English wheat made from 30s 6d to 31s; secondary, 28s to 29s 6d; maize, 24s to 25s 6d; malting barley, 31s to 34s 6d; feeding barley, 21s 6d to 23s; rye, 22s to 23s 6d; beans, 32s 6d to 37s 6d; oats, black, 17s 9d to 20s 3d; white, 17s 3d to 20s 6d; Irish black, 17s to 17s 9d; rape, 46s to 48s 6d; vetches, 6s to 7s per bushel. Flour a slow trade without much change in value, first making from 24s 6d to 25s per sack, and extra fine 25s 6d to 27s.

York, Saturday.—A fair attendance, and a moderate supply of wheat; fine white made 30s to 31s, and red and mixed, 29s to 3—s per qr. of 36 stones. A small supply of barley in variable quality; fine sold at 27s to 29s; good, 25s to 27s; and ordinary, 23s to 25s per qr. of 32 stones. Oats were in fair supply, and made slightly less money, white Tartary fetching 17s to 17s 9d; black, 18s to 19s; and white Garton, 19s to 20s per qr. of 24 stones. Rye, 22s 6d to 23s; and beans, 30s to 33s per qr. of 36 stones.

FOREIGN.

Hamburg, Saturday.—The animating reports from foreign markets had not much effect here; wheat and rye were in better supply, and last week's prices were barely supported. Feeding stuffs continue in fair demand, particularly parcels near at hand. Fine Holstein and Mecklenburg wheat is offering at 32s 6d to 33s per 504lb.; American Hard Winter No. 2, at 31s 9d; 80 kg River Plate Russo, at 32s to 32s 3d; 75 kg. Rosafé, at 30s 9d to 31s per 480lb. c.i.f. Hamburg; 72-73 ko. Danubian rye has been sold at 27s 3d; 9 20-25 Odessa offeat is offering at 28s per 480lb. c.i.f. Danish malting barley is selling at 3s to 32s; Oderbruch and Silesian is held at 29s to 31s 6d; Bohemian and Slovakian to arrive per barge at 34s 6d to 38s per 448lb. Feeding barley in good demand; 60-61 ko South Russian is selling at 19s 6d; American at 18s 9d per 400lb., c.i.f. Hamburg. American white clipped oats are in demand at 17s 3d per 320lb. c.i.f. Hamburg. Mixed American maize on the spot is selling at 22s 9d; Jan.-Feb. at 21s 9d; River Plate due, 24s; May-June, 21s. 3d. per 480lb. c.i.f. Hamburg.—JOHN TATLOCK.

THE BALTIC.

The London Corn Trade Association have made up standards of choice white Kurrachee, Soft Red Kurrachee, and Choice White Bombay wheat, of White and Green Calcutta peas, of Bombay and Calcutta linseed, and of Calcutta grain. These samples can be inspected at 26, St. Mary Axe, and specimen samples purchased.

The Association prices for arrived cargoes are 33s. 9d. per 492 lb. for White (Club) Calcutta wheat, 31s. 9d. for Soft Red Calcutta wheat, and 33s. for Choice White Kurrachee wheat. No Bombay or Delhi cargoes are on offer.

Cargoes arrived on sale last week were:—

Wheat 1: from Australia:
Maize 2: from Argentina.
Barley 1: from Chili.

The maize and barley cargoes were bought for Antwerp, Hamburg, and Ipswich; while the wheat cargo is still on sale.

Total arrivals January 1-December 9 thus compare:—

	1905.	1904.
Wheat	303	282
Flour	3	—
Barley	24	56
Maize	14	13
Linseed	54	43

These arrivals on sale indicate roughly the degree of speculative business. Most cargoes are bought for shipment or on passage, and arrive to the order of the buyer.

Cargo sales during the past six days have included the following:—Wheat.—Blue Stem, 32s. 9d. per 500 lb.; Walla Walla, 32s. 6d. per 500 lb.; Red Walla, 31s. 6d. per 500 lb.; Rosario, 32s. per 480 lb.; Kustendje, 32s. 3d. per 492 lb.; Odessa Ghuka, 33s. per 492 lb.; and No. 1 Manitoba, 32s. 9d. per 480 lb. Maize.—Argentine, 23s. 6d. per 480 lb.; and American, 21s. 3d. per 480 lb. Barley.—Kustendje, 20s. 6d. per 416 lb.; and Azoff, 20s. 3d. per 400 lb. Oats.—No. 2 American Mixed, 17s. 3d. per 320 lb.; and Baltic, 16s. 9d. per 304 lb. Linseed.—Calcutta, 40s. 9d. per 410 lb.; and poppyseed, Bombay, 43s. 6d. per 377 lb.

HAY AND STRAW.

Manchester, Friday.—Hay, 4d to 5d; clover, 5½d to 6d; straw, wheat, 4d; oat, 3½d to 4d per stone.

Birmingham, Friday. Small supply; trade quiet. Hay, £3 10s to £3 15s per ton; clover, £4 5s per ton; straw, £3 2s 6d per ton.

Derby, Friday. Best clover, 80s to 90s; wheat straw, 60s to 70s; pressed straw, 50s to 60s; oat straw, 50s to 60s; peat moss litter, 35s to 40s.

WOOL.

Canterbury, Saturday.—Trade in anything a little stronger. Kent fleeces 12d to 12½d per lb, 11½ for Downs, 12½d for half-breds; lamb wool 9d per lb, and 4d to 5d per lb for locks.

Halifax, Saturday.—A little better feeling. Home-grown woods continue in fair request and steady in price, with fine Down woods quoted at 14½d.

Liverpool, Friday.—Wheat: There has been a good attendance of millers at to-day's market, and wheat meets a better inquiry, with holders firm at 2s commercial advance. Manitobas, however, owing to a good supply, are fully 2d dearer. Flour quietly steady at about last market day's prices for both foreign and English brands: demand slow. Maize: Mixed, owing to a fair demand, is firmly held at 2d advance. European grades are quiet, unchanged. Plate is in better request and the turn dearer. Barley: Malting is scarce, and there is a good inquiry for the small lots offered, which are full 2d dearer. Feeding firm, with more doing at 2d advance. Beans firm, with a fair inquiry at about unchanged values. Peas steady at about late rates but demand only moderate. Oats steadily held at full prices for American, but other foreign qualities and English sorts quiet, with little demand. Oatmeal extremely scarce, and held at fully late rates, which checks the demand. Oilcake: A fair to good trade in both American and English cakes at unchanged prices. Meal firm, 2s 6d per ton dearer.—SEGAR AND TUNNICLIFFE.

London, Saturday.—English per pkge. of 240lb.—Fleeces, South Down hoggs, £14 to £14 10s, half-bred hoggs, £12 10s to £13 10s; ditto wethers, £12 10s to £13; Kent fleeces, £12 10s to £13; South Down ewes and wethers, £13 10s to £14 10s; Leicester ditto, £12 to £12 10s; Colonial per lb.—Vics., Fleeces super., 1s 11d to 2s 1d; scoured good, 2s 1d to 2s 2d; scoured average, 1s 11d to 2s; greasy average to fair, 1s 1½d to 1s 2½d; N.S.W., secondary average, 1s 8½d to 1s 9d; greasy average, 11½d to 1s; S. Aus., greasy average, 9d to 9½d N.Z., scoured average, 1s 9½d to 1s 10d; greasy average, 10½d to 11½d; Cape, scoured super., 1s 10d to 1s 11d; fleece, average, 10d to 10½d; greasy average, 7½d to 8½d; Natal, scoured, 1s 5d to 1s 6d; greasy average, 8½d to 9½d; cross-breds—grs.—Vic, good to super., 1s 2d to 1s 3d; New Zealand, fine, 1s 2d to 1s 3d; ditto medium, 1s 0½d to 1s 1½d; ditto coarse, 10½d to 11½d.

Maidstone, Thursday.—There was no change in the wheat trade to-day, the firm tone continuing, but as usual at the approach of Christmas, millers do not buy except for about present need. Rather more inquiry for barley at full rates, and oats are decidedly dearer than last week. Not any alteration in other descriptions of grain.

CHEESE.

Glasgow, Wednesday.—Arrivals of cheese light, demand slow, especially for Cheddars. Anything under finest difficult to move, but parcels strictly choice command 1s above highest quotations. Prices:—Cheddars, 60s to 63s; Dunlops, 56s to 61s.

Newport, Wednesday.—Good supply and fair demand. Quotations:—Caerphillies, 54s to 6s per cwt.; fancy dairies, 63s to 65s; truckles, 56s to 60s; Derbys, 60s to 62s; and Cheddars, 62s.

PROVISIONS.

London, Monday.—Bacon: The arrivals of bacon last week were from Ireland 2,153 bales, and from foreign ports 10,978 bales. The bacon trade was quiet last week, and prices in many cases tending in buyers' favour:—Irish, 59s to 62s up to 66s; Danish, 54s to 62s up to 66s; Canadian, 53s to 55s up to 60s. Butter: The butter market was steady, with—Danish, 118s to 120s; French, 100s to 120s; Russian, 94s to 108s; Irish, 103s to 108s; Canadian, 94s to 104s; Australian, 98s to 114s; New Zealand, 114s to 115s; Argentine, 112s to 114s; American, 84s to 106s. Lard: The lard market was firm:—Irish, 55s to 64s; Danish, 58s to 60s; American, 40s to 41s 3d.

HOPS.

Canterbury, Saturday.—Trade quiet. Choice East Kent Goldings nominally quoted 75s to 85s per cwt., and nothing is obtainable, except yearlings, under 40s per cwt.

London, Monday.—W. H. and H. Le May, 67, Borough, London, report:—The market is quiet; stocks are very small; growers are nearly cleared out. The imports of hops from September 1 to November 30, 1905, were 41,364; for the corresponding period last year, 161,152. The export of hops from England from September 1 to November 30, 1905, were 10,735; for the corresponding period last year, 6,772.

GAME AND POULTRY.

Smithfield, Saturday.—Fair supplies, but quiet demand. Prices: Pheasants, 3s 6d to 4s; young grouse, 3s 6d to 4s; old, 2s 6d to 3s; young partridges, 3s to 3s 6d; old, 1s 9d to 2s per brace; French turkeys, 8½d; Italian, 6½d to 7d; Austrian, 6d to 6½d per lb.; ducks, 2s 6d to 3s 3d; geese, 4s 6d to 6s; Surrey fowls, 2s 9d to 3s 6d; Essex fowls, 2s 6d to 3s; Lincolnshire fowls, 2s to 2s 6d; Irish fowls, 1s 9d to 2s; wild ducks, 1s 9d; woodcock, 1s 9d to 2s; snipe, 6d to 9d; quails, 9d to 1s 2d; feathered pigeons, 7d to 9d; Bordeaux pigeons, 9d to 1s; English hares, 2s 3d to 2s 9d; leverets, 1s 9d; Scottish hares, 1s 4d to 1s 6d; tame rabbits, 1s 2d to 1s 6d; wild rabbits, 8d to 10d each; Australian rabbits, 5s 6d to 7s 6d per dozen. Venison: Haunches, 12s to 15s each; forequarters, 3d per lb.

FRUIT AND VEGETABLES.

Covent Garden, Saturday.—Fairly good supplies and trade steady. Quotations of English produce: Grapes, 3d to 4s per lb.; apples, 7s to 12s per bushel; lemons, 10s to 18s; cranberries, 12s to 15s per case; tomatoes, 2s 6d to 5s per 12lb.; cucumbers, 3s 6d to 6s 6d; endive, 1s 6d to 2s per dozen; celery, 5s to 12s 6d per dozen rolls; artichokes, 1s 6d to 2s per half sieve; beetroots, 2s to 2s 6d; Brussels sprouts, 1s 6d per bushel; parsnips, 2s 6d to 3s; turnip tops, 1s 3d to 1s 6d per bag; cabbages, 3s 6d to 5s; cauliflowers, 4s 6d to 7s 6d per tally; horseradish, 6s 6d to 14s per dozen bundles; seakale, 9s to 12s per dozen punnets; turnips, 2s to 2s 6d; carrots, 2s to 3s; leeks, 1s 6d to 2s; parsley, 1s 6d to 2s per dozen bunches; onions, 4s 6d to 6s per cwt.; mushrooms, 8s to 12s per 12lb.; potatoes, 60s to 90s per ton.

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

A temperature ten degrees above the mean has reduced the retail inquiry for breadstuffs, besides the natural food wants of live stock. London has been busy enough with the crowd that attends on the Smithfield Show, which is the agricultural carnival of the year, but the country markets have been dull, and great ports, like Liverpool, Bristol, and Hull, have also done a smaller trade than usual. Wheat prices are sixpence cheaper for foreign sorts at a number of the larger towns, and the condition of English deliveries showing a falling off, this branch of trade has also presented a weaker appearance. Dry and good samples of English, however, are not lower in price. The market for flour is depressed by reason of America's free offers to ship in January at substantially lower prices than are quoted today at London and Liverpool.

The market for maize continues to be quoted rather freer for immediate delivery, but for delivery a fortnight hence value is a shilling below spot terms, and for delivery a month hence is a florin under currencies, so that buyers naturally pursue a policy of extreme reserve. Barley is steady, both for malting and grinding descriptions. The latest telegrams from San Francisco and Astoria indicate a scarcity of brewing barley in California and Oregon which had not been anticipated. Even if the scarcity be due to a corner and not to crop deficiency, it is a cause for firmer markets here, it taking four months for Pacific shipments to get to England. Oats have been held by some firms for quite fancy prices on the expectation that Russia, the great source of supply, would cease to ship, and that America would then hold back her surplus in order artificially to enhance quotations. These anticipations of importers have not been productive of much beyond an increased caution on the part of buyers, though here and there, where contracts to deliver by a specific date had to be fulfilled, substantially higher prices have actually been paid.

Cereal production during the past ten years is reckoned to have increased largely (by over a hundred million cwts.) in the United States and Argentina. It has increased materially (by over ten million cwts.) in Canada, France, Italy, Germany, Austria-Hungary, and Roumania. A slight increase is shown in India, Bulgaria, Japan, and Uruguay, and no appreciable change is noticeable in Turkey, Belgium, Holland, Spain, Portugal and Greece. The countries were cereal production has declined on the ten years are the United Kingdom, Chili, Mexico, Persia, Egypt, Cape Colony, Norway, Sweden, and Algeria. Good reason exists for believeing that in Algeria the main cause is the extension of the vineyards, and that in Egypt an increased growth of cotton is the cause. Foreign competition accounts for the decline in the U.K., bad government is said to be the cause in Persia. This leaves Chili, Mexico, Cape Colnoy, and Scandinavia unaccounted for. In Cape Colony protective duties are very high.

The following are the latest estimates of the Australasian wheat crops. That for the crop just ripening is necessarily subject to revision.

AUSTRALIAN WHEAT CROPS.

			Qrs.
December, 1905—January,	1906	.....	9,000,000
,, 1904 ,,	1905	.....	7,000,000
,, 1903 ,,	1904	.....	10,000,000
,, 1902 ,,	1903	.....	2,421,000
,, 1901 ,,	1902	.....	5,130,000
,, 1900 ,,	1901	.....	6,895,000
,, 1899 ,,	1900	.....	5,400,000
,, 1898 ,,	1899	.....	6,800,000
,, 1897 ,,	1898	.....	4,200,000
,, 1896 ,,	1897	.....	3,300,000
,, 1895 ,,	1896	.....	3,130,000

Home wants are put at 4,000,000 qr., and, as Australasia, like France, is non-progressive in population, there is no change requisite in this estimate on entering upon a new season.

The New Zealand crop, which is the most uncertain factor in the estimate for 1905-6, has fallen as low as 452,000 qr. (in 1894) and risen as high as 1,630,000 qr. (in 1898).

The world's maize crop is thus estimated; the figures for Argentina and Uruguay are those of March and April last; the growing crop is not advanced enough for any estimate to be of any practical value.

	Qrs.
The United States	340,000,000
Austria-Hungary	20,000,000
Argentina	15,000,000
Roumania	9,000,000
Italy	8,000,000
Russia	4,000,000
Canada	3,000,000
Europe	3,000,000
Uruguay	1,250,000
Turkey	1,000,000
Total	405,000,000

During the nineteenth century maize production varied from 100,000,000 qr. to 343,000,000 qr. The bumper year of that century was 1896, when America, Argentine, and Austria-Hungary all had good yields.

The sales of British wheat at the statute markets since harvest have been large, and the price low.

This season 1,224,000 qrs. at 27s. 6d. per qr.
Last season 651,000 qrs. at 30s. 2d. per qr.

The sales of British barley have been a little above the average, and the price made has been a little below it. No very great differences, however, are disclosed either way.

D shirdlu Id shirdlu Dshrdlu
This season 2,691,000 qrs. at 24s. 5d. per qr.
Last season 1,996,000 qrs. at 25s. 0d. per qr.

The sales of British oats have been small, and the reticence of farmers has been rewarded by a not unsubstantial rise in prices. The market, moreover, is still rising.

This season 394,000 qrs. at 17s. 2d. per qr.
Last season 497,000 qrs. at 15s. 11d. per qr.

Last week's imports into the United Kingdom were :—

Wheat, 425,000 quarters; a large supply.
Flour, 133,200 sacks; a moderate quantity.
Barley, 184,000 quarters; heavy arrivals.
Oats, 76,000 quarters; very small supplies.
Maize, 154,000 quarters; less than usual.

Imports of breadstuffs since harvest have been :—

	Quarters.
This season	6,998,000
Last season	8,390,000

These figures include wheat as flour.

The quantity of wheat on passage to the United Kingdom continues to increase. On the 9th inst. it was as follows :—

	Quarters.
Californian	320,000
American	325,000
Russian	500,000
Indian	271,000
Argentine	460,000
Australasian	40,000
Various	20,000
Total Dec. 9	1,936,000
Total Dec. 2	1,846,000

The quantity of maize on passage has risen from 719,000 qr. to 805,000 qr. in the same period. That of barley, however, has fallen from 605,000 qr. to 560,000 qr., and of oats from 305,000 qr. to 275,000 qr.

Expectations of oilseeds are as follows :—

	Dec. 9, 1905.	Dec. 10, 1904.
Linseed (qrs.)	215,000	130,000
Rapeseed (qrs.)	13,000	25,000
Cottonseed (tons)	50,000	32,000

Shipments from America last week were good, including 314,000 qr. of wheat, 70,000 qr. of barley, 76,000 qr. of oats, 15,000 qr. of linseed, 232,000 qr. of maize, and 111,000 sacks of flour. Argentina sent off 131,000 qr. of wheat, 108,000 qr of maize, and 32,000 qr. of linseed.

Russia, though a smaller shipper than in November, is still sending considerable quantities of grain to other countries. Shipments last week were 575,000 qr. of wheat, 225,000 qr. of barley, 150,000 qr. of oats, and 5,000 qr. of maize. From Roumania 315,000 qr. of wheat, 37,000 qr. of barley, and 2,000 qr. of maize were exported. The last-mentioned item should be noted, for, small as it is, it signalises the abrogation of an old embargo. Maize shipments from Roumania were prohibited on October 1, 1904, and the prohibition was only removed on November 30 last. India last week shipped 67,000 qr. of wheat, and 15,000 qr. of wheat were exported from the Australasian colonies.

SEEDS

London, Monday. There is more demand and inquiry for both cloverss and grasses, with good trade passing at firm prices. English reds are coming out freely, and finding buyers at reasonable prices. Foreign reds completely neglected for the present.—JOHN PICARD AND CO.

TO-DAY'S MARKETS.

MARK LANE, MONDAY,
December 11.

[FIRST REPORT.]

English wheat made fully previous prices for dry lots, but there was a greater proportion than in November of damp grain, and for this the prices obtainable were rather unsatisfactory. Farmers, of course, would do well not to thresh when the temperature is high and the air humid. Foreign wheat tended lower for American and Russian, but actual price charged was difficult to quote. Barley was 6d. dearer on the week for both malting and feeding descriptions, and malt was also the turn in sellers' favour. Oats were held by some firms for a high price, while other houses offered both light and heavy oats at the quotations subjoined. The Russian supply so largely dominates this branch of business that the merchant has to become a politician—or, at least, a critic of politics—in spite of himself. Latest advices from Russia are more pacific, but there is ample ground for holding Russian produce actually in London with a considerable firmness. Beans and peas were firm, and, if anything, a trifle dearer on the week. Rapeseed and cottonseed made fully previous prices, but linseed was the turn in buyers' favour, both for Indian and Argentine descriptio ns.

CLOSE OF THE MARKET.

THE MARKET CLOSED FAIRLY FIRMLY, BUT THE BAD LIGHT WAS AGAINST BUSINESS AND THE FOG LIMITED THE ATTENDANCE.

THE FLOUR TRADE.

MARK LANE, MONDAY, December 11.

Town whites and Town Households to-day recovered 3d. of their recent decline for credit and delivery, but the spot and cash price remained the same as on the 4th. Top price is very steady. Country flour was in large supply and tended slightly in the buyer's favour. The weather is of course all against a large sale of bread, and bakers consequently act with caution. American flour fell 6d. per sack for all the principal types. The Jan. shipment, fine N. W. patents, were offered at 26s. c.f.i., and Manitoba patents were offered at 25s. 9d. c.f.i. The latter made 27s. landed. Hungarian flour was a trifle firmer, and Australian a little weaker from the 4th. In French there was no change and no Argentine was offering. Bran middlings and pollard were in sellers' favour, and American feeding flour was a little dearer on the week. A good price was paid for maize meal, flour, and gluten meal.

Sheep and Lambs	10,630	10,630	11,550
Calves	20	20	0
Milch Cows	60	60	50

Quotations per 8 lb. (sinking the offal):—

ENGLISH.

	Inferior.	Second.	First.
Beasts	3s 0d	3s 8d	5s 0d
Sheep	4s 8d	5s 10d	6s 2d
Lambs	6s 0d	6s 8d	7s 2d
Calves	3s 10d	4s 8d	5s 6d

Milch cows, per head, £16 to £22 10s.

British arrivals include as follows: Scotland, 600; Eastern Counties, 630; Midland, Home and Western Counties, 837; Devon, 300; Ireland, 14.

The second Monday before Christmas Day is the time always set apart for the holding at Islington of the chief market day of the year, commonly known as "The Great Day." The satisfactory exhibition held last week at the Agricultural Hall had prepared us for a good display to-day, and the result has not belied expectations. That there should be a good Christmas market should not be a subject for surprise, but rather looked upon as a matter of course, considering the perfection to which cattle breeding has been brought in this country. As usual, the pick of the market consisted of Scotch beasts, closely vieing with these being the Devons. Both descriptions, so far as weight was concerned, were well up to the butcher's ideal, not carrying too much fat, and being small of bone.

The predominance of small breeds over unwieldy animals was even more clearly demonstrated than in recent years, thus showing that our breeders and graziers have done their utmost to suit the requirements of the butchers. The consignments from Scotland were numerically stronger, and fully up to the average in point of quality, a very fine lot of Polled Aberdeens being seen on the stands of W. Hayward and Slater, Cooks, and Hill. W. Reid, Eve, and Son, Bownd and Son, C. G. Wood, Vivers, Taylor, and Bocock had a very choice show of Polled Scots and Crossbreds. The principal consignors were Mr. Wallace, of Auchterless; Provost Rhind, of Huntly; and J. Cocher, of Lyric; Messrs. A. Beddie; G. Wilson, of Oupar; G. Walker, Tillygreig; A. Ingram McCombie, and A. Fowlie. On Mr. Law's stand were seen some very good specimens of the Devon breed, these being equal to the former in all points.

Turning now to other descriptions, we note a great falling off both in quality and numbers as regards Herefords, the season for these being now practically over. Runts were shorter in number but quite up to Christmas requirements.

Some exceptionally choice Norfolk cattle were shown on the stands of Messrs. W. Law, F. Syder, E. and P. Chapman, A. Allday, and E. Neve, the majority being consigned by the well-known breeder and grazier, E. Chapman. There was an average supply of Shorthorns, the quality of which, taken as a whole, was good. Ireland was well represented by some very choice Dublin Show cattle, which were to be seen on the stands of Messrs. Oliver, McTurk, and Bunker; Mr. Fitzgerald showing a remarkably good consignment of Waterfords.

There was an increase of 260 head compared with the last Great Market Day. Business was extremely late in commencing owing partly to the dense fog prevailing. Trade taken as a whole was of a slow nature, due to the overstocked state of the Dead Meat Market and the fact of the market being held so long before Xmas Day; the tendency in regard to value was a downward one, both Scotch and Devons being quoted 2d. per 8 lb. lower than last year. The Irish arrivals consisted of 107 Dublins and 28 Waterfords, also 8 Store Cattle, for which there was absolutely no enquiry. Dublin Cattle met with a fairly steady trade in average supply and met a poor enquiry from both Town and country buyers. A clearance is not expected to be made, but it is too early for a great Market to state anything definite.

The following are top quotations per 8 lb. (sinking the offal):—

	To-day.	Monday, Dec. 12, 1904.
Scotch	4s 10d to 5s 0d	4s 6d to 4s 8d
Devons	4s 7d to 4s 8d	4s 6d to 4s 8d
Herefords	4s 4d to 4s 6d	4s 2d to 4s 4d
Polled Norfolk	4s 8d to 4s 10d	4s 4d to 4s 6d
Plain No folk	4s 4d to 4s 6d	—
Runts	4s 4d to 4s 6d	4s 2d to 4s 4d
Lincolns	4s 2d to 4s 4d	3s 10d to 4s 0d
Irish Dublin Sh. Cattle	4s 10d to 5s 0d	4s 4d to 4s 6d
Irish Plain	4s 2d to 4s 4d	—
Waterfords	4s 0d to 4s 2d	3s 10d to 4s 0d
Fat Cows	3s 6d to 3s 8d	3s 2d to 3s 4d

Number of beasts offered for sale since 1842.

Year.	Beasts.	s. d.	s. d.	Year.	Beasts.	s. d.	s. d.

1873	6,170	4 8 to 6 8		1905	2,510	3 0 to 5 0	

Turning our attention now to the sheep market, we note an increase in the supply compared with the corresponding day last year, amongst which was a fair proportion of lambs, the assortment of the former consisted chiefly of Downs and Half breds. The total number available, amounting to 10,630 head, proved 320 less than on the last great day. Some very fine Halfbred and black-faced sheep, numbering about 500, were to be seen on Mr P. Chapman's stand, these being consigned by Messrs Walker, Cooke, and Buttomley the well known graziers. Thomas & Son and R. Worboise showed a fine lot of Down Legs, Wethers, Black-faced Downs, and choice lambs. Messrs. F. Lloyd and Stimson & Son were well to the fore with Hampshire Dawn Legs, Wethers, Scotch ditto, Down Ewes, Dorset ditto, and 90 Halfbred Dorsetsne king lambs (these were exceptionally choice. Messrs. Woodward & Son the oldest established firm of sheep salesmen on the market at the present time, showed some very choice Lincoln Halfbreds. Taking the show as a whole, it comprises as regards quality very favourably with past years. Trade as usual on a great Market Day opened with an entire absence of life, butchers being occupied on the beast market until late in the day. Scotch descriptions were short on number and, being of good quality, cleared early. Irish descriptions were in good supply for the time of year but ruled dull throughout the day. The tendency in regard to value was an upward one. Lambs met with a steady enquiry, all on offer finding buyers. Notwithstanding the increased activity as the day advanced it is feared a clearance will not be effected.

Undermentioned quotations are at per 8 lb. (sinking the offal), and are for the best of each class penned:—

	To-day.	Monday, Dec. 14, 1904.
8st Scotch	5s 10d to 6s 0d

Calf trade slow, best small breeds making from 5s 4d to 5s 6d per 8 lbs (offal given in.)

No pigs on the market.

London (Central), Monday.—Good supplies, quiet demand. Beef: Scotch, 3s 8d to 4s 2d; English, 3s 4d to 3s 5d; American, 2s 9d to 3s 3d. Mutton: Scotch tegs, 4s 8d to 5s; wethers, 4s 4d to 4s 8d; ewes, 3s 4d to 3s 6d; English wethers, 4s 2d to 4s 6d. Lamb: New Zealand, 2s 8d to 2s 10d; Dutch, 3s 8d to 4s. Veal: 3s 8d to 4s 8d. Pork: 3s 10d to 4s 6d

FOREIGN

Deptford, Monday.—To-day's supply of beasts, compared with Monday last, consisted entirely of shipments from the United States, trade for which was firm and steady at an advance of 2d per 8lb on late rates. Besides the above, 750 more were withheld from Wednesday. The best States on offer were quoted at from 4s 2d to 4s 4d per 8lb, seconds 3s 10d to 4s per 8lb (offal given in). On Saturday 2,000 beasts from the United States were offered for sale, and met with a firm trade at an advance in value. Besides the above, 800 States and 460 Canadians were held back for Monday. The best States on offer were quoted at from 4s to 4s 2d, seconds 3s 8d to 3s 10d per 8lb (offal given in).

THE BALTIC. 1 p.m.

STATE OF TRADE.

Holders of wheat, maize, oats, and barley cargoes are firm, and linseed is the only article offered at any decline. For the few cargoes of beans, peas, and rapeseed available rather higher prices are asked, and despite a large supply on passage cottonseed is quite firm.

BUSINESS DONE.

WHEAT.—No. 1 Northern Manitoba, 32s 3d per 480lb., February shipment; No. 2 Northern Manitoba, 31s 9d per 480lb., February shipment; Santa Fé, 31s 3d per 480lb., February shipment; Bahia Blanca, 32s 6d per 504lb., March shipment; Bahia Blanca, 31s 6d per 492lb., February shipment; Walla Walla, 32s 3d per 500lb., prompt shipment; Odessa Ghinka, 32s 9d per 492lb., due; American Red Winter, 34s 6d per 501b., on passage.

BARLEY.—Odessa, 20s 6d per 400lb., on passage; Californian, 27s 9d per 448lb., on passage.

OATS.—American, 17s 9d per 320lb., January shipment; Baltic, 16s 9d per 304lb., on passage.

MAIZE.—Argentine, 21s 6d per 480lb., New Crop, June shipment; American, 20s 3d per 480lb., New Crop, January shipment.

BEANS.—Syrian, 35s per 480lb., prompt shipment; New Zealand, 36s per 504lb., prompt shipment.

PEAS.—Indian White, 29s per 504lb., New Crop, May shipment; Indian Green, 29s per 504lb., arrived.

LINSEED.—Argentine, 38s per 416lb., arrived; Calcutta, 40s 6d per 410lb., on passage.

HEMPSEED.—Riga, 48s per 336lb., on passage.

COTTONSEED.—Egyptian, £5 15s per 2,240lb., on passage.

Milling Offal.—Milling offal remains firm and scarce at last week's prices.—JOHN BAWCOMB AND Co.

Arrivals are liberal of Canadian and Russian wheats. The trade is steady at prices of last Monday. Flour sells slowly at late rates. Maize and barley firm. Oats dull, and Americans are 3d. per qr. dearer.—COVENTRY.

LIVE STOCK AND MEAT TRADE REVIEW

(WRITTEN SPECIALLY FOR THE "MARK LANE EXPRESS.")

Trade in London.

Review of the Week's Cattle Trade.

For fat beasts of both prime and second quality, trade, practically confined to Monday, opened and continued of a very slow and dragging nature, with a downward tendency in value, though not quotably so; the want of life being partly attributed to the near approach of the great Christmas market, which is to be held on Monday next, butchers holding back their purchases for that day. The majority of the supply was drawn from the Midland, Home, and Western counties; the arrivals from the Eastern counties are on the increase. The Irish consignment consisted entirely of store cattle (one and a half year olds); these, meeting with little or no inquiry, were practically unquotable. Fat butchering cows of choice quality on both market days well upheld late currencies, whilst, on the other hand, middling quality cows and bulls met with little demand even at a decline of from 1d. to 2d. per 8 lb. in value.

At the Foreign Cattle Market, Deptford, trade was slow throughout the week, but on Wednesday, notwithstanding this, an advance of 1d., and occasionally 2d., per 8 lb. was asked and obtained. The total number on offer at both markets was 4,094, as against 4,900 during the previous week, consisting of 1,100 British (decrease 180) and 2,994 Foreign (decrease 626), comprising 2,854 States and 140 Canadians. The following were the top rates paid per 8 lb. (sinking the offal):—80 to 90 stone Devons, 4s. 4d. to 4s. 6d.; 90 to 95 stone Herefords, 4s. 4d. to 4s. 6d.; 95 stone Runts, 4s. to 4s. 4d.; 90 stone Norfolks, 4s. 4d. to 4s. 6d.; 100 stone Shorthorns, 3s. 10d. to 4s.; 110 stone ditto, 3s. 8d.; 90 stone States, 3s. 10d. to 4s., ex. 4s. 1d.; 95 stone Canadians, 3s. 5d. to 3s. 7d.; 90 stone fat cows, 3s. 4d. to 3s. 6d.

The sheep trade at Islington, with a decrease in the supply throughout the week, ruled dull and dragging, rates ruling in favour of the buyer; Irish showed a marked falling off in numbers, and a decline of 2d. per 8 lb. in value; on the other hand, Scotch sheep sold steadily, all on offer being disposed of. No sheep on offer at Deptford. The total number penned at Islington was 5,560, as against 6,161 during the previous week, consisting entirely of British consignments. Best pens made per 8 lb. as follows (sinking the offal): 7½ to 8 stone Downs, 5s. 8d. to 5s. 10d.; 8 stone Scotch, 5s. 8d. to 5s. 10d.; 9 stone Downs, 5s. 6d. to 5s. 8d.; 9 stone Irish, 5s. 2d. to 5s. 4d.; 10 stone Downs, 5s. 4d. to 5s. 6d.; 10 stone Half-breds, 5s. 4d. to 5s. 6d.; 10 stone Down ewes, 5s. 4d. to 5s. 6d.; 11 stone Hampshire Tegs, 5s. 6d. to 5s. 8d.; 10 stone Down ewes, 3s. 10d. to 4s.

Calf trade was nominal, only 20 being on offer during the week.

Pigs numbered 40, and met a slow but firm trade, best small breeds being quoted at from 4s. 2d. to 4s. 4d. per 8 lb.

Trade in the West.

The revival in business in most kinds of store things to which we referred in our last issue has been more than maintained.

There is also a good healthy inquiry for the plainer qualities of both cows and heifers, at widely varying prices, ranging from £16 down to as low as £12 or £13 for very common-place cows whose time for dairying purposes is almost at an end. In-calf beasts, both cows and heifers, are also commanding a healthy sale, and business all round may just now be accurately described as thoroughly sound.

The improvement is equally satisfactory both as to demand and price, as regards fat stock of nearly every class, beasts, to begin with, being unusually firm, especially for all the neater weights in Devons, which are being caught up very readily for the Christmas trade at 12s. to 13s. per score for the choicest grades (or from £24 to £32 each for steers and heifers), medium qualities selling at 11s. to 11s. 6d., and secondary descriptions at 10s. to 10s. 6d., even rough bullocks selling at 9s. to 9s. 6d. at sheep, too, are also meeting a much more active inquiry, especially small weights in either wethers or tegs, at from 50s. to 60s. each or 6s. per stone); heavier descriptions are a shade easier, at 5s. 4d. to 5s. 8d.; but coarse heavy ewes, old sheep, are still not very easy to cash.

Pigs still maintain their supremacy as being the best selling and dearest thing on the market. Last week we quoted small porkers at 11s. per score; now they have jumped another 6d., if not more; whilst hogs bring 9s. 6d. to 10s. 6d.; and sows 7s. 9d. to 8s. 6d., according to quality.

Trade in Scotland.

The number of fat cattle on offer this week has been a fair average, and the general quality good. A steady trade has been experienced throughout, and prices as nearly as possible without change from the previous week. A full average show of fat cows also made previous prices. Fat sheep in average numbers, but the general quality not quite so good as the previous week. Everything adapted for shop purposes met a good inquiry at fully previous prices, but owing to the middling reports from London those adapted for that market made no advance in price. Ewes selling fairly well. The supply of calves was rather under the average, and prices rather lower. Pigs offered in fair numbers, and they met an exceedingly good demand at hardening rates. A small show of store cattle, and they met a very dull dragging market, and about half the number on offer would be left unsold. Good milch cows very dear, secondary cheaper. Quotations:—Top price of best cattle per live cwt., 38s.; current, 34s. 6d. to 36s.; mutton from 7d. to nearly 9¼d. per lb.—JOHN SWAN AND SONS, LTD.

Trade in Ireland.

The quality of the cattle was very poor, the great majority being coarse and only half-finished, and the consequence was that values (live weight) for the small number of prime heifers and bullocks advanced quite 1s. 6d. per cwt., the scale average running between 30s. to 32s. 6d. for Shorthorns, and 32s. to 35s. for Polls. Out fed cattle were lower than the previous week, and it was with great difficulty that anything like a clearance could be effected in coarse cattle. The attendance of buyers at the market was, however, large, as last Thursday was the Christmas market, and the Liverpool and Manchester men put in a good appearance, and for really choice lots up to 10s. and 15s. a head more was given; but other sorts may be put down as duller than ever.

There was a fair demand for really good sheep. Stiffer quotations were made for good heavy Dublin wethers, and nice hardy Cheviot sheep, which fetched the extreme rates of the previous market. For coarse sheep, trade was very slow, and prices easier. Some large drafts of hoggets were taken for the London market at prices ranging from 54s. to 58s. each, and others at from 45s. to 53s. A pen of Border-Leicesters, sold at Ballsbridge Show, made 75s. a head; and the Silver Cup winners there were bought by a Dublin victualler at £5 each. These sheep were "Roscommon" and fed in that county. Good veal in request at from 8d. to 8½d. per lb., other sorts neglected at from 4½d. up. Dairy cattle of good class are now rating dearer, but middling or inferior cows attract few customers. Choice springers made from £19 to £21; rough cows from £9 upwards.

LONDON.

Islington, Thursday.—Beast supply consisted chiefly of fat butchering cows and bulls, and small consignment of prime quality cattle; for latter there was no inquiry, and rates are unquotable. On other hand, fat cows and bulls, though slow of sale, fully upheld last Monday's quotations. Top value: Fat cows, 3s 6d; fat bulls, 2s 10d to 3s 1d per 8lb. Increase of 40 in number penned in sheep market, supply consisting entirely of Downs and halfbreds, which showed no quotable decline in value, the near approach of Christmas market naturally making trade very slow, retail butchers buying short in order to have clear shops for this day. Leading pens made per 8lb. as follows:—8st Downs, 5s 8d to 5s 10d; 9st ditto, 5s 6d to 5s 8d; 10st ditto, 5s 4d to 5s 6d; 10st halfbreds, 5s 4d to 5s 6d; 10st Down ewes, 3s 10d to 4s; 11st Hampshire tegs, 5s 6d to 5s 8d. Calf trade nominal. Pig trade slow, at decline of 2d per 8lb. Quotations per 8lb., sinking the offal:—Beasts, 2s 10d to 3s 6d; sheep, 3s 10d to 5s 10d; pigs, 2s 10d to 4s 4d. Total supply:—Beasts, 110; sheep, 120; calves, 10; pigs, 40; milch cows, 5.

London (Central), Friday.—Very slow demand again for the good supplies submitted, at about late values. Arrivals of beef included 70 tons Scotch, 200 Liverpool sides, 2,000 hindquarters, and 1,400 forequarters American refrigerated; also 950 Argentine chilled hindquarters and forequarters. Quotations: Beef, Scotch short sides, 4s to 4s 2d; long sides, 3s 8d to 3s 10d; English, 3s 4d to 3s 5d; American, Deptford-killed, 2s 10d to 3s 3d; Liverpool sides, 2s 9d to 3s 2d; New Zealand hindquarters, 2s 4d to 2s 8d; forequarters, 1s 9d to 1s 10d; American, refrigerated hindquarters, best, 3s 4d to 3s 8d; forequarters, 2s 3d to 2s 5d; Argentine chilled hindquarters, 2s 4d to 2s 6d; forequarters, 2s to 2s 2d. Mutton: Scotch tegs, 4s 8d to 4s 10d; extreme, 5s; wethers, 4s 4d to 4s 8d; ewes, 3s 4d to 3s 6d; English wethers, 4s 2d to 4s 6d; ewes, 3s 2d to 3s 4d; New Zealand, 2s 4d to 2s 8d. Lamb: New Zealand, 2s 8d to 2s 10d. Veal: English and Dutch, 3s 8d to 4s 8d. Pork: English, 3s 10d to 4s 6d; Dutch, 3s 10d to 4s 4d per 8lb.

COUNTRY.

Ashford, Tuesday.—Beef trade steady at last week's rise, best steers making 4s 4d to 4s 6d per stone. Mutton was not much wanted, and butchers reduced their offers, but sellers held firmly, and many sheep went away unsold. Nominally 6s was the top price for best Downs, and 5s 8d for best Kents. Veal, in short supply, made previous rates. Pork was in request, and best porkers made quite 4s 6d per stone.

Basingstoke, Wednesday.—At Raynbird and Sons' Sale Yard there was a good attendance of buyers to meet a supply of 47 fat beasts, 52 calves, 356 fat sheep and lambs, 225 pigs, and 195 head of dairy and store cattle, for which the following prices were realised:—Prime quality fat Devon steers, £20 to £26; heifers, £20 5s; and cows, £13 5s; Shorthorn steers, to £17 15s; heifers, £15; and cows, to £15; Polled steers, £17 5s; Short horn bulls, £14 to £17 10s; West Highland cows up to £10 10s; fat calves, 80s to £5 10s; small, 20s to 55s; fat hogs, up to £5; porkers, 48s to 77s; small, 35s to 46s; store pigs, 10s to 23s 6d; dairy cows, £8 10s to £20 10s; best Down wethers and young ewes, from 55s to 58s; eleven months old, 50s to 56s; small, 42s to 48s; crossbreds, 55s to 42s; old Down ewes, 55s to 42s; Down lambs, 45s to 48s; small and inferior, 35s to 42s. The show of fat beasts included some good Devon steers and heifers, which were mostly sold at late rates. There is more demand for fat cows; half fat and inferior beasts continue a bad trade. Best quality Down wethers and young ewes were cleared at last week's figures. To make sales lower prices had to be taken for ewes, rams, and inferior sheep. Dairy cows of good class found buyers at late prices, a clearance being made at satisfactory values. Store cattle met a fair demand, most of the lots on offer being sold, but no advance in prices can be reported. A short supply of fat calves met with a brisk trade for good quality calves. Fat hogs and porkers maintain their price, the supply being unequal to the demand, and throughout the sale a brisk trade was done. Fat sows sold well at late rates. Store pigs are inquired for and sell readily. Ruling values: Best fat beasts, 6½d to 7d; second ditto, 6d to 6½d; bulls, cows, and inferior, 4½d to 5½d per lb.; best fat sheep, 8½d to 9d; second ditto, 7½d to 8d; old ewes, rams, and inferior, 6d to 6½d per lb.; fat calves, 7d to 8½d per lb.; fat hogs, 9s to 10s 6d; fat porkers, 11s to 12s; fat sows, 7s 6d to 8s 6d per score.

Berwick, Saturday.—Number of beasts penned was 77 less than previous week, total being 362. The attendance of farmers and buyers was small, quality of stock fair, and trade slow. Calves, £4 10s to £6; stirks, £8 to £10 15s; two-year-olds, £13.

Birmingham, Thursday.—Good supply of pigs; small supply of beasts and sheep; trade slow. Beef, 4½d to 6d per lb; a few Herefords, 6½d per lb; mutton, 6½d to 8½d per lb; bacon pigs, 9s 6d to 9s 8d per score; cutting pigs, 9s 10d to 10s per score; porkets, 11s 3d to 11s 6d per score; sows, 8s 4d per score.

Bristol, Tuesday.—Moderate quantity of beef, which realised slightly better prices, being quoted at 56s to 58s, and secondary at 53s, but trade was dull. Sheep were in less number, and demand quiet, but all grades maintained values except ewes, which declined to 6½d. Pigs were rather more numerous, and last week's rates prevailed.

Canterbury, Saturday.—Only about fifty sheep on offer; scarcely any demand. A few Welsh and Irish bullocks met no sale.

Calne, Friday.—**Present prices for prime pigs, in lots of not less than ten, on rail within 100 miles of Calne.**

Prime Stores.	Thickness of fat in any part of Back.	Price per Sc. s. d.

Under 11 sc. 10 lb.	2¾ in.	9 0
Under 12 sc.	3 in.	8 6

C. AND T. HARRIS AND CO., LTD.

Carlisle, Saturday.—Very small show on the Sands, the smallest for several months. A number of buyers attended, and a ready sale was experienced at £8 10s to £12 10s per head for Irish heifers.

Chester, Thursday.—Large show of Irish cattle, but a rather poor selection of fat stock. With a moderate attendance of buyers trade was slow for all classes. Quotations: Milch cows, £17 to £22; calvers, £14 to £18; barrens, £11 to £14; and stirks, £9 to £11.

Colchester, Saturday.—Good supply all round, with the exception of mutton, an ditrade fair. Beef (best quality), 5s to 5s 4d; other qualities, 4s to 4s 6d per stone; mutton, 5s 6d to 6s 4d per stone; pork, 9s to 10s per score.

Doncaster, Saturday.—Large supply of cattle, but only a moderate attendance, and trade slow except for good bullocks. Prices unchanged. Milch beasts, £16 to £23; bullocks, £12 to £17; heifers and drapes, £11 to £15; stirks, £7 to £9; young stock, £5 to £7 each. Poor show of sheep, and few buyers. Hoggs, 38s to 46s each.

Dorchester, Saturday.—The first of the great Christmas fat stock markets was held to-day, when there was an exceptionally full supply, which included some grand quality bullocks, both steers and heifers, both at Messrs. Duke and Son's, and also at Messrs. Symonds and Sampson, the latter firm having a prize competition, at which some £30 was given in prizes for fat beasts and sheep, these exciting considerable rivalry, Mr. G. Gillett, Marlock, Somerset, and Mr. T. Matthews, Symondsbury, Bridport, making the awards, in which Mr. J. Wyatt, of Dorchester, was one of the chief prize takers, he having secured the blue ribbon for having the best beast in the market, independent of a number of other prizes. As regards cattle, there was an exceptionally good demand for all the bettermost grades of bullocks, both steers and heifers, which brought £21 up to £28 10s (or 11s. 6d. to 12s. per score); fat cows, £23 to £26 (or 10s. 6d. to 11s.) The mutton trade was steady for anything ripe in wethers or young ewes, which made from 42s. up to 55s. each (or 8d. to 8½d. per lb.); seconds slower sale at 7d. to 7½d. Lamb not a particularly fast sale, except for anything choice and of good quality.

Dublin, Thursday.—A well-sustained inquiry for the best-finished descriptions of bullocks and heifers, prices for which were better. The drop in supplies helped to steady the demand for rougher sorts, which cleared at about late rates. Some good lots of stall-feds brought the extreme market quotations. Best qualities of sheep for home and export purposes easier sold dat last week's prices; other descriptions unaltered. Cattle, live weight (best), 28s to 30s per cwt; extra for Angus crosses and choice stall-feds, to 33s per cwt; rough sorts, 24s to 27s 6d per cwt. Mutton, dead weight, 5½d to 7½d per lb.

Edinburgh, Wednesday.—Lighter supplies of sheep, but good selling trade. Cheviot Dunmonts, 31s to 37s 6d; half-bred hoggets, 26s to 34s; crosses, 26s to 28s. Small show of cattle and dull market. Horned bullocks to £12 10s; stirks, £10; best shorthorn cows, £25; secondary, to £23; Ayrshires, £18 15s; crosses, £18 to £20.

Glasgow, Wednesday.—Supplies larger and trade fair. Prices steady. Top Scotch cattle, 64s; current, 58s to 60s; top Irish, 56s per cwt; top hoggs, light weights, 9¼d; heavy weights, 8¾d to 9d; top wedders, 9d; aged wedders, 8d to 8¼d per lb. Dea meat firm, as supplies are shorter; best Scotch beef, 6½d; best States, 5½d; best Canadian, 4¾d to 5d per lb.

Gloucester, Saturday.—Messrs. Bruton, Knowles and Co. report their sales as follows: A large supply of cows and calves (90), with good trade for the best quality. A fair supply of store cattle, with trade about the same.

Leicester, Saturday.—Moderate consignments of home-bred stock, and trade very sluggish, with prices very low all round. Milch cows, £17 to £19; inferior, £14 to £16; shorthorn bullocks, £11 to £13; Welsh cattle, £9 to £11; calves, 20s to 35s per head.

Lincoln, Friday.—Beasts marketed in good numbers, and trade ruled dull. Yearlings made £8 to £10; two-year-olds, £12 to £16; drapes, £10 to £12. Small show of sheep, and a fair trade. Hoggs, 40s to 43s.

Lynn, Tuesday. Larger show of fat beasts, trade very slow, 7s to 7s 6d per stone. Few stores, trade very slow, £6 to £14 each. Small show of fat sheep, trade slow, 9s to 10s per stone. Few store sheep, 44s each.

Manchester, Friday. Beef, firsts, 4½d; seconds, 4d to 4½d; thirds, 3d to 3½d. Mutton, firsts, Cheviots, Scotch, 7½d; others, 7½d; seconds, 6½d to 7d; thirds, 5½d to 6d. Veal, firsts, 7½d; seconds, 6½d to 6¾d; thirds, 5½d to 5¾d. Bacon pigs, firsts, 5¼d; seconds, 4¾d to 5¼d; thirds, 5¾d to 4¾d. Porket pigs, firsts, 7d; seconds, 6d to 6½d; thirds, 5d to 5½d.

Norwich, Saturday.—This was the Christmas market, and consequently much business in fat stock sections. Large supply fat beasts of good quality, and prices averaged from 7s 6d to 8s per stone, a few choice over year animals making up to 9s. Keen competition for fat sheep, which were in large supply, prices being 9s 6d to 10s per stone. Trade not so good for fat pigs, a drop of 3d per stone in some instances, and prices realised 6s 6d to 8s 9d per stone. Large number of store cattle offered, late rates being maintained. Store sheep in short supply; prices 35s to 45s per head.

Nottingham, Saturday.—Small show of milch beasts, with improved trade. Best milch cows, £18 to £22; in-calf heifers, £13 to £19. Rather poor supply of store beasts, for which a similar demand to that of last week was experienced; strong heifers and steers, £9 to £13; younger beasts, £6 to £9; calves, 25s to 50s. No sheep or pigs were on offer.

Preston, Wednesday.—Fairly good supply of sheep, but a rather slow trade was experienced, prices showing a slight advance on last week. Cows and bulls, 5d to 5½d; heifers and bullocks, 5½d to 6d; exceptionally choice beasts, 6½d. Sheep were also slightly dearer; hoggs, 8½d to 9d; tups, 5½d to 6d; ewes, 6½d to 7d; lambs, 8½d to 9d per lb.

Retford, Saturday.—Milch beasts of good quality were in demand, at £18 to £20; medium, £16 to £17; two-year-old steers and heifers, £10 to £12; yearlings, £6 to £8; calves, 40s.

Romford, Wednesday.—Average supply of fat beasts, trade unchanged. Best animals, 4s 4d to 4s 6d; middlings, 3s 10d to 4s per stone. Calves scarce, trade better at 5s 2d to 5s 4d per stone. Sheep in short supply, trade about the same; best, 5s 10d to 6s; middlings, 5s 4d to 5s 6d; ewes, 4s to 4s 2d per stone. Very slow demand for store beasts. Pig trade unchanged.

Shrewsbury, Tuesday.—Usual supplies, but prices generally had a downward tendency. Quotations:—Beef, 5½d to 6¼d per lb; mutton, 7¾d to 9d per lb; veal, 7d per lb; porket pigs, 8s to 10s 3d per score; bacon pigs, 9s to 10s per score. Numbers offered as follows:—Cattle 689, sheep 582, calves 65, and pigs 490.

Thame, Tuesday.—There was a smaller entry of stock, no doubt many waiting for the Christmas sale on Tuesday next, for which a large entry has been received. Beef met late quotations, and sheep were a slightly better trade. Bacon and pork quickly disposed of at advanced prices. Weaning calves wanted. Messrs. Bond and Burrows' sale comprised 49 fat beasts, 136 fat sheep, 80 fat and weaning calves, and 107 fat and store pigs. Fat oxen made from £17 to £20, fat heifers £15 to £17 15s, fat wethers 48s to 53s, fat ewes 45s to 53s 6d, fat calves £3 5s to £5 5s, weaning cow calves 28s to 56s, bull calves 10s to 48s, bacon hogs £4 to £5 10s, porkers 28s to 48s, store pigs 10s to 26s.

Truro, Wednesday.—Business fairly brisk. Attendance very good.—Fat bullocks, 54s to 60s per cwt; barreners and store bullocks, 40s to 45s per cwt; cows and calves, £10 to £16 each; rearing calves, 20s to 35s; wethers, 7d to 7¼d per lb; ewes, 5¼d to 6d; lambs, 7¼d to 8d; pigs, 9s to 10s each.

Wolverhampton, Wednesday.—Fair supply all round; slow trade.—Beef, 5d to 6½d per lb; mutton, 6½d to 9d per lb; veal, 6½d to 7½d per lb.

Worksop, Wednesday.—Very small show of stock and small attendance. Beef was down about 3s per stone. Best beef, 6s 3d to 7d; secondary, 6s to 6s 6d per stone; best Southdown and cross breds, 7½d to 8½d; ewes, 5d to 7d per lb.

Yeovil, Friday.—Good demand, but trade quiet in other departments. Cows and heifers, with calves, made from £17 5s to £20 10s; secondary, ditto, from £12 17s 6d to £16 5s; in-calf heifers, £10 to £13; barreners, £9 to £10 5s; coming two-year-old heifers, £8 to £10; store steers, £9 10s to £11s; horn wethers, 42s 6d to 80s; horn ewes, 38s to 46s; Down ewes, 34s to 40s; Down wethers, 43s 6d to 52s 6d; crossbred lambs, 30s to 35s.

York, Thursday.—Above an average show of both English and Irish cattle for time of the year, though fewer than for last few weeks, and trade for store cattle continues in a depressed condition. In a few cases late prices were maintained, but the general run of prices was a shade lower than usual. The best demand is for strong three-year-old cattle full of flesh, and one or two made up to £16 10s, while a few lots of very useful cattle made up to £12 or £13. The English cattle were chiefly stirks, a few young beasts selling from £8 to £9 10s. Rather smaller show of calving and milch cows, which were in good demand, some of the best making up to £22 each, the usual run being from £16 to £19; cows rather less fit were selling at less money. A slow trade for sheep. Shearlings made up to 42s, twice-crossed lambs 32s to 46s, and Mashams 25s to 35s.

POTATOES.

Borough, Saturday.—Fair supplies but demand remains slow. Best silts, 60s to 65s; Blacklands, 50s to 55s; Scotch, 60s to 70s; Dunbars, grey soil, 80s to 90s per ton.

Goole, Wednesday.—Small attendance, but plenty of potatoes on offer. Prices ranged from 4s 6d to 6s per load; retail, 5d to 6d per stone.

Soutnwark (Waterside), Saturday.—During the past week the arrivals have been heavy, and stocks have accumulated. Prices for all samples have been very weak, and the demand slow. The following are this day's quotations:—Scotch Up-to-Dates, 50s to 65s; ditto British Queens, 50s to 65s; Lincoln Evergoods, 50s to 60s; ditto Up-to-Dates, 60s to 70s; Blackland Up-to-Dates, 50s to 55s; ditto British Queens, 50s to 55s; ditto Evergoods, 50s to 55s per ton.

Spitalfields, Saturday.—Heavy supplies, but were in slow request. Royal kidneys, 55s to 60s; British Queens, 55s to 60s; Blacklands, 50s to 55s; Up to date, 60s to 65s; Queens, 60s to 65s per ton.

York, Saturday.—Good attendance and fair demand, for which there was an adequate supply. Sands made up to 45s per ton; Warps, 45s to 52s.

Quotations, best medium are in good demand, and there

CHAS. FARAM AND CO.

HOPS

Worcester, Saturday. — Notwithstanding the near approach of the Christmas holidays trade keeps good, and prices work gradually dearer. In the absence of choicest qualities best medium are in good demand, and there is a strong inquiry for rich brown hops; 271 pockets have been weighed this week, making the total 28,274.—

CAAS. FARAM AND CO.

FEEDING STUFFS.

Hull, Tuesday. Linseed: The arrivals are 100 qrs from Harlingen, 1,023 Riga, 5,051 St. Petersburg; total, 6,154 qrs. The shipments for the week ending December 1, were:—Plate: 37,000 U.K.; 34,500 Continent. Calcutta: 9,000 Continent. Bombay: 14,000 Continent. Linseed has been quiet until the close when a better demand has sprung up and 6d to 9d advance paid. River Plate: Spot after selling at 37s 9d is now held for 38s 3d. Afloat and November-December sold at 38s 6d, January-February 37s 6d nearest. Cottonseed: The market has been steady and rather a better seller for Egyptian at £5 12s 6d spot, £5 11s 3d and £5 12s 6d passage, and November £5 12s 6d to £5 13s 9d paid December-January. To day the market is firm at £5 12s 6d spot, and passage £5 13s 2d December-January. Bombay has found occasional buyers at £4 18s November, £4 18s 6d to £4 16s early December, and £4 14s 6d paid January-February shipments. Oilseed cakes: Market steady without material change in value. KEIGHLEY, MANSTED AND CO.

London, Thursday. Linseed: Market has been very strong and full prices paid, especially in new crop to the Continent. Sellers very reticent. Calcutta-London Spot, 40s 9d; afloat, 40s 9d; October-November, 40s 9d; November-December, 40s 6d; April-June, 38s 6d. Rapeseed firm and sellers very reserved, but buyers so far not much in evidence. Cottonseed has become firmer, and prices have improved, chiefly owing to linseed having advanced. London — Near at hand £5 15s, December-January £5 17s 6d now asked. Oil cakes: Linseed cakes firm; London-made £8 5s to £8 10s. Cotton cakes firm; London-made £4 17s 6d to £4 18s 9d.—THE PRODUCE BROKERS COMPANY, LTD.

London, Monday.—Linseed cake: Trade keeps quiet, but with light stocks of both foreign and home-made; prices are well maintained. Undecorticated cotton cake: Considering the comparatively low figure, trade is a little disappointing, but a better business is predicted with the turn of the year. Decorticated cotton cake and meal: Stocks of meal and foreign cake are exhausted, so prices are nominal. Linseed: A good trade, and market advancing.

ROBERT AND JOHN HEWETSON.

Mark Lane, Monday.—Linseed cakes: Supplies of foreign are somewhat on a more liberal scale, and, with only a poor demand, values rule quiet, in spite of the strong position of the seed market and a limited home production. Russians move off slowly at about last week's prices. Americans remain dull, but without change. East India seed pures are available for arrival at a comparatively low figure. London made, being only sparingly offered, command full prices. Cotton cakes: With some heavy arrivals of Egyptian the market is barely as strong, with sellers of spot parcels at 1s 3d per ton less money. English are difficult of sale, even at the lower quotations, which is also applicable to Bombays. Decorticated: London made continues in good request, probably owing to their excellent quality. Rape cakes are scarce and dear. Maize germ meal: Some white American shortly due is obtainable at a reasonable price, while English makes are particularly firmly held. Maize gluten feed may now be bought for monthly deliveries during the whole year of 1906. Rice meal: A fair quantity in second hands has been cleared off the market at a slight advance both as regards Rangoon and Saigon, while broken Rangoon rice is also the turn dearer. Locusts beans are relatively cheaply offered both for whole and kibbled. Nitrate of soda for spring delivery without change.

EGGS

Friday. — Altrincham: 5. Ashburton: 1s 6d to 1s 7d per dozen. Barnstaple: 8 to 10. Camelford: 6. Chester: 6. Crewe: 6. Congleton: 6. Dartmouth: 1s 7d to 1s 8d per dozen. Derby: 6. Helmsley: 7 and 8. Knutsford: 6 and 7. Leyburn: 7 and 8. Lincoln: 7. Lostwithiel: 12. Macclesfield: 5 and 6. Nantwich: 7. Northwich: 6 and 7. Otley: 6. Redruth: 1s 4d per dozen. Runcorn: 6. St. Austell: 6. Stamford: 5 to 7. Stockport: 6. Tavistock: 6 and 7. Totnes: 1s 8d to 1s 9d per dozen.

Saturday.—Appleby: 6 to 7. Berwick: 1s 6d to 1s 8d per dozen. Bridgnorth: 7. Carlisle: 5 and 6. Doncaster: 7 and 8. Grantham: 7 and 8. Howden: 6 to 8. Ipswich: 6 to 8. Lancaster: 6 and 7. Malton: 9. Pontefract: 7. Retford 2s 8d to 2s 10d per score. Richmond (Yorks): 5 and 6. Skipton: 6 and 7. Stokesley: 6 and 7. Whitby: 5 and 6. Worcester: 6. York: 6.

WET GRAINS.

London, Saturday.—Wet grains: Prices remain firm at 21s to 22s 6d ale, and 17s 6d to 19s porter per ton. Wet distillers' grains are firm at 32s 6d per ton. Pressed white distillery meal 35s per ton. Dried grains without change; ale 102s 6d, mixed 97s 6d, and distillers 115s. These are relatively the cheapest feed obtainable, as they have not advanced the same as other feeding stuffs, being about the same prices as last year. Dried distillery meal, containing 45 80 per cent. oil and albuminoids, without change, 117s 6d per ton. All the above are free on rail London.—HAMLYN AND CO., 37 and 38, Mark Lane, E.C.

COLONIAL DAIRY PRODUCE

London, Friday.—Butter: The market for Australian butter continues strong and prices are well maintained at last week's figures, with an occasional advance. There is more than the usual proportion of unsalted butter in the latest arrivals from Australia, and, consequently, prices of this kind have fallen virtually to a parity with salted. Continental prices remain firm, and the Danish market shows an improved inquiry. It is worthy of note that for the first time the Copenhagen official quotation has fallen two weeks in succession without affecting the price of Australian and New Zealand in British markets. This is the more remarkable as the Danish decline amounts to 5s 6d per cwt. Supplies of Siberian were larger this week, but the bulk of the butter was from the cold store at Riga. No arrivals of Argentine took place, and the market remains firm at 112s to 114s for "choicest." Cheese: There has been a good market for Canadian at an advance of 2s per cwt. on the week, "choicest" parcels of white making 61s to 62s and coloured 62s to 63s per cwt. on the spot, and c.i.f. quotations are even higher. With these high prices there is a very great inducement for the production of fodder-made cheese wherever possible in Canada between now and April, 1906.—W. WEDDEL AND CO.

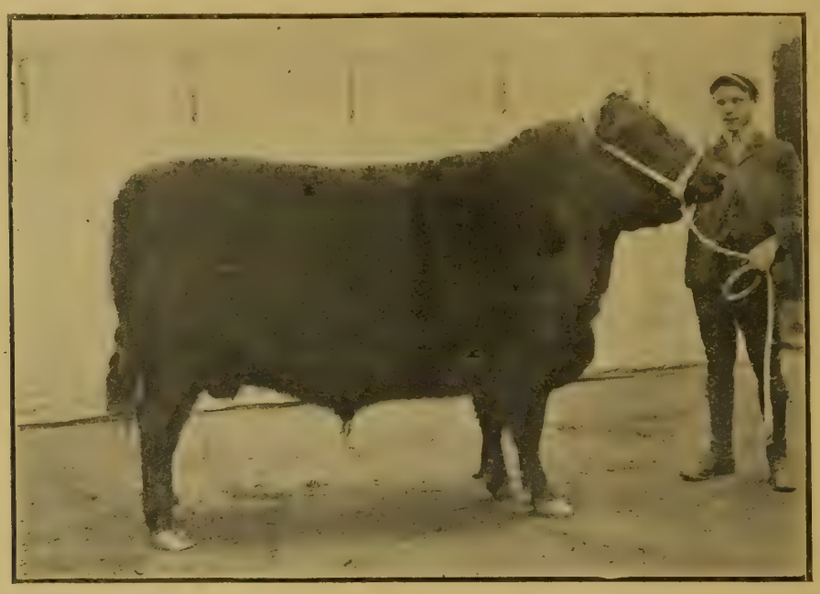
MANURES.

Liverpool, Friday. — Nitrate of soda is firm and quoted at £10 17s 6d to £11 2s 6d per ton for ordinary to refined, according to quality; prices which are on parity with this date last year. Kainit is attracting more attention and likewise basic slag, and they are in fair seasonable demand at the quotations. Feeding stuffs are a firm market all round, but the consumptive demand rules slow, which is ascribed to the higher range of prices caused by the increased values of importations and the necessarily higher cost of home productions, owing to the higher prices paid for the raw materials, whilst not a few consumers are utilising their barley and wheat, as they are both cheap this season. Fair sales of prime American feeding treacle and crushed cottonseed at present moderate quotations. Fattening cake, prime Liverpool make, in bags, £7; feeding or dairy cake, prime Liverpool make, in bags, £6 12s 6d; nitrate of soda, best quality, i.e., guaranteed 95 per cent. pure, in bags, £10 17s 6d to £11; bone meal, Monte Video, prime, in bags, £5 2s 6d to £5 7s 6d; kainit, prime 23 per cent. sulphate of potash, in bags, £2 to £2 2s 6d; palm nut cake, prime, in bags, £5 15s; linseed cake, American thin oblong, prime, but hard, in bags, £8 5s to £8 7s 6d; ditto English, prime, in bulk, £8 10s to £8 17s 6d; linseed meal (pure crushed linseed), prime, in bags, £14 to £15; cottonseed cake, N.A. decorticated, good, ordinary, in bags, £7 5s to £7 7s 6d; ditto English decorticated, prime, soft, in bags, £7 15s to £7 17s 6d; ditto English undecorticated, prime, in bulk, £4 13s 9d to £5; cottonseed (crushed), 20 to 25 per cent oil guaranteed, prime, in bags, £7 to £7 2s 6d; maize germ meal, prime, in bags, £6; corn oil cake, 10 to 13 per cent. oil, prime, in bags, £6 2s 6d; rice meal, Rangoon, as imported, in bags, £5 5s to £5 7s 6d per ton; linseed, fine bold feeding, in bags, £2 7s 6d to £2 8s 6d per qr. 416lb.; cod liver oil, cattle feeding, prime, in casks, 4s 6d per gallon; treacle, feeding, prime, in barrels, 4s 6d per cwt.; D.N.S. brand superphosphate of lime, guaranteed 25 to 27 sol., in bags, £2 to £2 2s; ditto ditto guaranteed 30 to 31 sol., in bags, £2 5s to £2 7s; ditto ditto, guaranteed 35 to 36 sol., in bags, £2 15s to £2 17s; basic slag, prime quality, guaranteed 30 to 35 per cent. phos., in bags, £1 11s to £1 13s; ditto prime quality, guaranteed 38 to 45 per cent. phos., in bags, £1 19s to £2; ditto finest quality, guaranteed 42 to 50 per cent. phos., in bags, £2 1s to £2 3s per ton—at depots inland.

Live Stock Record.

POPULARITY OF THE SMITHFIELD SHOW.

We have had another highly successful Smithfield Show, and the prospects of that time-honoured popular institution, the Smithfield Club, are better than ever. At the annual meeting last week, H.R.H. the Prince of Wales was elected president for the ensuing year, and Lord Winterton, in making the motion to that effect, truly observed that the Royal Family had always taken the greatest possible interest in the welfare of the Club, as well as in the promotion of agriculture generally. The annals of the Club afford ample evidence of such being the case, for it is recorded in the minutes that H.M. George III. was a very early exhibitor, and the visit of Queen Victoria, in company with the Prince Consort, and of the latter with his two sons, then very young, are prominently recorded. There cannot be the slightest doubt that H.M. the King derived the keen interest he takes in live stock, and his likings for so many kinds of farm animals, very early in life from his illustrious father. Great results have sprung from this source. The sums of money invested in stock-breeding, and even in procuring and fattening famous animals for the Christmas fat shows by our nobility, estate gentry, and millionaires, that they may follow the example set by the King, would amount to a stupendous total were it reckoned up, and the greater the trend that way, the more are our tenant farmer breeders and the general interests of agriculture benefited.



Aberdeen Angus Steer BLACK PRINCE, First Prize Steer over 2 and not above 3 years old. Exhibited by Mr. J. J. Cridlan, Maisemore Park, Gloucester. Age, 2 yrs 9 months 3 weeks 4 days. Weight, 15 cwt. 3 qr. 4 lb.

But the main cause of the great success of the Smithfield Club, and the continuous prosperity of its shows, must be looked for in another direction, namely, the readiness of its Councils to move with the times, and effect changes as soon as proofs were afforded of their being absolutely necessary. They have been popularly elected by the members themselves, and, consequently, abolished oxen classes after farmers in general had abandoned keeping steers until they were six or eight-year-old oxen to perform field work. An oligarchical Council, such as the Royal until recently had, would probably have set their own interests as showmen more than the general interests of the farming community, and it will be fresh in remembrance that very grave fears were harboured by pessimists as to whether the curtailment of the show of those monstrosities of size and obesity, which sometimes yielded a live weight of from 30 cwt. to 35 cwt., would not diminish the number of sightseers. The result has abundantly proved the groundlessness of such fears. The crowding of the Islington hall on Wednesday last in every part afforded convincing proof that the exhibition, chiefly of young animals scarcely full grown, in no respect militates against the popularity of the show. This is, however, only one of the numerous changes which have been effected in recent years. The London butchers made a strenuous demand for carcase prizes and carcase competitions. The agitation set on foot was for object lessons to teach graziers the sort of animals best for the block. The demand was readily accorded, and this supplementary exhibition has now been in existence for several years without affecting the interests of the leading one in the slightest degree. The carcase classes are very interesting and serviceable appendages to the live stock main exhibition, but the animals, to win prizes in them, must be different to the premium ones of the latter.

Scarcely a year passes without some alteration being noticeable in the features of the show, and they have usually been found to be improvements. Certainly the institution of a special class for South Devon steers for the first time last week gave admission to stock the Knights of the Cleaver were particularly keen after. One of the exhibitors said he could have disposed of forty or fifty if he had been in possession of them to offer. The Devon Longwool and South Devon sheep and lambs had hitherto been amalgamated together, but a separation has now been made which has created immense satisfaction, not less, however, than that felt by the Ryeland graziers in having a separation from the Dorset Horn sheep, with which they had very little similarity.

One noticeable feature in the recent show was the large number of heifers in proportion to steers, especially those of the Red Poll, Aberdeen-Angus, and Galloway breeds. A considerable proportion were legacies from the breeding shows, animals which had been victimised by the high-training system. The Smithfield Show has become a last refuge for such, which cannot be helped while breeders are ready to put some of their best animals in jeopardy. The proposition was made some few years since to add yearling heifer classes to the exhibition, but it was not entertained, owing to apprehensions that it would prove injurious, instead of beneficial, to cattle improvement. Another thing strongly advocated by a few, but which the many stoutly opposed not long since, was that no animals should be shown more than once at a Smithfield Show. Although many of the prize beasts are still fed to a much higher degree than is profitable for spending purposes, the abuse in this respect is nothing like what it was some years since.

STOCK AND SHOW NOTES.

By Herdsman.

I am informed that another highly-bred Large White Yorkshire boar has just been sold from Sir Gilbert Greenall's well-known prize-winning herd at Walton Hall, Warrington, for exportation to the Argentine, and was shipped from Liverpool to Buenos Ayres on the 2nd inst., per the David McIvor Line steamship "Araby."

Mr. Ernest F. Jordan, of Eastburn, Driffield, has sold two rams from his flock of Leicesters to Mr. J. E. Davenport, for exportation to New Zealand. The two Leicester shearlings sent out previously from this flock, to the same order and destination, realised high prices, the best ram making 112½ gs., the buyer being Mr. Rhodes, of Tai Tapu.

Breeders of Tamworth pigs are in a peculiar position. A good many years ago their favourite long-snouted, brown-coloured animals went out of fashion a good deal, and consequently fell into the possesion of few individuals. The problem since that time has been to secure change of blood. The Tamworths are regaining favour; but they are plainly too much in-bred, and consequently in danger of losing constitution. It has occurred to the Tamworth Pig Breeders' Society that fresh blood from America would help them immensely. When the Board of Agriculture comes into possession of a new President, the Tamworth men will crave the Board, says the *Glasgow Herald*, to allow American breeding pigs of the red variety to land alive in this country. The answer of the coming Minister of Agriculture will be awaited with great interest by more than the upholders of the Tamworths. With quarantine regulations, there is no reason why breeding animals from a reasonably safe country should not be admitted to Britain. The first piece of business, of course, requires to be an Amendment of the Act of 1896, which enforces slaughter at our ports of all meat-producing animals from abroad.

H.M. the King's Southdown Sheep, winners of the Championship for the Best Pen of Short-woolled Seep or Lambs, and the Prince of Wales's Challenge Cup for the best pen of Sheep or Lambs bred by exhibitor. Bred at Sandringham; age 21 months; weight 6 cwt. 0 qrs. 6 lbs.

THE SMITHFIELD SHOW.

An Aberdeen-Angus Champion.—His Majesty wins Challenge Cup for Sheep.

CRITICAL REPORT AND PRIZE LIST.

The 107th show of the Smithfield Club which closed on Friday last was one of the most successful ever held by that body. His Majesty the King visited the Agricultural Hall on Monday afternoon, making a rapid survey of the exhibits in the various sections. The attendance during the week of the paying public was also large, and in the afternoons, and evenings especially, the gallerie were somewhat inconveniently crowded. In the following pages will be found a critical report of the various sections, together with a complete list of prizes.

The Championships.

With so many new comers in the ring, the great trophies of the day at Smithfield became very early one of the great themes of the day. The Midland champion had been universally appreciated as an admirable champion the previous week, and was again first favourite with most ringsiders, but the Edinburgh champion heifer, it was also seen, would be a formidable competitor, as also the Royal Shorthorn Madeleine, as she had been at Birmingham. The first honour, however, to be decided was that for best beast not exceeding two years old; this, as at Birmingham, went to Mr. R. W. Hudson's beautiful cross-bred heifer, with Captain Townshend's first-prize Shorthorn steer as reserve. Next came the competition for best ox or steer in the place, and here, it seemed to the public, a great variation of opinion took place, for the judges favoured Captain Stirling's first-prize aged Shorthorn for this trophy and Capt. Townshend's younger steer for the reserve, thus depriving the Royal Hereford of a chance for the main honours. Seeing the slight difference in weight, and the very superior quality of the Hereford here, the decision was hard to understand. Next came the competition for best female, and here matters were very close between Colonel McInroy's Aberdeen-Angus and H.M. the King's Shorthorn; the powers of the Scottish judge and the Scottish heifer, however, prevailed, and so the Angus carried off the cup and the Shorthorn the reserve, these two being similarly placed for the entire championship of the show.

Devons.

There were some alterations made as regards the Bingley Hall decisions in the classes for Devons. The Red Rubies of the West enjoy a fine reputation for making some of the best beef that graces the dishes of the London epicure, and the fame of the breed was well sustained by the classes in the Hall at Islington in the class for steers not exceeding two years. The Hon. Claud B. Portman must have regretted that he has replaced the Rubies by the Roans when he saw his steer advance from reserve at Birmingham to the lead of its class at Islington. Farewell is a fine steer with a good sirloin, and has mellowed on its travels, having lost that hard touch which was so characteristic of it at Bingley Hall on judging day; second to it came in Curley, a steer sent by Mr. Thomas Kidner from Halvergale Hall, Norwich. This steer was bred by Mr. Abraham Tribble, Holsworthy; it is long, and growing a trifle weak behind the shoulder, but has excellent butts, and should come out well another year. As third came in Viscount Portman's Reggie, that was first at Birmingham. This steer did not retain the form of Bingley Hall, having gone quite soft, and its end was not a trifle more attractive than the reference we made to it last week. The Earl of Cawdor was reserved with Stackpole Klondyke, a long, straight, useful steer, not over done, and evidently only sent up to qualify for another year. A commended card went to the Earl of Rosebery's Togo, which was second at Bingley Hall. The other commendation went to Mr. J. C. Williams, with a rather light-boned steer sired by Drosera. The older steers were one less in number than the youngsters, and here another notable reversal took place, the Earl of Rosebery's Nelson, a fine lump of beef that handled well and was worthy of its position subsequently as the winner of the breed cup. It had the meat where it was wanted, and should show a fine carcase; second to him was placed its Birmingham rival, the King's steer sired by Quantock Bridegroom, that is not quite so straight as the other, but still has a lovely rib and presents a fine broadside view, but handles for a thick spine; third prize went to a steer sent by Lord Calthorpe, that was soft and lacked a sufficiency of bone to support its weight. The reserve went to Mr. George Risdon, Dunster, Somerset, with a big steer that was recently put second at the Dunster fat stock show; it was a good specimen, right away from the wild red deer country. Mr. Edgar F. Case also sent up a good steer whilst in its native county of Somerset, but scarcely strong enough for historic Smithfield.

The heifers made a class of four, and each was worthy of the honour bestowed upon it. His Majesty the King was well to the fore with Dewdrop, that should cut one of the best sirloins in the show; she was straight, and handled with that fine touch of mellowness so much sought after but so seldom attained. Second went to Mr. J. C. Williams's Blooming Cow 19th, that filled the eye well, being very square, but with a decidedly small neck. The third prize went to Lord Calthorpe, with Miss Lyddon 7th, that was very kindly to the touch, had a nice back, but did not finish well at the end. The reserve went to Viscount Portman's Fossie, a nice, well brought out heifer, that would have stood higher had her back been strengthened or levelled up a bit. Taking the classes as a whole, the Devons were quite up to average merit as compared with recent years.

Herefords.

The three classes of this breed were, as they had been at Birmingham the previous week, well filled, and there was little alteration, addition, or detraction from that show. Some of the animals had lost a little more weight than others, and felt the effects of the continued want of rest and the worry accompanying it more than others had, and it is only needless to say where this was the case a little loss of bloom had naturally taken place. Of steers not exceeding two years there were eleven entries—a very neat and level collection, full of quality, and, for age, well matured. The first prize was accorded Mr. Richard Phipps for a son of Locarno, and a half-brother from the same herd carried off the third prize. Their weights were 14 cwt. 0 qr. 23 lb. and 13 cwt. 2 qr. 13 lb. respectively; the former a level-fleshed, deep-bodied bullock, with good finish for his age, and generally first-class quality; the latter also very level in outline and of good breeding and quality, though not quite as good in the scales. These were both bred by exhibitor. The second steer that divided these two was bred and shown by Mr. James Edwards, sired by Carbineer, and of Growe blood on the dam's side. He scaled 13 cwt. 2 qr. 15 lb., and in symmetry and in general aspect and breeding was a close runner-up to the other entry. Mr. W. H. Evans was r. and h.c. for a very smart all-round steer, nor quite as forward as the others, but of best quality and flesh. He was sired by Fusilier. The Earl of Coventry received a c. card for a very useful steer bred by Lord Llangattock and sired by Albion.

Steers above two and not exceeding three years old were quite a remarkable class; for uniformity of quality and breeding one of the best classes, probably, that has been seen at Smithfield, their quality and evenness in the laying on of their flesh being quite exceptional. H.M. the King's splendid steer that had championed the Birmingham show the previous week had little difficulty in getting into his rightful position again here at the front. He had lost a little weight in travelling, nevertheless his bloom and handling were well retained, and his wealth of flesh, quality, and general breed appearance were of the highest. Mr. Peter Coates came in second with a grand steer of his own breeding, sired by Q.C. A famous back, good bottom line, and fine quality, well-finished, he well deserved the second place. He is 15 cwt. 2 qr. 16 lb., being some nearly 2-cwt. lighter than the winner from the Royal herd. Mr. W. H. Cooke's third is also an exceedingly fine steer. He was bred by exhibitor, and sired by Centurion, and in weight is considerably heavier than the second prize one. A second entry of Mr. Coates's was r.; and a good entry from the Croome Court herd c. Females were a small entry, only three being shown. The Hon. F. G. Wynn's Bodvean Primrose, a rather medium-weight heifer, but even in flesh and shape, sired by Union Jack, was first, H.M. the King's Sophia second, and Lord Coventry's Golden Fairy third, the breed cup being accorded to H.M. the King's steer, and the r. to the Hon. F. G. Wynn's heifer.

Shorthorns.

The entry of this breed, which had stood out so conspicuously at Birmingham, was again quite exceptionally good, as most or all of the Midland contingent were in their places, and a somewhat strong reinforcement from the Edinburgh Show had taken place. In steers under two years old—quite a wonderful class for quality—considerable changes took place from the Birmingham awards, H.M. the King's very compact and good-fleshed steer by Royal Duke that had been first in the Midlands, though in his usual good form, failed to please the judges, and was put down to the third place. Captain H. L. Townshend's steer—second at Birmingham, bred by Mr. Finlay Munro, and sired by Maxwell—being now at the front. He certainly was a close competitor the previous week, and it was no surprise that in London he should rise a place. He is a steer of capital quality, shape, and breeding. The second place, however, being filled by a steer of Lord Tredegar's that was outside the money in the Midlands, and of not too good pattern in his hind quarters, was rather difficult to understand. Mr. M. C. Williams's red and white, a soppy, useful steer, was given a fourth prize, and a steer of Mr. John Ross's r.; h.c. and c. were also accorded to very good steers of Lord Calthorpe's and H.M. the King's.

The older steer class was quite a much better one in London than in the Midlands. At the latter show this was decidedly the weakest sec-

tion of the Shorthorns, but the addition to the class of two such steers as were contributed by Captain A. Stirling and Mr. H. S. Leon, gave a much better general aspect to the class. The former of these steers had been at the Edinburgh show, and was bred by Mr. Finlay Munro, and the get of Maxwell. He has a well-covered top, thick of flesh, and handles fairly well, with good bottom line and general appearance; his weight in London was 17 cwt. 3 qr., and he was given the first prize. Mr. H. S. Leon's steer, placed second, was bred by exhibitor, and sired by Conservative; he scales 17 cwt. 2 qr. 11 lb., but a slight difference from the first prize one. He has good flesh, handles well, and shows good breeding, his hind quarters, too, are very full and level in the back. He is a little inclined to droop, otherwise a fine steer. Sir John Swinburne's steer that had been in the back in the Midlands was now third, and H.M. the King's white steer r., a c. card being dealt out to Sir Oswald Mosley's massive beast. Heifers were also a very good class. H.M. the King's Madeleine well held her own; her compact shape, great weight, and superb quality quite kept her at the top. Miss Alice de Rothschild's Waddesdon Butterfly, third at Birmingham, now advanced a place, a very level capital-backed and ripe heifer; and the third place was allotted to Lord Tredegar's Lady Llangibby, a very useful heifer of Mr. James Graham's being r. The breed cup of this section was awarded to the Royal heifer, Madeleine, and the r. to Captain Stirling's first prize aged steer.

Sussex.

Three of the steers which had been entered in the junior class were absentees, but ten remained to make a truly imposing display, for they were a prime collection, six of them over 13 cwt. each live weight, and the one belonging to Mr. W. F. Winch was by far the heaviest weight yearling in the hall, as although under twenty-three months, he pulled down the scales to 14 cwt. 2 qr. 25 lb., yet so compactly built and level was he that no one would by casual inspection credit him with any such scaling. The first-prize yearling of Mr. J. Aungier, at a little over this age, scaled 13 cwt. 3 qr. 20 lb., which was the next heaviest. He had remarkable and nice character, no less than substance, and his level form has very thick coating. Mr. J. Godman's second prize steer scaled just 13 cwt., and also displayed excellent quality. Earl Winterton's was another yearling of broad massive build, which possessed so much merit that a fourth prize was awarded him. There were no absentees in the senior steer class, and ten were in competition as before. They were of such merit that the class generally was commended, after four prize-winners and a reserve had been selected. The Earl of Derby came to the show with a son of Diploma, very broad, level, and well covered on his top, and of good substance, his scaling being 17 cwt. 2 qr. 14 lb. His lordship had a second very good steer to be reserve; the second prize being awarded to Mr. W. G. Fladgate's handsome thick-fleshed one, and the third to Mr. Winch's, which weighed 17 cwt. 3 qr. 27 lb. Mrs. Montefiore had two remakably good ones, to one of which an extra prize was awarded. But the heifer of Mr. Gerald Warde was considered to be the best Sussex beast, and received the cup as such. She seemed full and ripe as a plum, and the other two heifers which competed with her belonging to Mr. Braby and Mr. Saillard, had level nice conformation likewise. Indeed Tutsham Pearl, Drungewick Queen, and Bessborough Winch 4th have all been met with at the summer shows.

Red Poll.

Four Red Poll yearling steers competed, and Sir W. Corbet's was selected for first prize, one which carried a good middle, and, with the exception of being a little faulty at tail, had symmetrical build. The Right Hon. A. E. Fellowes, M.P., secured the second premium with a heavy-fleshed one, shapely, except at the rump end. Mr. R. P. Cooper's third prize steer, neat and of less size, possessed nice quality. He was three months the junior of the first winner. One of the four which had been entered in the senior class was absent, but there was admirable representation, and Sir W. Corbet's shapely son of Red Knight not only received first prize, but the cup. He had level conformation, well-covered with rich flesh. Mr. Fellowes, M.P., had again second prize with a steer which did not handle quite so well as Sir W. Corbet's, but was admirably covered. Mr. R. J. Thurman's third prize was of larger scale, but not quite so noteworthy for chaste welding and quality, was a good butcher's beast. There were seven heifers, most of them show-yard ones, which, through training had lost the breeding function. Amoret, from the Horningham herd, won first prize; Mr. Cooper's Ashlyns Gravel coming next, and then Mr. Hammond's Davy 209th, and Sir W. Corbet's Acton Coral. Sad was it to find these shapely heifers going for beef when they should have been fruitful in propagating their kind.

Aberdeen Angus.

This breed was remarkably well represented at Islington this year. It is seldom, taking the classes all through, that a better lot are to be seen. Though the pick of them have perhaps been a little superior upon one or two previous occasions, the general level, the tail of the classes, has seldom or ever been as good; and there was a large entry, a good number being added from the Edinburgh Show. Steers not exceeding two years old come first, and these were a very good quality and shapely lot generally. Mr. R. W. Hudson's steer, bred at Danesfield and first at Birmingham, again held that position, a very straight-topped steer, and of good breeding and general quality. Mr. Robert Turner, from Portsoy, provided the second winner, a thick-backed, good, level steer bred by Mr. Stewart and sired by Veteran of Preston; he scales just 13 cwt., and is capital beef. Mr. J. H. Bridges filled the third place with a steer bred at Langshott and sired by Leponito of Careston, a level top and bottom boned one, with good flesh and quality; he is rather lighter in weight than some of them, but a very taking steer. H.M. the King's Abergeldie herd contributed two very fine entries, both bred by His Majesty, and sired by Elandslaagte; one of these was awarded fourth prize, and the other reserve and an h.c.; the former is particularly clean in his outline and breeding, one of the best steers in the class in this respect, and his weight is very good, too—12 cwt. 1 qr. 9 lb. Mr. J. J. Cridlan, Mr. J. C. Williams, a second entry of Mr. J. H. Bridges, and one from Mr. George Bruce's herd were all honoured with minor cards. Steers above one and not exceeding two years old were a small class numerically, and though producing some excellent beef animals, there was nothing of outstanding beauty in other respects. Mr. J. J. Cridlan's Black Prince by Junic, bred by Sir James Duke and second in the junior class last year, was just as he had been in the Midlands the previous week; he scales in London rather lightly for his size—15 cwt. 3 qr. 4 lb.—but he is very thick of beef, and an all-round good steer apparently for the butcher. Mr. R. L. Batchelor carried off second prize with a good shaped and capital handling steer by Darlington; he, too, is none too heavy. Mr. R. W. Hudson's third is also a ripe good bullock; like Mr. T. B. Earle's reserve, he was sired by Equerry of Ballindalloch, and is also a generally good sort of beast for the butcher.

The heifer class was the brightest portion of the Aberdeen-Angus section; this was an admirable class of some eleven entries, and, amongst others, provided the champion of the entire show; this was Colonel Charles McInroy's Baron Bellona, bred by exhibitor and sired by Ben Vrachie; she had been champion of the Edinburgh Show the previous week, and though we have seen better-finished champions in London, she fills the eye from symmetrical point of view as well as in breeding, is a particularly neat heifer, and well filled in the hind quarters, and with perfectly level back; at the back of shoulder she may lose a little, but is otherwise a fine heifer, and her weight—16 cwt. 1 qr. 1 lb., at under the limit of age—is satisfactory. Mr. R. L. Batchelor was second with Gay Lass of Greatham by Quinto, bred by exhibitor, a very ripe and good handler, and with capitally covered back. Mr. J. T. Stanford's third, Birdie of Rutherstock, a heifer of fine shape and quality sired by Santoy was third; she is a little on the light side; a fourth prize was given to Captain H. L. Townshend's Oma 5th, another very neat and ripe one; the reserve went to Mr. Thurman, and c. cards to Mr. J. H. Bridges and Captain Stirling completed the class, the breed cup going to the first-prize heifer.

Galloway.

Six yearling steers of this breed gave three prize-winners of considerable merit, and the others secured barren honours. Mr. Robert Graham won the first premium with Betty 2nd, of a singular colour—red-roan belted with a saddle of white, and, being shapely, he had a handsome appearance. Captain Stirling's Allanwater, with his curly coat, was also attractive. The third prize winner had neat, shapely character. There were some older steers, at the head of which Mr. Alfred Palmer's Character, with a straight, deep, well-coated form appeared; Mr. R. Graham's Rodger, although not quite so weighty, making an excellent second; and Sir J. Swinburne coming third with a full-shaped compact one, which fell off slightly at the rump-end. The heifer class was largest of this breed also, and its prima donna came to the front as cup-winner. This was Mr. David Brown's Esmee of Stopford, of a deep, broad, level, form, well covered with nice flesh. Mr. R. Graham's Fairy Queen was second, winning by a full expansive middle but not quite so scaly as the first winner. Mr. Alfred Palmer's Meg secured the third premium, which, like Fairy Queen, excelled in her middle-piece, and indeed was slightly the heavier of the two. Sir J. Swinburne's Gladsome Lady and Mr. A. Palmer's Heatherbell had barren honours.

Welsh.

As usual, the muster of the black cattle of the Principality was a large one, and only one of the twenty-seven animals entered failed to appear. In the steer class under two years appeared several weighty ones, displaying how admirably the breed, as improved, is adapted for early maturity. Mr. W. Hughes won first prize with one not so heavy as two or three of the others, but exceedingly level and nice in flesh. Mr. R. M. Greaves's second winner was nearly two months the senior of the first winner, but very much heavier, as he pulled down the scales at 14 cwt. 1 qr. 8 lb.; in fact, his form is grandly covered, and there is no coarseness worthy of notice. The third winner was Mr. R. Roberts's Cymro, so that the awards coincided thoroughly with those at Birmingham.

In the two year-old steer class, likewise, Mr. Greaves was first with the same animal as was at the top at Birmingham. He unites quality to substance admirably, is richly coated over the back and ribs, with a fulness seldom seen over the crop and at the shins. He made an admirable cup winner. Mr. W. Evans's Twm, the heaviest in the class, was not at Birmingham. He has length as well as breadth and depth of form, and was a firm handler. His weight at 2 years 11 months 2 days was 18 cwt. 3 qr. There was a reversal of the Birmingham decision in Mr. T. Roberts's Glanrafwr Boy being preferred to Gorlleg, shown by the Coed Coch Trustees, the former being third and an extra prize being awarded to the latter. Five heifers competed, two of which belonged to Mr. Greaves, who won first and third prizes with them; Mr. R. Hughes's Queen obtaining second premium, which was exactly confirmatory of what was done at Birmingham. These three heifers, and Mr. R. Roberts's Sally, displayed very compact, full-shaped forms, they, like those of some other breeds, having been summer-show animals.

Highland.

The picturesque cattle of the Scotch hills, with their broad antlers and shaggy coats, made a formidable display, being in good muster. There were eight steers not exceeding three years, and a first winner was found in Sir W. Ogilvy Dalgleish's Errol Candidate 4th, handsome in style, yellow coated, and with good flesh. Sir J. Gilmour furnished the second winner; and the light-brindled and dark-brindled steers of H.M. the King had third prize and reserve. In the oxen class, which had the same number of entries, a handsome yellow, grand-looking animal belonging to H.M. the King, was preferred to all the others. The Earl of Southesk's Buller, red in colour, of compact form, being second, and his Shellay third. The two four-year oxen of the Earl of Durham were by far the heaviest. Sandy scaled 17 cwt. 3 qr. 9 lb. Two of the five heifers were from Sandringham, belonging to his Majesty. They displayed shapely form, but preference was given to Sir W. Ogilvy Dalgleish's Lass o'Gowrie for first prize, the weightiest in the class. Mr. W. J. Nimmo won third prize, and divided the Royal heifers.

Crossbreds.

There was once more a large and excellent display of these cattle in each of their four classes; their general quality was very good, and though there were perhaps none of outstanding weight, the generally level flesh as compared with the patchiness that prevailed a short time ago, their compact build, shortness of leg, and fine quality caused them to give a very favourable impression all round.

The younger steer class was a much better one than that of the same age the previous week in the Midlands. There were thirteen entries; amongst these two or three new comers that were of good outline and quality and helped much with the general appearance of the class. Mr. John Ross of Merkle Tarrell provided both the first and second winners in a couple of Angus and Shorthorn crosses of good size, scaling 12 cwt. 2 qr. 4 lb. and 13 cwt. 0 qr. 5 lb. respectively, and thick-fleshed, well brought out steers, good in their outline and character too. Mr. Robert Turner's third, also of Shorthorn and Angus cross, followed the others very closely; he is a steer of beautiful quality, wealthy flesh, and deep, well ribbed body—altogether very pleasing. The fourth prize went to Mr. R. W. Hudson's Danesfield Blue Boy, another very heavy-fleshed one, that had done well at Norwich and Birmingham. The Earl of Durham, Captain Townshend, and Mr. C. F. Raphael were each accorded minor honours.

Steers above two and not exceeding three years old had an entry of thirteen animals; Mr. R. W. Hudson's admirable steer that championed the male section at Norwich and the cross-breds at Bingley Hall had so far retained his form as again to be able to come to the head of affairs in his class, and also to carry off the cross-bred cup. Mr. T. B. Earle's heavy-fleshed and thick, level steer of Angus and Shorthorn cross was placed second, and the Earl of Durham's, also of the same cross, third, a deep, thick, sappy bullock, and well

covered all over with capital roasting beef. Sir John Swinburne was second, and an h.c. gain to Mr. George Bruce, which completed the class.

Cross-bred heifers under two years of age came next; the entry in this class was not quite so strong, but eleven entries being catalogued. These, however, included several heifers of exceptional shape and quality, altogether good of their age. Mr. R. W. Hudson's Danesfield Honey Bee, that had been first in the Midlands the previous week, and also carried off the champion prize as best beast under two years bred by exhibitor, was again at the front. She had lost nothing in her beautiful general appearance and quality, and in symmetry, as was said of her previously, she is most perfect; her breeding is Aberdeen Angus and Dexter, and her scale now 12 cwt. 3 qr. 14 lb., very good indeed for her age. Danesfield Ruby Lass from the same herd ran in fourth. She, too, is remarkably symmetrical, and with thick and good covering of flesh. Mr. John Ross secured the second place with a very sweet heifer in shape and quality, but rather on the light side; and Miss Alice de Rothschild's Waddesdon Primrose, a fine quality, thick fleshed, and well shaped roan, second in the Midlands, was placed third. The reserve card went to Mr. W. J. Robertson, h.c. to Mr. G. F. Stanford, and c. to a second entry of Mr. John Ross.

Heifers exceeding two but not over three years old were a very strong class both numerically and also in point of quality. Mr. T. Learner's Norfolk champion, and first at Birmingham, was once more first in her class. As said of her previously, she has a capital top, but her weight is scarcely as good as it should be; still, she well held her position. Sir John Swinburne came second with a very thickly covered black and white of Galloway and Shorthorn cross, a ripe, compact heifer, and good in symmetry; she is but two years and

Small Cross Bred.

The steer class under two years had four in competition, headed by a steadily deep black belonging to H.M. the King, which was an Aberdeen-Angus Dexter. The Shorthorn-Dexter brought from Ireland by Mr. Nash was given the second prize; whilst Sir W. Gilbey was third with a cross similar to the King's winner. In the class for older steers Mr. Nash came to the front with a very neat, nice specimen of the Aberdeen-Dexter, Mr. Michael Rogers getting the second premium with a white Shorthorn-Dexter of much larger scale. There were seven heifers, and a very classic specimen of nice character, Mr. Hudson's Danesfield Little Jap, of the Aberdeen-Dexter cross, carried off the Cup as well as first prize. Mr. de Bertodano's La Mancha Dodo obtained the second prize, and his La Mancha Dainty was reserve. Mr. Nash bringing from Ireland Lucan Lily, a Shorthorn-Dexter, to win the third premium.

Appended is a table showing the average daily gain of the prize-winning animals :—

Exhibitor and Breed.	Age.	Weight.	Average Daily Gain.
DEVONS.	Days.	lbs.	lbs.
(Steers not exceeding 2 years old.)			
1 Hon. C. B. Portman (Farewell) ...	654	1,231	1·88
2 Mr. T. Kidner (Curley) ...	652	1,373	2·10
3 Viscount Portman (Reggie) ...	703	1,248	1·90
(Steers over 2 and not exceeding 3 years.)			
1 Earl of Rosebery (Nelson) ...	974	1,807	1·85

3 Mr. Brooking Trant (Best Man)...	872	1,839	2·03

Galloway Heifer, Esmee of Stepford, Winner of the Galloway Breed Cup and First Prize. Bred and Exhibited by Mr. D. Brown, "Stepford by Auldgirth" Dumfrieshire. Age, 2 years 11 months 3 weeks 1 day. Weight, 13 cwt. 3 qr. 5 lb.

seven months old, consequently at a disadvantage in this respect. The Earl of Durham provided a famous thick, well-finished heifer in his blue-grey Rose for the third place. She was one of the heaviest heifers in the class, being 14 cwt. 3 qr. 26 lb. Mr. G. F. Stanford was fourth with a deep, good heifer by Santoy that scaled 15 cwt. 2 qr. 12 lb. A very nice-topped heifer, and lengthy, with good handling, shown by Mr. Alexander Smith was third; and an h.c. to Mr. Stewart, c. to a second entry of the Earl of Durham's, and c. to Mr. W. J. Fladgate concluded this class.

Kerry and Dexter.

Six animals appeared in the class for steers under two years, headed by the King's fine, deep, full-shaped Dexter, by far the largest and weightiest in the class. This was a black, but his Majesty also won the second premium with a red one; the Duchess of Devonshire coming third with Compton Durban. In the class for two-year steers Mr. R. W. Hudson could not be denied the first premium for Danesfield Jim; the Duchess of Newcastle's Hardwick Jack, of the Kerry breed, was the heaviest, and he received second prize, the third going to the Duchess of Devonshire's Compton Dobbin; the curiously-coloured Cowbridge specimen of Mr. de Bertodano being reserve. In the heifer class Mr. Hudson won another first with Danesfield Jill, larger and heavier than any of the others; Cowbridge Little Nell, belonging to Mr. de Bertodano getting the second premium, and Sir Walter Gilbey's La Mancha Braw Lass the third. This

SHEEP.

The sheep entry was, in the aggregate, slightly less than last year, but the merit of the exhibition as a whole was first class. The leading pens of the several breeds are dealt with below under the several headings.

Leicesters.

This section was arranged as in previous years, viz., for Leicesters or Border Leicesters, but none of the latter were exhibited. Mr. E. F. Jordan, with two first-class pens of wether lambs, took first and second honours. These were well developed lambs. They handled well, and were ripe. Mrs. R. Perry Herrick was third and reserve with a couple of very fine pens of lambs. In the wether class, Mr. Jordan was first and second again. His pen of wethers was of a very superior type and character, quite one of the best pens we have seen in this section for some years. The Breed Cup and its r.n. went to the two first-prize pens of Mr. E. F. Jordan.

Cotswolds.

Mr. W. T. Garne was the only exhibitor in these classes. He sent four pens, two in each class, and why it is we do not know, but whether it was a mistake in booking the award, or whether it was by oversight on the part of the judge, there is no question but that the better pen in each of the classes was placed r.n. and not first, as should have been the case. The best pen was very typical of their breed, well fed, well brought out, and of good quality.

Lincolns.

The lamb class was a very good one, and even in its merit and quality. Messrs. S. E. Dean and Sons won first honours here with a very choice pen indeed, having grand backs and specially good flesh. Mr. Henry Dudding took second honours with a level, evenly matched, and most typical pen of sheep; but that pen which filled the third place in the award list, exhibited by Mr. W. B. Swallow, had hard luck in not at any rate going to the second place. The wether class found, as have been the case for the past three years, a pen from Messrs. S. E. Dean and Sons at its head. This was a very superior pen indeed. They were wonderfully perfect in type, formation, and flesh, as their subsequent success undoubtedly proved; especially fine and typical pen from Mr. H. Dudding took the second prize. They were a choice pen of sheep and well matched. Mr. F. Ward, whose entry into the Smithfield contest is welcome, secured the third prize for a very nice pen of typical sheep. They were hardly so heavy as some of the other pens, but they did credit to the flock from whence they came. Messrs. Dean were winners of the Breed Cup with their first prize pen of wethers, and reserve for the same honour with their pen of lambs.

Kent or Romney Marsh.

The lamb class was one of very superior merit all through. The winning pen that came from Mr. T. Wotton's flock was of special quality and high merit, and in awarding to it the Breed Cup the judges recognised its high merit and quality. The second prize went to a very evenly matched and well-fed and typical pen from Mr. H. Rigden's flock. These lambs were of a very superior quality indeed, and they were made r.n. for the Breed Cup. The wether class was one of superior merit. Mr. J. E. Quested won first honours; some question the correctness of this award, but the great scale and size of these sheep, coupled with their grand appearance when out of the pen, offered full justification for their position in the class. Mr. F. Neame took second honours. His was a pen of very superior merit, good in their flesh, well let down, and even in type.

Devon Long Woolled Breeds.

This section has been sub-divided since last year, and the above breed allotted a single class for its wether lambs. There were four entries, and Mr. F. White won first and second prizes with two pens of specially good merit. The other section was for the South Devons, and in its lamb class only one entry was made, but this was a pen of very special quality and high merit, owned by Mr. A. C. Hall, the merit of which was sufficient to justify its winning the Breed Cup.

Cheviots.

Mr. J. McDowall had the class for lambs to himself. His two entries were of a very special merit, and brought out clearly how much more early this breed can be developed by judicious management and proper treatment. The same exhibitor was first and second in the wether class, and also secured the Breed Cup.

Mountain Breed.

Mr. J. MacDowall won in the lamb class with a very deep fleshed pen of lambs, but Sir J. Gilmour, who was second, had probably the better pen of the two. The last-named exhibitor, however, led in the wether class with a specially good pen. These came to hand well, and thoroughly deserved the Breed Cup that they won.

Southdowns.

This year's entry was not so large as it has been during several other years. There was a slight falling off in the wether lamb class in respect to the number of competitors, and also in that for the wethers. The winning pen in the lamb class came from his Majesty the King's lot at Sandringham. This pen were wide and deep in carcase, and although there is room for exception to be taken as to the correctness of the award from the breed standpoint, it can be said that two of the lambs had really first-class carcases of mutton, the third one being not so good a handler. The better pen in the class was that which came in for second honours. How a pen of this merit, with its grand flesh and neat weight, could be relegated to a secondary position is a matter of surprise. Mr. Adeane, who owned the pen, has good reason to consider that he had hard luck in this award. Another pen from the same breeder of rather more scale, but not so choice in touch, secured the r.n. The Duke of Devonshire, with a lengthy and well-brought-out pen, took third honours, whilst the extra fourth prize, awarded on account of the merit of the class, went to Mrs. Montefiore's pen, a pen that certainly met with no more than it deserved, for we found on examination some really good flesh and very nice character. These lambs were hardly up to their best; had they been so, higher honours would undoubtedly have fallen to their lot.

The wether class was a very good one indeed. His Majesty the King secured in it a very notable success. He was first and second for wethers of very prime quality, and not only did his Majesty secure the Breed Cup, but its reserve, an honour seldom achieved. The third prize pen came from the Duke of Richmond's flock. This pen was of the choicest quality, and had the judges adhered to the old Southdown dictum, their neater weight and firmer flesh might have taken them to the top. The Earl of Ellesmere was r.n. for a very nice pen indeed, and the Duke of Devonshire's h.c. pen was well worthy of the notice it secured.

Hampshire Downs.

No breed, taken as a whole, made a better, more typical, or truer representation of its characteristics and quality than the breed now under review. Its lamb class was of very superior merit, and in its winning pen, which came from Mr. James Flower's flock, we found one of the best pens seen for some time. Another pen from the same flock had to be content with third honours. Doubtless the award was a correct one, because this pen had lost its bloom and touch to a slight degree, which accounted for their position. Mr. T. F. Buxton came in for second honours, with a very choice pen indeed. This pen was better under hand than it looked. Sir W. G. Pearce had fourth honours with a wide, deep, and good pen of lambs; they handled well, and came out of the pen well, but they need rather fuller development in the hind quarter, and possibly would have been improved with slightly more length. An h.c. acknowledged the merit of a second entry from this flock, and Mr. H. C. Stephens took r.n. with another choice pen of good merit and type.

In the wether class Mr. T. F. Buxton's pen fully deserved their position at the head of this fine class of sheep. A second entry from and type was first-class. A second entry from the same flock secured a well-deserved h.c. The Marquis of Winchester, who took second honours, is to be congratulated upon the high merit, type, and quality of his very fine pen. Third honours went to a very choice pen from Mr. James Flower's flock, a pen that had outstanding merit from the breed point of view, but were not quite so deep in the flesh as the leading pen. Mr. James Flower's pen of lambs easily won the Breed Cup, and the r.n. went to Mr. T. F. Buxton's wethers.

Suffolks.

The Suffolk breeders were well represented at this show, better than was the case last year. The lamb class, taken as a whole, was a very creditable one indeed. Mr. H. E. Smith secured the first prize with a pen of well-developed lambs that handled well. Mr. D. Abbott Green had to be content with second honours; some would have given them the first place. Had this been so a thoroughly good and well-fed pen would have occupied the leading position.

Small in number but great in quality is a brief but true description of the three excellent pens of wether sheep that made up the class, the first and second honours in which went to Mr. H. E. Smith, for six grand typical Suffolk sheep, the third prize pen being awarded to a well brought pen from Mr. W. G. Hale's flock. The Breed Cup and its r.n. went to Mr. H. E. Smith, the pen of wethers taking the Cup.

Shropshires.

A much better entry was made by this breed than last year. We are pleased to observe that breeders of the Shropshire sheep are realising that it is necessary to secure, at the premier fat stock show of the world, a fully representative entry of their well-known breed.

Mr. R. P. Cooper won first prize in the wether class with a very well-fed pen of sheep, with good quality. He was, however, closely pressed by those two excellent pens from the Executors of P. L. Mills's flock, that under hand gave great satisfaction and disclosed a wealth of flesh and first-class conformation. They were second and third.

The wether class had two entries from the well-known Ruddington flock. These were first and third. They were choice pens of the highest merit, especially the winning pen that secured the Breed Cup, the r.n. for which went to Mr. Cooper's pen of wether lambs. The last-named exhibitor, with a fine pen of sheep, not so evenly matched as the winners, but of very good quality, took second honours.

Oxford Downs.

A small, but very select entry represented this breed. The winning pen of lambs came from Mr. W. H. Loveli's flock. They were good sheep, deep in the flesh, and handled well, but hardly typical of the breed they represented. A better pen by far, from the breed point of view, and quite as good in the flesh, was that which took second honours for Mr. H. W. Stilgoe. Mr. J. T. Hobbs had a couple of entries, but, like many ram breeders who have large demand for rams, had been unable to spare for his wether pens lambs of outstanding merit. However, these pens, which were third and r.n., were fully typical of their breed, and of fine quality. These merits were distinctly seen from that very grand pen of wethers with which Mr. T. Hobbs won first in the next class, and took the Breed Cup of his breed. Miss A. de Rothschild exhibited a fine pen of wether sheep, well fed and evenly matched. These took second in their class, the r.n. for the Breed Cup going to the winning pen of lambs.

Ryelands.

There was only one class offered for this old-established breed, i.e., for wethers. Mr. W. T. Barneby was first and second with two pens of choice wethers, most typical of their breed, and having thoroughly good flesh. Mr. F. E. Gough had to be content with r.n., but his pen, too, was of high merit.

Dorset Horns.

The lamb class for this breed had a very good entry indeed, and the competition was a keen one, Mr. James Toop taking first and third honours with two pens of very superior merit. In fact, the winning pen, to which also went the Breed Cup, was a pen above the average of those that have represented this breed for several years past. The third-prize pen were not quite so good handlers, but still a pen of merit. The same exhibitor was the only contestant in the class for wethers, his pen winning first prize, and taking the r.n. for the Breed Cup.

Cross Bred Sheep.

The class for the lambs in this section was a particularly good one, and the winning pen was one of exceptional merit. Its merit, early maturity, and great development indicated most successful feeding and management. Mr. T. Rush, who owned this pen, has won many notable successes in former years, but this pen was certainly one of the best he has exhibited. His second entry came in for h.c. Second and third prizes were won by two pens from Mr. E. Henty, both of which were square and deep carcase sheep, with very choice flesh and good touch; but the fourth-prize pen from Mr. James Toop could have with justice taken at least third, if not second honours. The latter gentleman was c. for his second pen, and Mrs. Montefiore took a similar honour for her pen, leaving the r.n. for the Earl of Ellesmere, whose pen was brought out in very fine form, with good flesh. Mr. H. C. Stephen's pen, which won leading honours at Birmingham, was accounted by the judges to be unworthy of even a c.: a strange contrast of opinion, and one that cannot be justified, for the two pens which represented Mr. Stephen's flock in this class were pens of undoubted merit and exceptional quality, but not of a cross that was appreciated by the judges.

The wether class was headed again by another of those fine pens sent by Mr. T. Rush, whose second entry received third honours, and might have even gone to the second place. these pens had splendid flesh, and plenty of it. Mr. W. W. Robinson, who was second and r.n. for two pens, was certainly fortunate in securing the former prize; for whilst his pen had great development and depth of flesh, it did not handle with that firmness and evenness that the third prize pen from Mr. Rush did.

The Scotch Cross wether lambs had for their winner a well-fed and good pen of butchers' sheep, the same breeder having the r.n. Mr. A. Smith, who exhibited a cross-bred Lincoln Black-faced

pen, had a pen of marvellously good lambs of very fine quality.

The same competitors competed in the wether class for this section, and their position in the award list was as stated above. The Breed Cup for Cross-breds went to Mr. T. Rush's excellent pen of wether lambs, and the r.n. to the same breeder's pen of wethers.

Champion Prizes.

The contests for the champion prizes were watched with considerable interest. That for the Long Woolled section went, with general approval, to Messrs. S. E. Dean and Sons' grand pen of Lincoln wethers, and the r.n., with equal approval, fell to that first-class pen of Lincoln wethers from Mr. E. F. Jordan's flock.

The Short Woolled champion contest was a much tougher fight, but it resulted this year as it did last year, in the King's pen of Southdown wethers, being preferred before the pen of grand wether lambs from Mr. James Flower's Hampshire Down flock. These, despite their merit, early maturity, and great development had to take the r.n., a position Mr. Flower has occupied for two successive years.

In the contest for the Prince of Wales's challenge cup, his Majesty the King won for the second year in succession with his pen of Southdown wethers, a notable achievement, and one that is not often accomplished. Messrs. S. E. Dean and Sons came in for the r.n., making the

Sir W. Corbet's Steer, Winner of the Cup for the Best Rel-Polled, and First in the Class for Steers of the breed over 2 and not above 8 years old. Age, 2 yrs. 10 months 4 days. Weight, 14 cwt. 1 qr. 7 lb.

third time that these gentlemen have occupied that position during the past three years.

Below we give our usual table showing the average daily gain of the prize winning sheep.

PIGS.

The members of the porcine race this year nearly filled the Minor Hall. But the ventilation was so well arranged that little discomfort was experienced either by the animals or the visitors. The judges got over their work in good time, and there was general satisfaction at the awards. It is very evident that the Small Blacks have now become a breed in name only. But slightly more interest is taken in the Small Whites. This year there were two competitors, and the regulation line, Hon. D. P. Bouverie, was broken up. In the class for small breeds for pigs not exceeding nine months old, Mr. Nathaniel Benjafield was first with nice deep youngsters, so well fed that they could scarcely see out, but they had nice coats and were turned out smartly. This pen also secured the Breed Cup. The Hon. D. P. Bouverie was put second with a very even pair, scarcely so good in their coats. In the older class the Hon. D. P. Bouverie had no opposition, and so he was put first and reserve. They were very even, and had wealthy coats.

The Middle Whites were seen to advantage in the younger class. Here the first prize and the Breed Cup went to Mr. J. A. Fricker with a fine pen of lovely quality and great length, though they were somewhat closely pushed by Mr. T. Simpson Jay, that had length and substance. Mr. Alfred Brown was third, mainly because he has evidently been trying to strengthen the profitable at the expense of the nonprofitable parts of the pigs, and they were not quite so even in consequence. His Majesty the King was reserved with a pen that were not quite in their bloom. There was one more entry in the older class, where Mr. Fricker again scored with two fine pigs, and yet which when out, were not quite a pair, and this accounted for their being placed as reserve for, instead of being winners of the Breed Cup. Second went to capital examples of bacon sent up by Mr. Alfred Brown; H.M. the King being placed third with well-grown picks that lacked finish. The reserve went to non-matchers sent by Mr. E. Henry Loyd. The Hon. D. P. Bouverie was highly commended with a pair originating from Coleshill Dandy and Coleshill Jewel 2nd.

The Large Whites were not numerous, but good, and there is a tendency to suppress the heavy jowls. Messrs. Wherry, of Lincolnshire, certainly afforded a sit-up for some of the others who came on from Birmingham to win. They, in the young class, sent a neat, even-matching pair that, though well fed, yet contained a goodly proportion of the meat that the public like to pay for. Mr. Alfred Brown was a very close runner-up in this class, his pigs being full of meat, and Mr. Arthur Hiscock's reserve number made up three as good pigs of this breed as has been seen at Smithfield for some time. The older section consisted of a meagre entry of two only. There was no mistaking the merits of Mr. Arthur Hiscock's pen, however. They were long, straight, and with deep, nicely turned hams, and were declared winners of the Breed Cup. Mr. R. A. Ayre, Watford, sent a meritorious pair that might have been better remunerated than with the reserve number; but the entries did not admit.

Considering the amount of push that has been put into the Large Blacks these did not make large classes by any means, and the tendency is now for a somewhat shorter pig of more evenness throughout. The first prize in the young class went to a very smart pair sent by Captain S. E. D. Webb. They were of fair length, nicely set up, and full of quality. They secured the Breed Cup. Mr. Kenneth M. Clark was second with a pen more of the Suffolk type, nice and thick; and he had it all his own way in the next class, there being no other exhibitor. It was a pity there was not, as his pigs stood well and were placed reserve for the Breed Cup.

Berkshires did not hide their light beneath a bushel, or keep their heads buried in a pig's trough, though it was evident that they had done complete justice to the latter, and both as regards numbers and quality they constituted the feature of the show. In the young class there were thirteen entries, to win in such company was meritorious indeed, and it speaks well for the level headed management of the Visiting Committee of the Middlesex County Asylum that they could put in the pen two such splendid exhibits as they did, perfect as to points, they nearly constituted the buthcher's ideal as to flesh, and, after securing first and third, the former pen won the Breed Cup and the two championships of the pig classes. Mr. J. A. Fricker was placed second in this class with very even-matching pigs that ran the winners very close. The fourth prize went to Mr. Nathaniel Benjafield's exhibit. This pair had nice heads and grand backs; and the reserve went to the Earl of Carnarvon, whose pigs had evidently been done a bit too well. Mr. Arthur Hiscock's highly commended pen was evidently close on the age limit, they being entered as being eight months four weeks old.

By a singular coincidence the older class of Berkshires also totalled thirteen entries, and superstition was not justified, as amongst these the reserve championship of the show was placed, this being secured by two superb pigs exhibited by Prince Christian. They were brought out in the pink of condition, and were as matching as could be, and which were placed reserve champions. Lord Calthorpe's herd was well represented by some of the Duchess of Devonshire's strain, and that this selection was justified was shown by the fact that her Grace secured third prize. There was a considerable

set back to fourth place, which was filled by Mr. Laurence Currie's two, that did not place themselves to the least advantage when out before the judge. Mr. Alfred Brown, the whole of whose exhibits this year lack that grand bloom so intimately associated with this herd on previous occasions, was r. and h.c

Much was expected from the Tamworths after their extraordinary success at Birmingham, but they made exceptionally small classes, there being only Mr. R. Ibbotson's entry in the young class. These were of good quality. But the same exhibitor's entries in the older classes were much better. Here was placed first and also best for the breed cup with his Birmingham champion pen that are very lengthy, of good colour, and full of lean meat, he was also awarded second prize and r. for the breed cup for another excellent pen. Third prize went to Mr. H. C. Stephens Cholderton with a pair of growing pigs that needed a bit more condition.

The cross-bred classes, as usual, attracted attention, but, taking them as a whole, these were scarcely up to the form of the past two shows. There were only seven entries in the younger class, where the prize went to Mr. Fricker's Middle White Berkshire cross. These pigs were of grand quality. Mr. Alfred Brown's second prize pen, Berkshire Large White cross, were evidently weighers, but not quite so evenly modelled as the others. Mr. Arthur Hiscock's third prize was also of Berkshire Large White cross, but they were rather coarser. The r. went to the Earl of Carnarvon with a Middle White-Berkshire cross, the h.c. exhibit of Mr. H. C. Stephens being a Berkshire-Tamworth cross. There was a most meagre entry in the older cross bred class. Here Mr. Alfred Brown came out in his old style with a well-finished pen. They were shapely, they were weighers, and they should cut well. They were a Berkshire-Middle White cross, and took the breed cup easily. Captain S. E. D. Webb was put second with a Middle White-Berkshire cross that were also of good quality, the third prize going to Mr. George Atkins's Large White-Berkshire cross.

It is in the single pig classes where the breeds rub one another. In the class for single pig of any White breed not exceeding twelve months old Mr. John Manerson came in with a very fine specimen of the Large White bred by Mr. T. Simpson Jay. Messrs. Wherry were second, also with a Large White, of their own breeding, the r. also going to a specimen of the same breed exhibited by Mr. Arthur Hiscock. Mr. A. Brown's h.c. pig was a Middle White, as was also his Majesty the King's c. exhibit. Mr. Kenneth M. Clark was again the victor in the Black breeds the Middlesex Committee again leading with their Berkshires, Mr. Ibbotson also retaining his supremacy in the Tamworth section. There were but few entrants in the cross-bred class, Mr. A. Brown being first and r. with Berkshire-Middle White cross. Mr. Henry Grant was second with Berkshire-Tamworth cross, Mr. George Atkins' exhibit being a Large White Berkshire cross.

Carcase Classes.

The Carcase Classes were well filled, and produced good competition. The championship prize for the best specimen of beef in the three classes for cattle was awarded to Mr. J. Douglas Fletcher, of Rosehaugh, Avoch, for the carcase of a cross-bred heifer, 1 year 9 months old, bred by the exhibitor, which gained also the first prize in its class. The live weight of the animal was 11 cwt. 15 lb., and the weight of the carcase 101 st. 4 lb. Next in order of merit was placed the carcase of a Welsh steer, 2 years 11 months old, shown by Mr. Robert Hughes, of Bron-y-Maen, Llanfairfechan, which, in addition to being in reserve for the championship, was the first prize winning exhibit in the class for steers between two and three years old. The live weight in this instance was 13 cwt. 14 lb., and the weight of the carcase 119 st. In the class for steers under two years old, the first prize was awarded to Mr. R. M. Greaves, of Portmadoc, for the carcase of a Welsh steer. In the other classes for steers the prizes were awarded first to Mr. Hughes for the Welsh steer already mentioned. In the heifer class a cross-bred exhibit shown by the Duchess of Newcastle was placed next to the champion.

The champion exhibit of mutton was the carcase of a Suffolk wether, 8¾ months old, bred and shown by Mr. H. Grant, of Great Clacton, Essex. The live weight of the animal was 127 lb., and the carcase weighed 81 lb. This exhibit won also the first prize in an excellent class for wether lambs of any pure Short-woolled breed. In reserve for the champion was placed the body of a cross bred wether, 20 months old shown by Mr. F. N. Bocock, of Newmarket, which had a live weight of 178 lb. and a carcase weight of 109 lb. The prizes in a class for the carcases of weather lambs of any pure Long woolled breed under 12 months old were gained by the exhibits of Sir John Gilmour and Mr. W. Kennedy, both Scottish breeders.

The carcases of nearly fifty pigs were shown. In the class for pigs of a live weight not exceeding 100 lb. the prize-winning exhibits were those of Mr. N. Benjafield, of Shaftesbury; Messrs. Sanders Spencer and Son; Mr. H. Grant, of Great Clacton; and Mr. J. A. Fricker, of Mere, Wilts. In that for pigs of a live weight between 100 lb. and 220 lb., the first prize was won by an exhibit contributed by the Duchess of Devonshire, the second by one shown by the authorities of the Middlesex County Asylum, the third by Mr. R. Brown, of Southampton, and the fourth by Messrs. Sanders Spencer and Son. In the remaining class for pigs of a live weight above 220 lb. and not exceeding 300 lb. the prize-winning exhibitors were Mr. W. A. Dix, of Chertsey, and the Committee of the Middlesex Asylum.

Table Poultry.

The exhibit of table poultry was slightly below the number shown last year. A high level of excellence was obtained, and in most of the classes the judges bestowed commendation upon several of the exhibits which did not gain prizes. The cup for the best pair of pure-bred fowls was awarded to Mr. W. S. Hett, who secured also the cups for the best pairs of cross-bred fowls and farmyard fowls. Mr. Ben Taylor was awarded the cup for the best exhibit of ducks, and Mr. Frederick Read that for the best geese.

The cup for turkeys was won by Lord Rothschild. Among other winners of prizes for table poultry were the Duke of Devonshire, Sir Arthur Hazlerigg, and Lady Evelyn Cotterell.

Judges.

CATTLE.

Devons, South Devons, and Sussex.—Alfred C. Skinner, Pound Farm, Bishops Lydeard, Alfred Stanford, Eatons, Steyning, Sussex.

Herefords and Red Polled.—Rees Keene, Llanvihangel Court, Roiget, Newport, Mon., A. D. Bruce, Estate Office, Elvetham Park, Winchfield.

Shorthorns and Cross Breds.—James Peter, Berkeley Castle Estate Office, Berkeley, Glos., C. H. Eady, The Manor, Lockinge, Wantage.

Aberdeen Angus and Galloways.—William Whyte, Hatton of Fussie, Glamis, N.B., James Biggar, Grange Farm, Dalbeattie, N. B.

Welsh and Highland.—J. W. Harris, Pilrhoth, Llanstephan Road, Carmarthen, Robert Macdiarmid, Castles, Lochawe, Argyll.

Kerry, Dexter, and Small Cross-Bred Cattle.—F. A. Herdern, Buxted, Sussex, G. F. Roumieu, Bethune House, Farnham, Surrey.

£25 Cup, £50 Cups, Champion Plate, and King's Challenge Cup.—Richard Stratton, The Duffryn, Newport, Mon., W. S. Ferguson, Pictstonhill, Perth.

SHEEP.

Leicesters, Border Leicesters, Cotswolds, and Lincolns.—William Marshall, Cottam House, Driffield, Henry Smith, The Grove, Cropwell Butler, Nottingham.

Kentish or Romney Marsh and Devons.—Alfred Amos, Wye, Ashford, Kent, William Tuckett, Stockleigh Pomeroy, near Crediton.

Cheviots and Mountain.—William Davidson, Cornhill Farm, Cornhill-on Tweed, Simon Linton, Ookwood, Selkirk.

Southdowns and Shropshires.—Hugh Penfold, Moat Farm, Cornhill-on-Tweed, A. S. Berry, Church Farm,

Pigs.

SMALL WHITE OR SMALL BLACK.

Class 70.—Pigs not exceeding nine months old.—1, N. Benjafield; 2, Hon. D. P. Bouverie; r, Hon. D. P. Bouverie.

Class 71.—Pigs above nine and not exceeding twelve months old.—1, Hon. D. P. Bouverie; r, Hon. D. P. Bouverie.

MIDDLE WHITE.

Class 72.—Pigs not exceeding nine months old.—1, months old.—1, J. A. Fricker; 2, A. Brown; 2, H. M. the King.

Class 73.—Pigs above nine and not exceeding twelve months old.—1, J. A. Fricker; 2, A. Brown; 3, H. M. the King; r, E. H. Loyd; hc, Hon. D. P. Bouverie.

LARGE WHITE.

Class 74.—Pigs not exceeding nine months old.—1, W. H. and E. Wherry; 2, A. Brown; r, A. Hiscock, jnn.

Class 75.—Pigs above nine, and not exceeding twelve months old.—1, A. Hiscock, jun.; r., R. A. Ayre.

BLACK.

Class 76.—Pigs not exceeding nine months old.—1, Captain Somerset E. D. Webb; 2, K. M. Clark; r, K. M. Clark.

Class 77. Pigs above nine and not exceeding twelve months old. R. M. Clark.

BERKSHIRE.

Class 78. Pigs not exceeding nine months old.—1, Visiting Committee of the Middlesex County Asylum; 2, J. A. Fricker; 4, N. Benjafield; h.c., N. Benjafield and A. Hiscock, jun.; c., A. D Acland.

Class 79. Pigs above nine and not exceeding twelve months old.—1, H.R.H. Prince Christian; 2, Lord Calthorpe; 3, Duchess of Devonshire; 4, Laurence Currie; r. and h.c., A. Brown; c., Lord Calthorpe.

TAMWORTH.

Class 80.—Pigs not exceeding nine months old.—1, R. Ibbotson.

Class 81.—Pigs above nine and not exceeding twelve months old.—1 and 2, R. Ibbotson; 3, H. C. Stephens.

ANY OTHER BREED OR CROSS.

Class 82.—Pigs not exceeding nine months old.—1, J. A. Fricker; 2, A. Brown; 3, A. Hiscock, jun.; R. Earl of Carnarvon; h.c., Earl of Carnarvon and H. C. Stephens.

Class 83.—Pigs above nine and not exceeding twelve months old.—1, A. Brown; 2, Captain Somerset E. D. Webb; 3, G. Attkins.

SINGLE PIGS.

Class 84.—Any White breed breed not exceeding twelve months old.—1, J. Neaverson; 2, W. H. and E. Wherry; r., A. Hiscock, jun.; h.c., H.M. the King, A. Brown, and A. Hiscock, jun.; c., H.M. the King.

Class 85.—Any Black breed not exceeding twelve months old.—1 and 2, R. M. Clark; r., H. G. Regnart.

Class 86.—Berkshire breed, not exceeding twelve months old. 1, Visiting Committee Middlesex County Asylum; 2, H.R.H. Prince Christian; r., Duchess of Devonshire; h.c., Lord Calthorpe; c., Earl of Carnarvon, Alfred D. Acland, Alfred Brown, Lord Calthorpe, and A. Hiscock, jun.

Class 87. Tamworth breed not exceeding twelve months old.—1, R. Ibbotson; r., H. C. Stephens.

Class 88.—Any distinct or cross-breed, not exceeding twelve months old.—1, A. Brown; 2, Henry Grant; r., A Brown; h.c., G. Attkins.

Club's Annual Meeting.

At the annual meeting at the Agricultural Hall, on Tuesday, the Prince of Wales consented to become President of the Smithfield Club and Cattle Show for 1906. The President (Lord Tredegar) was in the chair.

The Council, in their report, regretted the serious loss which the Club had sustained by the deaths of Earl Cowper, Sir Jacob Wilson, Mr. Clare Sewell Read, vice-presidents, and Mr. J. E. Ransome and Mr. W. Newton, members of the Council. Mr. Wm. Harris, Long Sutton, Odiham, and Mr. H. D. Marshall, Gainsborough, had been, it was further reported, elected to fill the vacancies on the Council. The General Show Committee had considered the question of having a parade of the prize-winning animals, but in view of the risk involved in moving the animals, and the very slight advantage which such a parade would be to the public, they considered it was not desirable to have a parade. This report had been adopted by the Council.

Consideration had been given by the Council at a recent meeting to a circular letter from the Board of Agriculture suggesting the holding of local conferences between agriculturists and representatives of the railway companies, with a representative of the Board of Agriculture, on the question of differences as to the rates and facilities for the carriage of agricultural produce. Various matters which appeared to require attention were mentioned, and members invited to submit any such cases or grievances to a committee that had been appointed by the Council, preparatory to their submission by a small deputation to the President of the Board of Agriculture. During the past year the Club's funds were increased by the purchase of Consols to the amount of £383 14s. 5d. On October 31 the Club's invested funds were £4,500 Consols (valued at 90), while the balance of the current account at the bankers' and in the Secretary's hands was £840 3s. 6d., and the amount on deposit at the bank £2,000.

The President moved the adoption of the report and balance-sheet, and referring to the subject of the carriage of agricultural produce, said that at the moment there was no Minister of Agriculture, and that, therefore, the proposed representation would have to be deferred.

Mr. C. W. Tinstall seconded.

Railway Preference

Mr. William Cooper, in supporting, said he had had innumerable conferences with railway companies, but with very little success. They seemed at all times to deprecate British agriculture and to do everything they possibly could to give advantage to the foreigner. (Applause.) This was no figure of speech. The rates charged for the carriage of foreign produce were much lower than those charged for home-grown produce, and it was very extraordinary that railway companies considered that it was no part of their duty to foster and encourage British agriculture. The genesis of many railway undertakings was understood to be the development of agriculture, but the companies now seemed only to think how they could increase their dividends at the expense of the British producer by giving greater facilities to the foreigner. The companies said that the foreigner did this and that which enabled them to carry his produce much easier and cheaper than that of the home producer, but that was a very bald excuse. Whereas they charged 70s. per ton for meat from Aberdeen, only 25s. per ton was paid from Liverpool. (Applause.) They were to have a change in the Minister of Agriculture. He was not at all sure that that held out any great hopes of success, but there was an idea of a new broom sweeping clean. At any rate, they hoped that the new Minister would, like his predecessors, take a deep interest in agriculture.

The President generally agreed with Mr. Cooper. He did not, however, think that railway directors were as bad as the speaker had painted. The Smithfield Club would press the matter upon the new Minister of Agriculture. Mr. Cooper had spoken of a new broom—well, they would have three new brooms at the Board of Agriculture in twelve months. (Laughter.)

The report was adopted.

Lord Winterton then moved that the Prince of Wales be elected President of the Club for 1906. He dwelt upon the great interest which the Royal Family had taken in agriculture and the Club, and said his Royal Highness was following the example that had been set him. The King had this year won outright the challenge cup given by the Prince of Wales for sheep and lambs. (Applause.)

Mr. Bowen Jones seconded, and the resolution was carried with acclamation.

On the motion of Mr. Cooper, and seconded by Mr. S. Kidner, Mr. James Hornsby was chosen President-elect, and will consequently fill the Presidency in 1907.

In accordance with the articles of association, twenty-two names had been submitted to the members for election to the Council, and the following eleven had been elected to serve for the ensuing three years:—Messrs. C. R. W. Adeane, James Bigger, Richardson Carr, William Cooper, J. J. Cridlan, W. S. Ferguson, Thomas Goodchild, A. C. Skinner, Richard Stratton, John Threadwell, and J. D. Willis.

Prince Christian next proposed a hearty vote of thanks to the retiring President.

Mr. James Hornsby seconded, and the resolution was warmly agreed to.

Lord Tredegar, in a brief reply, recalled that he filled the Presidency twenty-five years ago.

The Herdsmen's Smithfield Club.

On Monday evening last there was even a larger company than usual at the occasion of the annual meet of the Herdsmen's Smithfield's Club at Reggiori's Restaurant, King's Cross. It is seemingly but a few years ago that this club was practically unknown outside of the herdsmen themselves, and only even a portion of these were conservant with the extent of its scope and utility originally instituted to give encouragement to those herdsmen whose charges had won high honours for their masters. But it was soon seen that even more was required, and then a little helping hand to those stricken by sickness or assistance to a household where the old armchair had been rendered vacant brought on a kindly recognition on the part of the masters at first, this took the form of subscriptions, they then began to take a personal interest in the club and encourage the men to help themselves. It was soon seen that the lean stock men must join hands with the fat stock men, and thus originated the summer meetings at Park Royal and in the the show yard of the Regal Lancashire Society, the early pioneers, Messrs. Hailas, George Sinclair, and others soon proved that it was not a purely Scotch movement, and they welcomed Mr. Arthur Hiscock as their first breeder president, and he put spirit into the movement. It was found that a business and social evening could not be combined, and so the purely business section was transacted on Saturday evening. The balance-sheet for the year shows subscription amounting to £47 3s. 6d., and members' fees £23 12s. 6d., or a total of £70 16s. Out of this payments on account of sickness and death have been made amounting to £54 2s., and prize-money £26 10s. There are a few minor expenses, but the nett result is a balance in hand of £91 2s. 1d. The loyal toasts having been duly honoured, the Chairman then, on behalf of the members, presented the secretary, Mr. George Sinclair, with a most handsome marble clock and supporting ornaments, as well as a gold bracelet set with opals, for Mrs. Sinclair. The clock bore the following inscription: "Presented to George Sinclair, Esq., by the members of the Herdsmen's Smithfield Club and a few friends in recognition of his faithful services as Honorary Secretary and

Whitchurch Cheese Fair.

There was a fair pitch for the time of year (forty tons), but many of the lots were slightly too new, sufficient time not having been given to bring them to due maturity before being placed on the market. On Thursday the whole of the cheese was quickly disposed of, buyers being present in strong force, but the prices realised were a shade under recent quotations. The highest grades made from 68s. to 73s. per cwt., medium grades from 63s. to 67s. per cwt., and lower qualities down to 60s. per cwt.

THE DUBLIN SOCIETY'S WINTER SHOW.

The annual Christmas show of this Society was held on Tuesday, Wednesday, and Thursday last in the usual place, the Society's most suitable premises at Ball's Bridge. There was not a large attendance—indeed, the public never have flocked to this show as they, one would think, ought to do. The business it encourages, that of fattening cattle and sheep of improved breeding, is one that concerns the country and its people very extensively, and the show is deserving of most wide sympathy from farmers and landowners in all its provinces. The weather, it is true, was not altogether of an inviting description, being gusty, cold, and squally; yet in the winter such changes are generally expected and prepared for.

The show of cattle was some considerable number short of last year's entry, and the quality, generally speaking, was quite in sympathy with the falling off in numbers. The general want of higher condition in the out-fed cattle is attributed by the breeders to the bad season for grass, owing to a too long spell of fine weather. In a country like Ireland, however, where roots and green food can be so plentifully raised, the matter of a few weeks' drought ought to be tided over, or even a little extra cake or corn could have been given to compensate for this. One point, perhaps, may be taken into consideration in respect of this shortness of feed, namely, that all those animals that were in the ripest condition—and which naturally means all the best-bred ones—were disposed of in the early part of the season, leaving the plainer and more common-bred animals, as well as the more backward-conditioned ones, for the Christmas shows and markets.

Those who paid best attention to their stock will reap the greatest benefit, as the demand at good prices for the best cattle was very bright, and on the morning of the second day of the show very few animals were left in the exhibitors' hands, the label "Sold," or the scissor-clips of the buyer being most conspicuous along the lines. The small cattle had received exceptional attention, and most of these were for England.

The in-fed cattle were the ripest, and these, also, as a rule displayed the most quality, partly from being younger and having been kept going from their birth, and partly from the better feeding.

The number of purely bred animals at the fat-stock shows of this Society is surprisingly few. Shorthorns have a long way the best of it in this respect, and there are also a few Aberdeen-Angus purely bred, but Herefords and and any other breed are scarcely to be found at all in their pure state, 90 per cent. of the animals being cross-breds of either Shorthorns and Angus, Hereford and Shorthorn, or one or other of the small crosses. This extraordinary amount of crossing causes a great want of uniformity in the classes, both in size and type. The classification, too, is one that might with the greatest possible benefit to all parties concerned be considerably altered. The distinction between being artificially and naturally polled is not at all reliably calculated to give the same kind of animal in either division, some of the polled crosses are born with horns and some without when served by the same bulls and from the same class of cows, and then one of these is eligible for one class and the other for another. Then the distinction of in-fed or out-fed artificially sheltered is also one that cannot be called properly a distinction—or at least a distinction without a difference. With a complete turning over of these classes in these respects, abolishing half of them, and giving more substantial prizes, it seems on the face of things ought to be tried by the Royal Dublin Society, rather than giving up their winter show in despair of its ever becoming popularly attractive.

In weights very few of the cattle here give as good record for age as at the English shows; a few of the older ones, perhaps, show as much, but the generality of those under two years are much lighter than the English ones, of whatever breed they may be.

The champion of the in-fed section of the show this year is an Aberdeen-Angus steer under two years old, bred and fed by Mr. R. G. Nash, sired by Jumper 2nd, and calved in March, 1904. He scales now 12 cwt. 0 qr. 8 lb., and is one of the most symmetrical steers out this season of his age; his character and quality, too, are quite first-rate, and he looks well able to go on satisfactorily for another year. He, of course, was awarded, in addition to his champion prize, first prize in his class that for steers naturally polled and under two years of age.

In the horned or artificially polled section some very good cattle were shown of Hereford and Shorthorn cross, and Angus and Shorthorn, as well as Angus and Hereford. The chief winners in these were Colonel Everard, whose Hereford crosses under three years were just

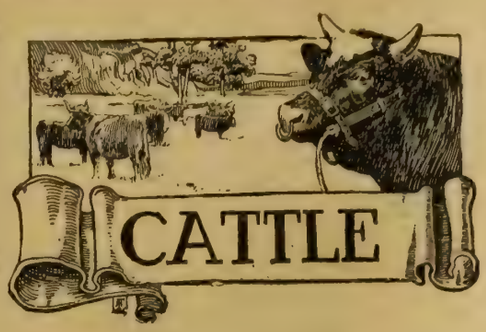
upon 15 cwt.; Miss Staples, with Shorthorn in the not exceeding two years and eight months class, weight just upon 14 cwt.; and Mr. Nash in the under two class with Angus and Shorthorn at near 13 cwt. These were all steers. In heifers, similarly, Miss Staples was first in the middle class with a Shorthorn of 13 cwt. 0 qr. 11 lb., and Mr. Richard Williams, in the under two years class at nearly 11 cwt. Mr. Thos. Anderson's first prize Angus ox in the naturally polled section under two years and eight months, was of very good weight, scaling 17 cwt. 0 qr. 14 lb., and Miss Staples's second prize Angus and Shorthorn cross under two years was 14 cwt. 2 qr. 20 lb. Naturally polled heifers in the other classes were rather lighter.

Small cattle were a very large entry, and as variable in character and quality as they were numerous. Mr. R. G. Nash, Mr. James Griffin, and Viscount Duncannon were the most successful exhibitors in these, and showed several remarkably ripe and good quality animals as well as symmetrical, their weights coming out pretty well up to their limit, except in the case of a few of the younger ones. Groups of three cattle were not as good quite as usual, several of them being rather ordinary. Mr. Nicholson, Mr. Thomas Leonard, Mr. F. Murphy, and Mr. H. D'E. Stevens were the winners in these of the first prizes, and the weights were not excessive. In single out-fed oxen Mr. Nicholson won a first and a second prize with two remarkably big Shorthorn bullocks of deep and well-shaped build and first-class beef, under four years old, and weighing over 18 cwt. each. Mr. Joseph Lowry had a blue-grey, also 18 cwt., and Colonel Everard had also very nice animals winning first prizes in this section. The Earl of Longford also carried off a first prize with a blue-grey not exceeding two years and eight months, at about 14 cwt. Captain Howe and Viscount Duncannon were also successful in securing first. In the entirely out-fed section Colonel Everard had some Hereford crosses of excellent quality and over 17 cwt. each. The champion of this entirely out-fed section was a black cross-bred Angus of Mr. Michael Farrell's, not exceeding four years old, that scaled 19 cwt. 0 qr. 18 lb., and was of good shape and beef. Captain Steeds was another successful exhibitor, also Mr. Markey and Mr. Thomas Anderson.

SHEEP.

The sheep show at Ball's Bridge has never been a great attraction so far as the number of entries is concerned, and the present season is not at all better supplied. There are, however, several pens of very good sheep, and several pens of crosses of a somewhat novel mixture that promise to be worth while encouraging. These are with the Roscommon and Oxford breeds. There are also some splendid sheep of Cheviot and Shropshire cross. Mountain breeds were shown in somewhat natural condition. The best pen of Longwools were quite a grand trio, these were three Roscommon ewes, shearlings bred and shown by Mr. G. R. Acheson, and for quality, touch, and generally first-class practical points, are quite a first-class entry. Their weight is 8 cwt. 2 qr. 12 lb., and they well merited the special cup that was also allotted to them. Mr. Franks had a very good pen of Border Leicesters placed second to them; these were 6 cwt. 2 qr. 9 lb. In the Short-woolled class both first and second prizes fell to the Shropshire breed for very well matched pens, with breeding and quality about them, shown by Mr. R. Hamilton Stubber and the Earl of Longford, and placed in the order written. The first pen scaled 6 cwt., and the second 5 cwt. 2 qr. 9lb.. Cross-breds were a strong class in most cases, the Oxford breed taking part. The first prize pen were from the Earl of Longford's, and were of Cheviot and Shropshire cross, taking the two breeds very evenly in point of features, and their quality was of the very best. These scaled 6 cwt. 0 qr. 16 lb. Black-faced and Cheviots were of good breeding and quality, but very few of them were fed up thoroughly. The Marquis of Waterford had a very fine pen of the former breed, scaling 5 cwt. 0 qr. 23 lb.; and Mr. L. F. Ball had the best Cheviots. Lambs of the present year were not numerous, Mr. M. H. Franks and Sir Algernon Cootes were the exhibitors of them, both being pens of pure Border Leicesters and of exceptionally nice quality, the first-mentioned were awarded the first prize, their weight being 4 cwt. 2 qr. 3 lb. In the Cross-breds, Mr. M. H. Franks carried off first honour with a pen of lambs of Oxford and Border Leicester cross, scaling 4 cwt. 3 qr.; very good quality and well brought out. The Earl of Longford's second prize pen were of Oxford and Roscommon cross, and these two were quite an exceptionally good pen and scaled 4 cwt. 2 qr. 8 lb. The capital quality of these lambs quickly secured purchasers for them for the English market.

The entry of this section has dwindled away to almost a blank. The pens have never filled as might be expected, but this season the total of three entries only is quite a low record. These were all Whites of good quality and light weights, shown by Mr. G. J. Smith and Mr. J. Wellington.



Notes and Jottings.

To all feeders of fat cattle, whether for show purposes or only for the ordinary market, the week before the big market in London is a very important one. A great many home auctions and sales take place, as well as the Smithfield, Dublin, and one or two other smaller shows, and the aspect prices and demand assume at these places form a fair guide to what may be anticipated at the great Christmas markets that take place the following week. In these notes we have for weeks past prophesied a good demand for the best-finished, thoroughly ripe animals with quality about them, no matter what their size. All things seemed to point to a good trade as being quite probable. Choice beeves, in spite of large supplies in total, have been very scarce.

In all our English markets, in Chicago, in Ireland, and elsewhere, the cry has continually been that first-class cattle were hard to obtain. Up to the time of writing these notes matters have progressed much, as was anticipated. Taking show cattle first, at the Midland Counties Exhibition, at Birmingham, a great number of cattle were sold on the first day of the show. At Smithfield the same thing took place; whilst at the Dublin show practically everything on offer found buyers and good, fair prices, and in the open market at Dublin cattle were much dearer on the Thursday. It is well that is so, for, with the high prices ruling for corn and cake, stores bought a little dearly to begin with, and a season following that from drought lost a good deal of progress, cattle feeding would have been a much worse business than usual.

The great annual Smithfield Show proved quite as great an attraction as usual to all stock-breeders from the country, as well as to the special show-feeders and the butchers, whilst the general public always appear to like to see something of their Christmas beef whilst it is alive. The judging at these shows, especially of the champion honours, is a matter that proceeds with possibly less satisfaction than any other branch of officialism at these shows. This is mainly owing to the several different breeds that are exhibited, all of which have a right to, and do, take part in the contests for the open champion prizes. The single-judge system appears to have lost favour, and the breeder-judge system appeared to do so likewise. This year dual judging was once more resorted to.

Whether the decisions were satisfactory or no was not commonly said; there were, however, many who were of opposite opinions to the judges—as there probably always will be. Having regard to all things concerning these important awards, it becomes quite worth while thinking whether some other way or deciding them ought not to be adopted. One plan might be for the whole of the judges to take part and vote upon the matter, the animals obtaining the greatest number of votes to be the winners. Then there is another plan that strikes me as being worth a trial, namely, to settle the matter by a scale of points, so many points being allowed for weight for age or, in other words, early maturing with weight—other points in breed character, symmetry, and ripeness.

It is high time weight was much more taken into consideration than it has been. When we find animals of fine symmetry, first-class beef properly finished and scaling several, or, at least, 3 or 4 cwt. heavier than others that have had the same time and amount of feeding, surely the heavier animal—with its greater value to the seller, feeder, and consumer—should take precedence. It would be but a very simple thing for the Smithfield Club, or for a conference of members of Council from the Birmingham, Smithfield, and Edinburgh clubs to formulate a scale of points that would work easily and smoothly, and prevent many heart burnings, as well as a good deal of unfavourable criticism of the judges, which is often as unfair as it is unpleasant.

The final championship of the Smithfield Show lay between two heifers, one of the Shorthorn and one of the Angus breed, both of which had been accounted the breed cup or best specimens of their respective breeds in the Hall. In point of symmetry and quality there was, many would say, not a hair to choose between the two, both being finished in the best possible manner and brought out with the finest gloss upon them. The award in such a case, where two judges are concerned, rests practically with the man who is the smartest hand at diplomacy or, in plain language, can play his cards the best. He is certain to have the pull over a quieter and less assuming judge, who invariably in dual judging acts upon the give and take principle.

Taking the age and weights of the two heifers mentioned as contesting the great Smithfield champion honours, the two were exactly the same age, or at least there were but two days between them according to the entries in catalogue. In weights, however, the Shorthorn scaled ½ cwt. 19 lb. the heaviest, which, seeing that the award appeared to hang so long in the balance, would or ought to have decided the honour in favour of the roan heifer. At the Birmingham show the week previous the chief contest lay between the Hereford and Shorthorn breed, resulting in a victory for the former. There the Shorthorn had the advantage in the way of age and the Hereford in weight, and it is quite probable that points would have given a result similar to what was arrived at—the Hereford being first.

Many years ago in the entries of these cattle at the Christmas shows the kind of feed used was stated in conjunction with the age, etc., of the animal. This sort of thing, if it could be relied upon as being given correctly, would help very amazingly in teaching what kind of food yielded the most weight in a given time, and also would be of immense value in teaching what kinds or mixtures of feed gave the best results as regards quality of meat when slaughtered. At present these shows, whether of live or dead stock, teach us but very little; indeed, it is very difficult to see in what way we are benefiting practically as feeders. There is perhaps as little to be learned as to the results or effect of mixing certain strains of blood or certain breeds in crossing.

The other day I came across an article dealing with the earlier days of Shorthorns, in which mention was made of the celebrated Durham ox. This reminds me of what an ancestor informed me with regard to that notable animal—namely, that he gained the greatest weight per week in the month of March, when his food consisted very largely of common or white turnips, and, as his feeder expressed it, when they were "quite woolly." It may be that being rid of their watery properties the feeding powers of these turnips are better at such a stage, otherwise the generally accepted theory in these days seems to be that this kind of root is but of little value after February. Such a thing is worth a little attention, and might be attended with profit.

To return to the Smithfield Show, there was exhibited there a Galloway steer or two of the sheeted kind—that is, with a white belt round the middle. One was a dun with this white marking, and the other a black. When travelling northward a few weeks since I met with an individual of the softer sex very much interested in horses and cattle, who was speaking about these sheeted Galloways and their great interest and beauty. The animals exhibited at Smithfield, there is no mistake, were quite "proper" as Galloways, of beautiful quality and shape, and the white band gave them further interest. It would be very interesting to learn the origin of these belted or sheeted cattle. They are mentioned by Yonatt as being found in parts of Devon years ago. Indeed, I had some for my own feeding from that county many years ago.

Then there is a Welsh breed exactly similarly marked, and very picturesque they look grouped together in a park or on ordinary feeding lands; and these, too, are good doers. Now there appears to be a third section in the South of Scotland marked in the same peculiar manner. Thus they seem to run from Devon in the south-west up through Wales to the lower part of Scotland. The Welsh beasts are black with the white band (of considerable width). The Devonshires were red with the same white belt, and these Galloways appear to be either duns or blacks with the white sheet thrown around them. The young breeder with intelligence and energy, as well as a little spare capital, might do worse than look into these cattle. There is money in them.

During the past summer I met by chance with two of the Welsh section of them, shown in a dairy class, and right good milkers they evidently were. White colour has always been associated with milk. Many of the best Short-

horns of both the earlier and latter days, as milkers, have been of the white colour, and depend upon it, it would be no difficult matter to evolve a capital strain of milking cattle from these sheeted Welsh or Galloways; and how valuable such a race of cattle would be! Hardy to a degree, good cattle for feeding and the butcher, and handsome for the park and pasture; then, with the dairy points added, they would quickly find many to favour them.

Contagious Diseases of Animals.

Summary of Returns issued by the Board of Agriculture for the week ending Dec. 2, 1905:—

NOTE.—The figures for the current year are approximate only.

Sale of Mr. Balston's Shorthorns.

An important sale of Shorthorn cattle, comprising Mr. R. J. Balston's entire herd, took place on Thursday, at Barvin, near Potter's Bar, Hertfordshire, Messrs. Thornton and Co. being the auctioneers. There was a large and representative attendance, and a successful sale. Some of the tribes represented were the Miss Ramsden, Red Rose, Waterloo, Bracelet, Raspberry, and the Rose of Warlaby. The herd was in nice healthy breeding condition, and was sold in consequence of Mr. Balston's absence from England for a considerable time. The best price among the cows and heifers was 66 guineas given by Mr. J. Webb, for Bonny Scot a roan five-year-old cow bred by Mr. E. T. D. Robinson, in Yorkshire. Mr. E. Harwood gave 50 guineas for Lady Ollie, bred at Sandringham, and Mr. R. P. Cooper, and Mr. G. Frear, 51 guineas each for two-year-old heifers. The yearling bull Stars Crack, bred by Mr. H. K. Colville, made 52 guineas, to Mr. A. Hiscock, but the old stock bull went cheaply enough at 29 guineas to Mr. Henge.

The following is a list of the principal sales:—

Horse Notes.

"He doth nothing but talk of his horse."
—Merchant of Venice.

The New York Horse Show has been a great success, and it is likely to become even a still greater favourite with English Hackney breeders than it is, after the very pleasant experiences of the recent gathering. Mr. A. A. Haley, of the Whitewall Stud Farm, Malton, must have very agreeable recollections of his visit to New York in the rôle of exhibitor, for he showed three stallions, all of which took first prizes. Trade was, I hear, very good, and our American cousins are keener about the Hackney than ever. So that when the English show season comes round again we may expect to see some buyers over on the look-out for high-class horses.

The question of judging is a perennial one, and no sooner does the dull time of the year come on than we have any number of letters from disappointed exhibitors and angry spectators, dealing with the shortcomings of judges in the past and proposing drastic, and not very possible, changes for the future. The disappointed exhibitor is always with us, and he is perhaps not altogether the fairest critic of the judges. Neither is the general public. The general public at times takes a certain horse for an idol, and whenever he is beaten is apt to get angry. There is one thing pretty certain, and that is that though the judging is open to improvement, as a rule it is honestly done, and as a rule it is well done.

Personally, I fail to see how any better system can be devised than that of a couple of practical men judging together, with a third man called in as umpire. The ideal system of judging is that pursued at the Agricultural Hall at the Shire and Hackney Horse shows. It is perhaps unnecessary to say that three judges are appointed, but that two only act, unless the services of the other are required as referee. The first two to act are appointed by lot, and one retires after every class is judged. It is just possible that the fact that there is an expert in the ring with them who is in a measure justified in criticising may have something to do with the expeditious and generally satisfactory way in which the judging is done at the great London shows, but the care with which the judges are selected, and the excellent plan of having two judges, are no doubt the reasons why the judging is so well, and, as a rule, expeditiously judged at the Agricultural Hall.

It is suggested that there should be a jury of five or even more to give their opinions on the various class; but would the public, with its prejudices, or the disappointed owner, be one bit better satisfied if this plan were adopted? All the suggestions seem to be made on the assumption that the disappointed ones would find themselves winning. Of course this is not stated in so many words, but the assumption is easy to see by those who can read between the lines.

The fact is patent to all who have a wide experience of shows and showing that the judging is, on the whole, very fairly done, and there can be no doubt that it has improved and is improving. Of course, mistakes are made now and again, and they will continue to be made to the end of time; but really they are not of frequent occurrence, and the criticisms of outsiders would be materially modified if they made the close inspection of the exhibits which a judge is compelled to do. Public opinion, too, is very much influenced by the record, whilst the judges have to judge the horses as they are at the time, and not as they were a month previously. This is too often lost sight of. Plenty of instances can be given of how an inferior horse was better on a certain day than the horse that had always beaten him. One is very much to the point. It was in a harness class, and one horse had won prizes all over the country and in the best of company. His most formidable opponent was a young horse that had been second to him a few times—a very promising young horse indeed, but not quite so fashionable, and with not such showy action. But it so happened that there had been a good deal of rain for two or three weeks previous to the show in question, and when a heavy thunderstorm, followed by continuous rain for three or four hours, took place in the early hours of the morning of the show, the show ground, which was naturally on the soft side, was very heavy-going indeed. The fact that several classes had been judged in the rings before the harness class came in, did not tend to improve the going, and before the favourite had gone twice round the ring he was sprawling all over the place and leaving his hind legs behind him. Every chance was given him; he was run on the top of a ridge, but the farther he went the worse he went, and eventually he was placed second. The truth of the matter was that the winner was the better bred horse, and his extra dash and blood got him through the dirt. There was a considerable outcry at the time, and the owner might have found himself in an awkward position if the judges had not been good natured, for his utterances were distinctly libellous.

There were plenty of people, of course, who did not hesitate to say that the constantly repeated formula, "He has always beaten him before," was no argument; but these, as is usual with men who know, were not clamourous. Only make plenty of noise and you will get yourself heard, is a maxim of the ignorant, and one they don't forget to honour in practice. So, when anything of this sort occurs the noise goes on, and the true circumstances of the case are forgotten, and an upright and capable judge has reflections cast upon him which are utterly unwarranted and unjustifiable.

Whilst on the subject of judging, I must draw attention to a growing evil at our shows. It began, and it is seen at its worst at the Hackney Horse Society's Show in London, but it is, I am sorry to say, spreading. That is the organised attempts to influence the judges by a carefully arranged system of applause when certain horses are being shown. When a class is sorted down to some eight or nine, every time a horse is shown out there is a round of shouting, rapping with sticks, and other noises, and there is little doubt that at any rate the inception of these noises is due to paid claqueurs. A few men judiciously placed here and there round the ring side and on the stands can do a great deal in causing what appears to the uninitiated, a spontaneous demonstration. That such organised demonstrations are exceedingly unfair is manifest, and they should be strenuously suppressed. This, however, is by no means easy of accomplishment, though it would have been easy to do at one time. Still, all right-thinking people would do all in their power to help the executive to put an end to the nuisance if they would only use the means they undoubtedly possess. Simply putting up a notice that anyone making discordant noises or rapping with their sticks whilst horses are being shown will be turned out and then doing nothing to enforce the rule is worse than childish.

From time to time I have pointed out in this column that though we are by no means doing what we might do and what we ought to do in the way of horse-breeding, still things are not in such a bad state as some would have us believe. The returns of our horse stock show that we have made some progress at any rate. The first returns were published in 1876, and according to the recently published return which gives the number, there are 2,116,798 horses for agricultural purposes, which is an increase of 16,000 on the return of thirty years ago. It is not a very substantial increase perhaps, but it is satisfactory to note that at a time when mechanical contrivances for doing work hitherto done by horses alone have increased to such an extent as they have, that our horse stock was never so large as it is at present.

THE LOOKER ON.

VESTA CAKES and MEALS.

In order to enable us to supply clean Cotton Seed and a Cotton Cake of good quality we have taken over a mill lately fitted up with the very best modern machinery, which enables us to sell at the lowest possible and at the same time turn out an Undecorticated Cotton Cake practically free from LINT, DIRT, and SAND.

The Cakes are branded "VESTA" PURE.

Buyers of the "VESTA" FEED CAKES can have the Cottons shipped at same time, thus saving any delay.

"Cakettes" FOR Cattle

(Bibby's Patent).

No Trouble. No Waste. No Extra Cost.

BIBBY'S NEW METHOD of Manufacturing Feeding Cakes.

It has been our good fortune, from the commencement of our business career, to have led the way in the production of high-class Feeding Cakes; and our "BIBBY" CAKE, BIBBY'S FEEDING CAKE, and BIBBY'S DAIRY CAKE, with their corresponding Meals, have now for many years taken the first place in popular favour.

We have recently taken another step forward, and have invented a process by which the Feeding Cakes can be turned out in the form of "Cakettes," as shown in our illustration; it is obvious that this improved method of manufacture will save a good deal of time to the Feeder—and what is more it costs him nothing.

So excellent an innovation has attracted the attention of a great many Cake users, and naturally more or less plausible imitations of our "Cakettes" are beginning to loom on the horizon.

We do not complain of this in the least, so long as the Feeder knows exactly what he is buying; for no one is quicker than he at discovering the difference in value between an original piece of work and a more or less successful copy. For the same laws obtain in commerce as in art; and all artists begin by copying the work of the masters in the craft.

But a caution is necessary; no connoisseur of art expects the same perfection of detail in a copy as in the original picture; and a user of Feeding Cakes, when buying an imitation of our "Cakettes," should not conclude therefrom that he is getting a Cake of our quality.

We have been catering for many years for those Feeders who demand—and who will have—

The Best Feeding Stuffs the Market affords;

and we maintain a staff of Chemists and an Experimental Farm, researching all the time after improvements in all directions; and it must be manifest to all that this line of policy is bound to yield the best results obtainable, a fact which any observant feeder will discover for himself if he make careful tests.

We may add that all the most approved methods of producing Cake in this form have been patented by us, and not only is the quality of our "Cakettes" the result of years of the most painstaking research, but the pieces themselves are more regular, shapely, and more satisfactory in every way than can be otherwise obtained.

We have, therefore, thought it but right to bring these facts under the notice of feeders, so that buyers who really want our "Cakettes" may not be put off with an imperfect article, and particularly as the genuine thing can be had at the same price.

We have registered the word "Cakettes" to describe the results of our improved method of manufacturing Feeding Cakes; and buyers who want our "Cakettes" should see that the word "Cakettes" is plainly marked on the bags, as shown in our illustration. If the word "Cakettes" is not on the bags, and you have been sold something "Just as good," we recommend that a practical experiment be made to test the quantity and quality of the milk which they severally yield, for the stomach of a cow is a handy and reliable chemist; and the more the farmer submits the claims of rival Cakes or Meals to practical tests of this kind, the more careful will he be to select the original article, however plausible a copy of it may be recommended to his notice.

For further particulars, with delivered prices, please apply to our local representatives, or direct to the

Notes and Jottings.

Smithfield Show is fully reported elsewhere, and hence there is no reason to refer in detail to that notably fine exhibit of British sheep.

Incidentally there is a matter which I have not observed mentioned elsewhere in connection with Smithfield Show. It is the growing importance of this annual meeting to the stud sheep breeder. To mention that the Smithfield Show can after all these years become more important to the stud sheep breeder than heretofore may be questioned by some. The fact, however, is that in no previous year were so many of those gentlemen who are engaged in the export business present than was the case upon the two first days of the recent show. That the export breeder should make a practice to come to this show is a matter of satisfaction, because at no other centre can so many distinct varieties of British sheep be seen, developed to the fullest extent that care and good management can effect. Many enquiries were heard of for sheep for export, but there is a growing practice amongst more than one leading breeder to give no details, hence it is not within our power to report fully, and it can only be stated in general terms that the export demand was very active, and several important transactions were either completed or under negotiation.

We heard much comment when the system of single judging was inaugurated, both for and against the system. The opponents gained the upper hand, and the Club reverted back to its old practice of grouping two breds together, and so far as regards the pure-bred classes selecting one judge from each breed.

It has been claimed that this is a better system than leaving each breed judge alone to his own particular breed. It may be that those who are but casual observers are satisfied, but a careful examination of the entries this year confirm the opinion held by the writer that far more mistakes have been made both this year and last than when each breed had its separate judge, the only rational and right way so long as two breed experts cannot be appointed. Mention of judges brings to mind a real grievance which a section of the cross-bred exhibitors have, namely, it almost invariably is the case that those selected to judge these classes are representative breeders and feeders moreor less connected with breeding the larger-sized breds.

Doubtless those who are selected are reliable and competent to award the premiums, but it would, it is considered, largely increase the number of entries, and, in fact, be carrying out the system adopted in the other classes were the Council in the future to select its cross-bred judges, one from those engaged in breeding and feeding the larger cross-breds, the Oxford and Hampshire, for instance, and another from those more intimately connected with the smaller class of cross-breds produced by either the Southdown or Shropshire. The Hampshire Down Sheep Breeders' Association, by establishing an annual dinner in town during Smithfield Week, the first of which took place last Wednesday, under the genial presidency of Mr. A. F. P. Drake, has taken an important step, and one that cannot fail but to be of value to the breed as a whole. This annual reunion of breeders from all parts of the country will do much to advance the mutual interest of all, as well as affording an opportunity for interchange of opinion, etc., that should be of considerable value.

From some facts mentioned by Mr. J. E. Rawlence in the course of his speech at the dinner, we find that the Hampshire Down Society was founded in 1890 with a membership of eighty-four in its first Flock Book, whose aggregate total of sheep then registered was 114,000, at the present date fifteen years later, the membership numbers 390, and the total of registered sheep in the "Flock Book" numbers 228,865. This notable increase is a matter of which those who have been connected with the Society all through its career can well be proud of. The number of members and the large total of registered sheep also confirms the Council's decision that the time has now arrived when the "Flock Book" can be closed against all but sheep bred from registered sheep without danger to the best interest of the breed.

More than one other Sheep Society are contemplating taking this step, but a word of caution is advisable, particularly to those Societies that have so large a members' roll as the Hampshire Down Society. It is bad policy to be too hasty, and where rules are in existence that provide for the use of properly registered rams for at least four years previously to registration there can be no question, but it is far wiser to those societies that have not a large number to come to no hasty decision upon so important a question. The annual general meeting of the National Sheep Breeders' Association has been held during the past week, the President for the current year is Mr. J. T. Hobbs; another President-elect is Mr. J. Flowers, both of whom are well known as thoroughly practical and leading flock masters.

Some say with the change of Government there is a danger that the existent regulations that govern the importation of live stock may be altered. A resolution was passed at the National Sheep Breeders' meeting that no alteration should be made. Sheep-breeders have a particular interest in seeing that the free importation of live sheep for grazing purposes should not be again allowed. Those who are old enough to remember what happened when this freedom was last in operation will not have forgotten the many scabby sheep that came from other countries, and there are many who consider that this importation of sheep scab as well as sheep is one of the many reasons why the disease increased so rapidly a few years back, just at the time these imported sheep were coming and immediately after the trade was stopped.

It is with sheep as with cattle. We do not say that we shall import disease, but experience of the past shows there is a great danger of this being done. Prudence, therefore, urges why incur the risk, particularly now when the imported supplies of both beef and mutton have assumed proportions altogether beyond that anticipated when the present wise, judicious, and sure regulations were put into force.

Australian Industrial Openings:
Fruit Drying.

Among the numerous infant industries of the Commonwealth none show a more certain promise of future development than that associated with the production of raisins, currants, and other dried fruits. Although in California, where the soil and climate closely resemble those of the southern half of Australia, fruit-drying has been made the basis of a large and remunerative export trade, the lesson thereby afforded was, until a comparatively recent period, completely lost upon the Australian colonists, notwithstanding it had been frequently pointed out that in those districts where the grape grew most luxuriantly the production of raisins of a good-quality was attended with no difficulty. The establishment of the two irrigation colonies—Mildura, in Victoria, and Renmark, in South Australia—was followed by a rapidly-increasing output of raisins and currants, dried apricots and peaches, and other dried fruits of such an excellent quality that they went rapidly into consumption, demonstrating beyond all question the possibilities of the industry if conducted on sound principles.

At Mildura 8,386 acres were under culture in 1903, the crops raised including currants, sultanas, peaches, and citrus fruits. About 2,509 acres are under gordos, 2,141 acres under sultanas, and 299 acres under currants, as compared with 1,931, 870, and 148 respectively three years previous. The rainfall is only about 9 in. per annum, but a plentiful supply of water is obtained by pumping from the Murray, the channels commanding an irrigable area of about 15,317 acres. In 1903 the returns from the sale of fruits amounted to about £100,000. Included in the output were 1,200 gallons of olive oil, 1,688 tons of raisins, 745 tons of sultanas, and 90,000 cases of citrus fruits. At Renmark somewhat similar work is being carried on. Over 3,600 acres are under irrigation, and maintain a population of nearly 1,000 persons. The value of the fruits and olive oil sold amounted to £15,000 in 1903.

The other States also furnish excellent opportunities for the prosecution of the dried fruit industry, and for the building up of a large export trade in raisins, dried currants, figs, and other staples peculiar to the isles of the Levant and the Grecian peninsula. Wherever the Spanish muscatel has been introduced it has proved a very prolific bearer; and, were it more generally cultivated, there is no reason why raisins equal to the finest obtained from Muscatel should not be produced. In the Muscatel district the raisins are said to bring the vignerons a profit of from £40 to £60 per acre, and, all the conditions being fairly equal, the Australian-grown product should yield proportionately high monetary results. The main obstacle to the development of the dried-fruit industry in Australia generally is want of knowledge and inexperience on the part of both vignerons and fruit-growers generally.

BLAGDON SHIRE HORSE STUD

Established 1879.

The Property of **Mr. CLEMENT KEEVIL,** Billington, Leighton Buzzard, Beds. (LATE OF BLAGDON, MALDEN, SURREY.)

"Lockinge Midnight" is the principal Stud Horse standing at home.

LOCKINGE MIDNIGHT, 19780.

17 Hands. Black. Foaled 1900. 13 inches of bone.

As will be seen by illustration this is an exceptional short legged weighty stallion with knees and hocks close to the ground, full of masculine character, which is an indispensable trait in an impressive sire. No stallion is better calculated to get the Shire horse that is so much in demand to-day. Weight comes with the double cross of that sound old champion "Prince William" (3956), and "Prince Harold" (14228), and quality from "Royal Albert" (1886) through his sire's dam 4770 "The Forest Queen" (Lord Wantage's); she is also the dam of "Lockinge Forest King" (15867).

"Lockinge Midnight" is a very sure sire; he is offered as a sound horse; in 1905 he was let to the Wirrell Farmers' Club; his Foals are prize-winners, close to the ground with a lot of weight, flat bone, and well feathered.

PEDIGREE.

SIRE, "LOCKINGE ALBERT" (15895)	**DAM, 24187 "LOCKINGE FLOWER"** by "Prince Harold" (14228), for which Lord Llangattock gave £2,500.
G. SIRE, "PRINCE WILLIAM" (3956)	**G. DAM, 15087 "LADY TOUCH ME NOT"** by "Prince William" (3956), for which Lord Wantage gave £1,500 at two years old.
G. G. SIRE, "WILLIAM THE CONQUEROR" (2343)	**G. G. DAM, "SENSITIVE"** (Lord Wantage's) by "Sensible" (2304). "Sensitive" was a first prize winner at the Royal Show at Birmingham, also the winner of two firsts at Rugby.

NOTE.—"Lockinge Albert" was a prize-winner in London, 1904, and was sire of four prize-winners there; also of several First and Champion at the County and other Shows same year. "Prince William" was twice Champion at London and the Royal. "William the Conqueror" was also sire of "Hitchin Conqueror" (4458) and many other winners.

FEE £5 5s.

Also some good sound Sires at fees as low as **£2 2s.**

OTHER MASSIVE STALLIONS FOR SALE OR HIRE, SOUND AND WELL-BRED.

☞ **SHIRES OF BOTH SEXES AND THE BEST OF BLOOD ALWAYS ON SALE.**

For further particulars apply to the Bailiff, **EDWARD ALDRIDGE,** as above, or the Owner.

Telegrams: **Keevil, Billington, Leighton Buzzard.** Stations: **Leighton and Cheddington, L. N.W. Rly., three miles; Dunstable, G.N. Rly., five miles.**

Conveyances can always be had at either Leighton or Dunstable Stations.

N.B.—Stallions purchased from this Stud have proved the best of Sires, Mares exceptional breeders, and many have made their mark in the Prize Ring at the Royal, London, and also winners of Gold and Silver Medals at many County and other Shows.

JOHN HETHERTON, F.S.A.A., Managing Director.

EXAMPLE OF BENEFITS GIVEN.

For a premium of **£2 7s. 6d.** the policy-holder is fully protected for Twelve Months, and entitled to receive:—

£24 if the mare should prove to be in-foal and die before foaling.

£22 if the mare should not foal during the currency of the Policy, but turn out to be barren, and die at any time within the year.

£20 if mare should die from accident, disease, or foaling. Even if she foaled safely, was put to the horse again, and died as the result of a second foaling (premature or otherwise) during the year, we would pay this sum.

£4 if the unborn foal should be aborted AT ANY TIME.

£4 if the foal should die at or within one month after birth.

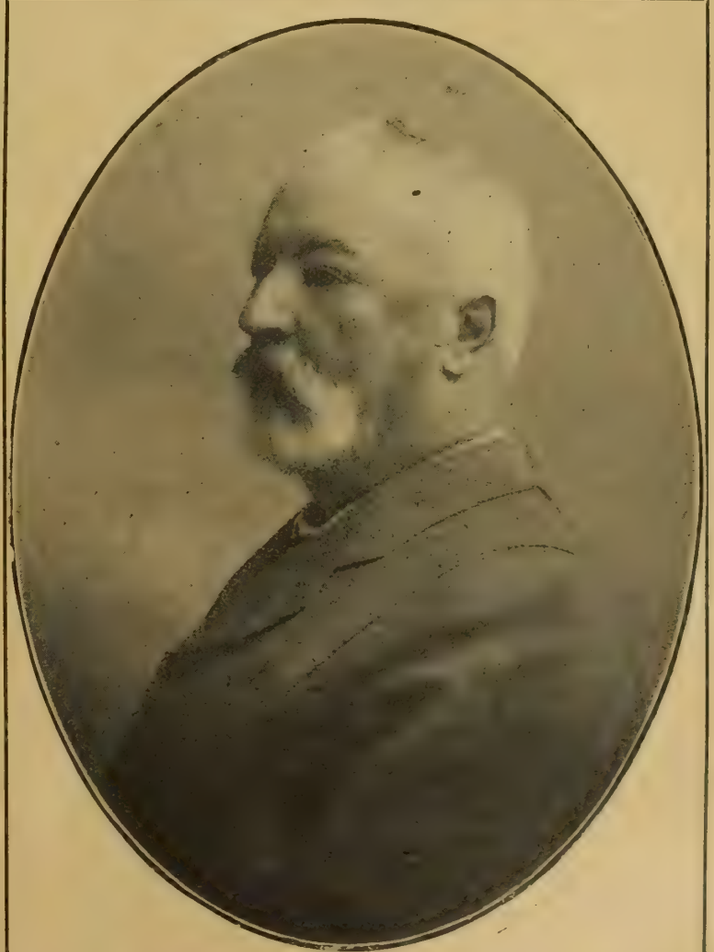
£4 AND **8s.** PER MONTH ADDED as a bonus after the foal is one month old, if the foal should die at any time before the Policy expires. N.B.—WE HAVE PAID (WITH BONUS ADDITIONS) more than double the sum originally insured in several cases.

£2 if the mare should not foal during the currency of the Policy, but prove barren. N.B.—The mare would still be held insured during the twelve months.

All for £2 7s. 6d.

No other Company gives all these Advantages!

Farmers and others are invited to act as Agents.



Mr. E. C. NORRISH—a successful exhibitor during the past year with his Devon Bulls "Level Best," "Master True Type," and "Fancy Free," all of which were bred on his Farm at Sandford, near Crediton, North Devon. Representatives of this Herd are at all times for sale.—Address, BLACKHAYES, SANDFORD, CREDITON. Station and Telegrams, "Crediton."

WOOL A. & J. MACNAUGHTON Manufacturers, PITLOCHRY, EXCHANGE or MANUFACTURE WOOL into TWEEDS, COSTUME TWEEDS, BLANKETS, RUGS, PLAIDS, &c., with the most Modern Machinery, at Reasonable Charges. We pay Carriage of Wool. Patterns Free. We have always a large Stock of our Famed Tweeds and other goods for sale. Patterns on Application. LADIES' and GENTLEMEN'S TAILORING.

IMPROVED MOLASS FEED

In the recent action at the suit of THE MOLASSINE COMPANY, Limited, of 36, Mark Lane, London, against R. TOWNSEND & COMPANY, Limited, Royal Cake Mills, Stroud, for an infringement of a patent (for mixing Peat and Molasses as a food for cattle), originally taken out by Mr. Wilhelm Schwartz, and afterwards transferred to the plaintiffs—

> It was held that we had infringed the patent by mixing Peat with Molasses in the manufacture of the Molass Feed sold by us.

Under these circumstances we have, in submission to the decision, entirely discontinued the use of peat in any form, in the manufacture of our Food, which will henceforth be prepared of Molasses and Grain with other suitable products which produce a Food of High Feeding value.

During the Legal Proceedings a report on Molass and Peat Fodder, issued by the FOREIGN OFFICE, was brought to our notice, and we give the following extracts for the purpose of showing that the absence of Peat from our Food is of no practical importance.

Extracts.

A factory has bee quite recently opened in Stettin for the manufacture of "Peat-Molasses-Fodder," or "Molasses-Mull," according to the patent of W. Schwartz. The manufacturer, Herr Ludwig Boldt, has obtained the sole right from the patentee for the province of Pomerania. The Molasses-Mull-Fodder costs 2s. 2½d. per cwt., free to station or f.o.b. Stettin.

No physiologist of plants would admit that a peaty substance can have a nourishing value and it is very easy to convince oneself by an experiment, viz, by giving some animals 4 lbs. of pure molasses and others 5 lbs. of Molasses-Fodder (4 lbs. Molasses and 1 lb. Torf-Mull). According to my experience the result in both cases was the same, which proves that the sugar is the chief factor, and that the Torf-Mull —quite apart from the fact that it acts, in time, sluggishly, and therefore prejudicially, on the digestive organs—was given uselessly. But as feeding with it is not free of cost, it must be disadvantageous to the farmer's purse.

"Cakettes" FOR Cattle

(Bibby's Patent).

No Trouble. No Waste. No Extra Cost.

BIBBY'S NEW METHOD of Manufacturing Feeding Cakes.

It has been our good fortune, from the commencement of our business career, to have led the way in the production of high-class Feeding Cakes; and our "BIBBY" CAKE, BIBBY'S FEEDING CAKE, and BIBBY'S DAIRY CAKE, with their corresponding Meals, have now for many years taken the first place in popular favour.

We have recently taken another step forward, and have invented a process by which the Feeding Cakes can be turned out in the form of "Cakettes," as shown in our illustration; it is obvious that this improved method of manufacture will save a good deal of time to the Feeder—and what is more it costs him nothing.

So excellent an innovation has attracted the attention of a great many Cake users, and naturally more or less plausible imitations of our "Cakettes" are beginning to loom on the horizon.

We do not complain of this in the least, so long as the Feeder knows exactly what he is buying; for no one is quicker than he at discovering the difference in value between an original piece of work and a more or less successful copy. For the same laws obtain in commerce as in art; and all artists begin by copying the work of the masters in the craft.

But a caution is necessary; no connoisseur of art expects the same perfection of detail in a copy as in the original picture; and a user of Feeding Cakes, when buying an imitation of our "Cakettes," should not conclude therefrom that he is getting a Cake of our quality.

We have been catering for many years for those Feeders who demand—and who will have—

The Best Feeding Stuffs the Market affords;

and we maintain a staff of Chemists and an Experimental Farm, researching all the time after improvements in all directions; and it must be manifest to all that this line of policy is bound to yield the best results obtainable, a fact which any observant feeder will discover for himself if he make careful tests.

We may add that all the most approved methods of producing Cake in this form have been patented by us, and not only is the quality of our "Cakettes" the result of years of the most painstaking research, but the pieces themselves are more regular, shapely, and more satisfactory in every way than can be otherwise obtained.

We have, therefore, thought it but right to bring these facts under the notice of feeders, so that buyers who really want our "Cakettes" may not be put off with an imperfect article, and particularly as the genuine thing can be had at the same price.

We have registered the word "Cakettes" to describe the results of our improved method of manufacturing Feeding Cakes; and buyers who want our "Cakettes" should see that the word "Cakettes" is plainly marked on the bags, as shown in our illustration. If the word "Cakettes" is not on the bags, and you have been sold something "Just as good," we recommend that a practical experiment be made to test the quantity and quality of the milk which they severally yield, for the stomach of a cow is a handy and reliable chemist; and the more the farmer submits the claims of rival Cakes or Meals to practical tests of this kind, the more careful will he be to select the original article, however plausible a copy of it may be recommended to his notice.

IMPORTANT NOTICE.

To Readers and Advertisers.

In consequence of Monday next being Christmas Day, the MARK LANE EXPRESS will be published on FRIDAY, DECEMBER 22.

All communications for that issue should reach this office as early as possible, and in any case not later than by first post on FRIDAY MORNING NEXT.

THE COMING ABUNDANCE OF MAIZE.

Towards the close of August it came to be generally known that the maize crop of the United States this year was likely to be a record one. September and October added to the promise, so that when on November 11 last the official figures were published at Washington, no great surprise was expressed at a surplus allowing not less than three hundred and twenty million bushels to be exported. None of this vast extra store has yet left America, because maize is a crop which requires two months to dry after the cob is detached from the stem. But from the beginning of January new American maize will be in evidence at Mark Lane, and early samples will be shown there before Christmas. It therefore becomes highly important that we should make up our minds how to deal with this undoubtedly valuable foodstuff. Maize, says Hassall, in his famous work on "Food," contains more fattening materials than flour from wheat, than milk, than beans or peas. In the matter of carbo-hydrates it is richer than oatmeal, one of the most nutritious of foods. Evidently it is an article that our analysts and scientists, our Voelckers and our Dyers, may teach us how to use, and principally how to utilise it as part of the dietary of live stock, of poultry, and of other birds. If we do not buy America's maize, the United States will use up the great surplus at home, and we shall have a later but severer invasion in the form of maize-fed American bacon, maize-fed American poultry, patent American farinaceous foods and flours, and forms of meal, of all of which the basis will be maize.

On the other hand, an all but limitless supply of a fattening and nourishing feeding stuff at a guinea for 480 lb. is a real incentive to increased industry on the home farm. The price is very little over a halfpenny per lb., and there is very little fear of loss on unsound corn, the great maize-producing districts of America having this year had perfect weather for the ingetting of the crop.

Now, the first use of which cheap maize is capable is that of being fed, with skim milk, to pigs on the farms of the United Kingdom. Recent experiments with the use of skim milk have shown the exact proportion which can be profitably combined with maize, and, with respect to the latter, good may be done by feeding it to pigs in various stages of fineness, from simply bruised or half-broken corn to a comparatively fine meal. How to feed maize to pigs to best advantage would make a very useful leaflet for the Board of Agriculture to issue.

If plentiful maize enables English and Irish farmers to contest the trade in pork and bacon in 1906 and keep out foreign pigs, the prospects of the agricultural interest will have been appreciably bettered in the course of the year.

With respect to poultry, farmers are still far too prone to regard that industry as one for the women to take up as a hobby possibly, but a trifle beneath the dignity of agriculture proper. The result of this attitude is seen in the enormous tribute which we pay to foreign countries for their poultry and for their eggs. If our poultry are well fed with Indian corn, we ought to be able to make up for the more genial climate of France, and to contest the poultry market with home supplies. Continental countries are unwise enough to tax maize, which is raw material of the very highest value to the farmer in temperate climates. Whilst speaking of poultry one may be permitted to wonder why pigeons are not more extensively bred for the table. If one wants a fat pigeon, a Bordeaux bird has to be bought. Is this not absurd? Pigeons delight in maize, and the cheapness of a favourite food should in 1906 lead to these being kept and fattened for Leadenhall Market on a scale not known to previous years.

With reference to maize for horse food, great care must be shown. The stamina of heavily-worked horses can only be kept up where heavy oats, good beans, and the like are a part of the ration, and any tendency to give more Indian corn than before because it is so cheap is to be deprecated as pound foolish in its penny wisdom.

For human consumption maize has its uses, but it is too fattening for adults to take in any large quantity with advantage, and is chiefly useful for growing children. Family men might do well to buy a sack of maize flour at 19s. per sack, and divide it between three or four families. In fancy cornflours and the like, which are merely maize flour rather too finely ground, they are paying at the local groceries a price four to five times that of the actual article at Mark Lane.

The ruthless destruction of wild flowers in Devonshire has caused the County Council to apply to the Secretary of State to sanction a by-law with a view to their preservation.

At the annual meeting of the Norfolk Agricultural Association, held at Norwich on Saturday, it was stated that the revenue during the past year had been a record one, amounting to £3,349, of which £1,449 had been distributed as prizes. The invested reserve fund had been increased by £550, and now amounted to £3,454. The election of the president for the ensuing year and the selection of the scene of the next summer show were deferred.

Seasonable Topics.

The mind has to go back some years to remember the time when there was a general movement in favour of draining land. To be quite exact, it was in that disastrous period in agricultural history when we had a cycle of wet summers followed by hard winters, the results of which shook well established farmers, and brought many to the ground who were working on small capital. A good deal of draining was done about that time, but the dry seasons experienced of late years seem to have done away with the necessity of this operation, and we have heard more complaints about the scarcity of water rather than a superabundance of it. In spite of all this, however, we frequently see land that would be all the better for draining, and one wet season would make the necessity all the more palpable. One need not be a scientist to understand that water-logged land is cold, because the rays of the sun are engaged in evaporating the water instead of warming the soil, and, again, when water is evaporated from the soil the ground is left considerably colder than it the moisture passed away by filtration. Further, air is necessary in the soil, and when the land is full of water, it is practically sealed against air, hence the necessity of draining. By the lay of the ground, and the character of the herbage which grows, any practical man can indicate when land wants draining, but one cannot always lay hand on a man who is capable of carrying out the work. Years ago the writer had a good deal of draining work in hand, which was performed by a gang of thoroughly capable men, acting under a chief, who contracted for the work, and did it in an efficient manner. When a lull came in the draining work in the district the gang separated, some left the place, a few are dead; and now, if the same kind of work had to be carried out extensively it would not be an easy matter to secure men so thoroughly capable as the members of the old gang. It seems to me that it is in work of this kind where the labour in rural districts has deteriorated, not so much in quantity, as there are plenty of men to be had now, as in what is really more important—efficiency.

Drainage.

* * *

With the mention of draining is connected another operation of almost equal importance, i.e., liming. The practitioners of a quarter of a century ago, or thereabouts, realised that to drain a water-logged grass field, which grew rank wiry grass and rushes, was not in itself enough. It is true the draining served as a means of carrying off the superfluous water, and where the mouths of the drains have been kept open, they still serve this useful purpose, but something was wanted to sweeten and purify the land, and set the sweeter and more palatable grasses into growth. The material which affected this object was, and still is, lime, and the custom was after draining pasture land to allow the farmer lime, he to do the hauling and spreading. What a traffic there was in this commodity can be seen by the many now disused lime kilns, which are still to be seen about, and it used to be a common sight to see farmers' carts and waggons making journeys to and from the nearest kiln. Lime, however, seems to have got somewhat out of fashion of late years; perhaps owing to the extended use of basic slag and other cheap concentrated fertilisers. Be it far from us to say a word against the value of the latter, but we support the old practitioner in his faith in lime. During the past summer we were in a large field where the grass was eaten off bare by the cattle up to a certain line, that could be easily traced across the pasture. We made enquiries, and learned that some ten years ago the land was drained and limed, but the quantity supplied by the landlord was not sufficient to cover the whole area. The short-sighted policy of the farmer would not permit him buying more lime to finish the field (though he could have got compensation if necessary), and the result was that the cattle would not go on to the unlimed part as long as they could get a bite on the portion of the land that was dressed. Not only was the former rather through not being limed evenly with the remainder, but it was further accentuated by not getting half the quantity of manure as the portion of the field where the cattle were frequently grazed.

Liming.

* * *

In the list of honours recently published we were pleased to observe that Lord Tredegar, the popular president of the Smithfield Club for the year, had been raised to the dignity of a viscount, and we feel sure that the high compliment thus paid to his lordship will meet with the approval of the agricultural fraternity at large. The Army may consider itself to have a claim on Lord Tredegar, who was one of the few who came safely out of that most glorious of military blunders the Balaclava charge—but for years his lordship has lived a quiet life as a British landowner, keeping up the family seat at Tredegar Park, Monmouthshire, in good old-fashioned style, hunting his own hounds, breeding prize cattle, and liberally spending his money in good works of all kinds. Lord Tredegar's show annually held at Newport is one of the agricultural events of the year, and the liberal way in which it is managed speaks volumes for its patron's interest in farming. In himself Viscount Tredegar is a reserved, unassuming gentleman, and a bachelor, but his name is one to conjure with in South Wales, where his good works are perhaps better known than elsewhere.

A Well-Deserved Honour.

SIR R. P. COOPER, BART.,
Head of the firm of William Cooper and Nephews, Berkhamsted.

It is very significant to observe that in spite of the great distress in towns and the growing seriousness of the unemployed question, at the late Martinmas hirings there was no undue overcrowding in the supply of labour, and though wages on the whole were slightly lower, as was expected, we have it on high authority that good servants were not easy to find, and that really good men had no difficulty in getting their own terms when the latter were within reason. Neither is it any over supply of men which accounts for wages ruling lower, but rather the inability of farmers to pay the former rates, and their reluctance to make promises for the future. Of course, the servants engaged at Martinmas hirings for the year are unmarried men, who are boarded and lodged on the premises, and it is in this class of labour that scarcity for some time past has been felt. Married men with families who are engaged by the week and live in farm cottages are more tied, but there are many inducements held out to young single men to leave farm work for the greater freedom offered in other vocations, but not always is the change really beneficial in the end, and it would be interesting to know how many of the unfortunate unemployed now idle in the streets of great towns began life on a farm, and left it for what seemed to them better prospects.

Labour Supply and Demand.

Though political fate has decreed that Mr. Ailwyn Fellowes' tenure of office as President of the Board of Agriculture and Fisheries should be one of short duration, every one will agree that for the past nine or ten months he has not been a mere figure-head, but, on the other hand, he has thrown himself heart and soul into the work of the office. It seems rather hard lines, when a man has just gathered up the reins, so to speak, and has got his team fairly going, that he should be obliged to hand over the ribbons to someone else; but such are the chances of politics, and in the same breath that we wish good-bye to Mr. Ailwyn Fellowes we welcome his noble successor, Earl Carrington. Of course, there are scores of people in the country who (according to their own views) could have made a much better Cabinet than that just formed by Sir H. Campbell-Bannerman, but we hear few complaints about the selection of Earl Carrington as the Minister of Agriculture. Not only is Earl Carrington a Liberal peer, but he is also a liberal landlord, and what he has done in the interests of small holdings is a matter of common knowledge. He is also a man of parts, having done good work on the London County Council, and as Governor of New South Wales (1885-90). In a word, Earl Carrington is a man of wide experience and practical ability, and we venture to think that in his hands the Agricultural department of the new Government will be safe.

Political Changes.

* * *

Before us, as we write, is a report of a disastrous farm fire, in which a range of cowsheds was burnt to the ground, and nearly fifty valuable beasts perished in the flames. The actual cause of the fire is unknown, but it is suspected that a tramp seeking shelter for the night must have started the flames by dropping a lighted match or burning tobacco from his pipe. It seems natural when a farm fire occurs, and the actual cause is unknown, to suspect a tramp, because it is well known that members of this troublesome fraternity have been responsible for a good many disasters of this kind. The difficulty of what to do with the unemployed is by no means so great as that of how to deal with the habitually idle and unfit, and to this fraternity the professional tramp belongs. The rules of the casual ward are now so severe that he shuns this means of nightly shelter, and if he fails during the day to beg the requisite coppers to pay for a cheap doss at night, he prowls round barns and haystacks in search of the requisite shelter. Naturally the farmer trembles when he sees a tramping loafer hanging about his buildings at nightfall, because he knows how careless these men are in the use of matches and lighted pipes, and he fears for the welfare of his property. The day will surely come when the question not only of the unemployed, but the unemployable, will have to be dealt with, for the numbers of living parasites who, dead to all decency and self-respect, will not work, but prey on their fellow men, are on the increase.

Farm Fires and the Tramp Nuisance.

The continuous growth of County Council expenditure was the chief matter discussed by the members of the Warwickshire Chamber of Agriculture at their annual meting. The matter was brought forward by a member (Mr. Lea) moving the following resolution:—"That this Chamber views with dismay the continuous and alarming growth of expenditure by County Councils and other public houses, as shown by the progressive increase in the rates, and begs to draw the attention of the chairmen of those bodies to the grievous burden entailed on the agricultural industry, which so largely contributes to the county and other rates, and the urgent necessity there is for a more careful exercise of economy by the spending committees of public bodies." He said that twenty years ago the county rates came to 10d. each half-year, and they had risen in 1905 to 2s. 2d. and 2s. 6d. per half-year on buildings, and 1s. 1d. and 1s. 3d. on land. For about ten years the county roads cost £24,000 a year, and now the cost stood at £37,500. The quantity of road materials had risen from 33,000 tons in 1894 to 42,000 tons at the present time. The farmers could not possibly bear this increasing burden. Mr. Madeley Burman, seconding the motion, said the roads were too good for ordinary agricultural traffic, and those for whom they were made as level as a billiard table—the motor car owners—ought to pay for the improvement. Several other members spoke in favour of the resolution, and it was adopted. Sir Hugh Gilzean Reid was elected chairman for the year.

CHANGE OF ADDRESS.

Will readers kindly note that we have removed to larger and more convenient Offices and that in future our address will be—

3, WELLINGTON STREET,
STRAND, LONDON, W.C.

Telephone—3665 Gerrard. Telegrams: "Certitude, London."

Agricultural Politics.

BY A LOBBYIST.

So the appointment of Earl Carrington to the Board of Agriculture is the realisation of an anticipation which will be grateful to the farming interest. The appointment of Mr. John Burns to the Local Government Board is in the nature of an experiment. "Are you going to introduce the note of discord into the general appreciation which has greeted the appointment of Mr. John Burns to this position?" Well, I have yet to learn that Mr. Burns has even the slightest comprehension of the intricacies of the rural side of local government. That he has been a forceful boanergesian personality on the London County Council is undeniable. That he is the most significant advocate of the policy of municipal collectivism cannot be denied. That he has been the most acclaimed denouncer of the old order in municipal government—the old order which was chary of extending the principle of municipal ownership—is apparent to all. Cosmopolitan, however, as the man is, acquisitive as is his mental capacity, student as he ever has been, I have never yet heard that the hero of Battersea has been able to curb his impetuous temperament to a study of the rural phases of the local government problem. My fear is that the Local Government Board will become under his regime a mere urban organisation. Its care will rather be the pulsating urban municipalities, and the development of their activities—despite the warnings of men like Lord Welby and Lord Avebury—in the possibly dangerous sphere of municipal ownership and collectivism. I fear that the rural areas will be regarded, not merely as a subsidiary interest, but as not requiring the disciplined attention of the town municipalities.

• • •

Of course, the Right Hon. John Burns is a very different personage to John Burns the sans-culotte. He is no longer the vivid Henry Georgian, no longer the declamatory demander of the nationalisation of all the means of production and distribution, no longer the man who hits his sublime head against the stars in ambitious perfervour and impossible anxieties. He certainly roars at intervals, but this is because his larynx is sound and his lungs unimpaired; but the roar expresses a comparatively mild purpose. The character of the latter-day Burns was best illustrated by his own picturesque criticism of the fatter-headed visionaries who fancy that their cry "Back to the land" indicates the panacea for all the social ills flesh it heir to. The Right Hon. John has, after all, long since allied sanity to his native enthusiasm; and he knows perfectly well that the belief that to forcefully migrate the human wastrels and unfortunates of the street corners to waste land, or even farm colonies—their migration having been without any prefatory training, and they having been thus divorced from all the methods and life of the past—would not only be a folly but a crime. You can't fashion a useful rural labourer, a man who can earn his living on the soil, by the mere boisterous assurance of some tempestuous Socialist orator. You don't create good labourers by violent phrases and turgid rhodomontade. This attitude on the part of Mr. John Burns is certainly more or less a good omen. Yet I mistrust the appointment—not certainly because of any belief in the want of ability in the man, or because of any inappreciation of his strident, ever-working, never-lazying character, or because of my fear that he has not shed his old intransigeant character. As a fact, so far as Labour men are concerned, Mr. Burns is, his collectivism notwithstanding, a distinctly conservative force in our midst. Hitherto, however, the Local Government Board has generally been regarded as a rural appointment. For instance Mr. Walter Long's accession to it was regarded as in the natural order of things. Mr. Burns is of the town towney. He exhales the urban temper; he has nothing of the somnolence of the villagers. Still John has shown the capacity to learn. I pray it be not exhausted.

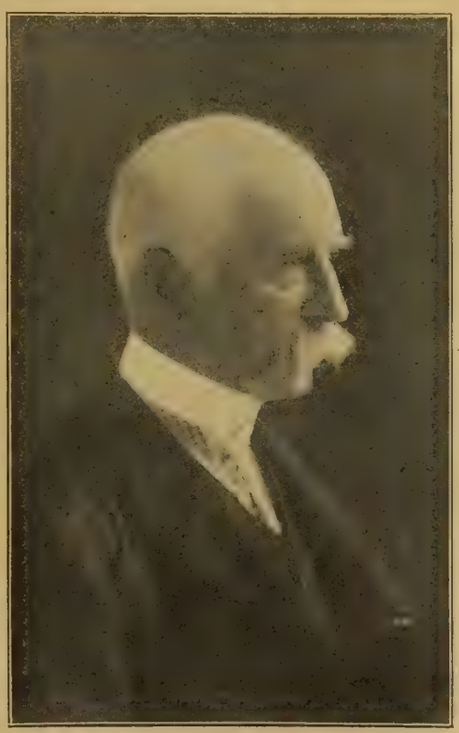
One of the regrets associated with the appointment of Earl Carrington to the portfolio of Agriculture—perhaps, the most opposite of



THE RIGHT HON. VISCOUNT TREDEGAR,
Tredegar Park, Monmouthshire.

the whole nineteen Cabinet appointments—is that his natural Parliamentary gifts will be somewhat cribb'd and cabin'd in the atmosphere of the Lords. Earl Carrington is like Guaga Din, "he doesn't seem to know the use of fear." The very altrition of the House of Commons would move him to a bolder policy. One of my arguements against the bestowal of a great administrative office upon a peer is that the conventional, soothing, placid atmosphere of the Lords may induce to a policy of routine and commonplace. Even a strong man might be lulled by this environment into a condition of acquiescence of the things that are. Separated from the quickening influence of interrogations and debate, a statesman, even of the best reforming intentions might relapse into the mood of acceptance. Of course, it was conception of this that led to the protests, on the resignation of Lord Onslow, against the office being given to a peer. I am bound to say that Earl Carrington's past—his establishment of a land court composed of his own tenants, his franker recognition than is conceded by the law of the principle of compensation for improvements, and his practical experiments in connection with small holdings—are as much an assurance as is the temperament of the new Minister that he will rise superior to these influences. I know him personally to be vigorous in administration, to be full of the quality of genial resource, to be superior to that personal conceit which renders some men indifferent to suggestion, and to be always eager for work. The first sequel to his lordship's own ambitions should be a demand for the enlargement of the sphere of the Board of Agriculture. Let him insist that the English body shall have, proportionately, something of the economic moment of the Irish organisation. Then his administrative anxiety may have a sufficient scope.

• • •

One of the remarkable incidents of Lord Carrington's appointment is the enthusiastic appreciation it has provided in the West of England. Of course, the farmers of Devonshire and Cornwall are farther advanced in their agrarian economy than are the general body of farmers. Probably, this is due to the continued influence of the Callington platform. Be this as it may, at their dinners and the like these Western farmers refuse to nibble the dry-remainder-biscuit of out-of-date ambitions and commonplace purposes. In the series of dinners which have been held since Lord Carrington's appointment, something in the nature of warm-hearted confidence—all the more significant because having its origin in no partisan faith—has been expressed in the new Minister's prospective administration. His very unconventionality of character is held to be an asset of the farmers, inasmuch as it may induce him to refuse to proceed along the grooves of the not very valuable past, and persuaded him to follow his own natural instincts. His frank bonhomie and graceful courtesy are accepted as an assurance of his approachableness. His own past work on the field of reform—confined though it inevitably has been to his own estates—is held to be an indication that he has convictions as to the economic necessities of the land, which, by no means spoliative in their character, must, if generally applied, make for the betterment of the condition of the ordinary farmer. It is already certain, indeed, that in the West Lord Carrington is expected to infuse something like vitality into the framework of the Board of Argiculture, and to build upon it a flesh-and-bone fabric of usefulness.

• • •

Are these anticipations—personally gratifying as they may be—altogether to the advantage of Lord Carrington? It is an ill-portent for this Ministry that it has been marked out by the varied bodies of its friends to do so much. As a sequel to this, it may become sterile. By reason of its selfish clamour for precedence the very channel of its output may become choked. Passive resisters, anti-brewers, anti-Chinese, Labourites, military all vociferously demanding that they shall have the first place in the purpose of the Government. Some sections must be baulked. Of course, at the same time, Lord Carrington, though generally responsible as a member of the Cabinet, is in a large measure divorced from these revalores. Hence it is that, in the administrative sense, he will have a freer and less trammelled opportunity of realising whatever purpose he may set himself. Still, I repeat, that the anticipations associated with him are not altogether an encouragement. Some of them are pre-doomed to disappointment. Besides, as in the enthusiasm which they have apparently assumed in the Western shires, they scarcely calculated to allow the Earl opportunity to carefully examine his position. Of course, Lord Carrington has come to the office at a significant moment in the position of organised agriculture. He has come to it at a junction when farmers are showing a growing inclination—the inclination, by the way, has not had a vivid enough expression yet—to release them-

"The Agricultural Annual and Mark Lane Express Almanac for 1906" is now ready. It contains specially written articles on all subjects of interest to a farmer. Send at once for a copy. Price 1s.; post free, 1s. 4d. "Mark Lane Express" Office, 3, Wellington Street, Strand, London, W.C.—[ADVT.]

selves from the trammels of partisanism. Associated with this inclination is a deepening resentment of the neglect which characterised the administration of agriculture in the last ten years. Say, if you like, that this means that the field of administrative and legislative reform is white unto the harvest. It means also, in a subordinate degree, the aggravation of Lord Carrington's difficulties. Pray let us not forget that he is a member of a Government with many preoccupations. Still, administratively, he may do something. He can realise, perhaps, the anxieties of Mr. Hanbury with which Mr. Ailwyn Fellowes revealed so admirable a sympathy.

• • •

There is one appointment in connection with Lord Carrington's position which will inevitably deepen generous expectations in certain of the Eastern and the Midland counties. This is that of Mr. R. Winfray as his unpaid private secretary. Mr. Winfray is an alderman of Peterborough, an active land reformer, a Liberal candidate, and has been Lord Carrington's associate and lieutenant in his smallholding and agrarian experiments. He is a man who possesses, beneath a dulcet, courteous exterior, an emphatic purpose. He is a small-holder advocate as resolute and practical as Mr. Rider Haggard himself. His economic outlook is not confined to small holdings; but it is in this role that he is most accepted, and in which he has made oratorial appearances at the conferences of the Land Law Reform Association. I accept his association with Lord Carrington as corroborative evidence that the improvement of the attractions of village life—and, of course, Lord Carrington has shown himself to be convinced that a brightening of the social and domestic side of village life is essential in any scheme of redemption—will be one of the earlier ambitions of the new Minister, and that he will not hesitate to invoke the financial aid of the State in realising it. Small holdings, allotments, and housing reform have long been anxieties with Lord Carrington. Aye, and I can assure his lordship that landlords and farmers are anxious to learn to what extent, and under what conditions, he will enable them to borrow from the State, in order to realise this purpose on their own estates and farms. Earl Carrington may be expected to go as far as Mr. Jesse Collings, Sir John Dorrington, and Sir John Kennaway, and even as far as Mr. Channing.

• • •

By the way, how long ere the new Minister will persuade the President of the Local Government Board to revise and harmonise the building regulations of the rural areas. I doubt that the man to permit the sympathetic anxiety of would-be cheap cottage builders to be frustrated by the vanity or the ignorance, or the self-assertion of some local prudet who happens to have been elected to the rural council, or of some ex-publican or ex-grocer who may have been appointed building inspector.

MILLING.

The flour trade has been very quiet during the past fortnight, and prices remain about the same, although in some parts there is a reduction of 6d. per sack of 280 lb. Offals are in very good demand, both for coarse and fine makes. In many places the demand exceeds the supply, and prices have slightly advanced. Most millers find no difficulty in keeping quite clear of these products. Home-grown wheat has been in moderate supply, and there is no change to report in prices. Owing to the damp weather, some of it has been received at the mills in anything but good condition. It is remarkable how damp affects this wheat, causing it to break up badly, causing more difficult purification and dressing, and a lessened yield in the mill. There are some good samples to be delivered yet, however, and with the advent of dry, frosty days, matters will greatly improve. There are plenty of foreign parcels now on British markets from which millers can make a choice. Indians and Russians still continue to come and other kinds available are Manitobans, Red Winter, Australian, and Plate. Canadian long berried and short berried New Zealand wheat can also be obtained, but their quality is inferior to Australian. The colour of the flours from these, however, is often fine, and the.r flavour sweet.

NORTHERN NOTES.

The prospects of the Royal Agricultural Society continue to excite very considerable interest, and the recent correspondence strengthens the conviction that an annual exhibition near London must ever be a failure. The North Countrymen from the very first opposed a scheme for a permanent location near London, because they considered a permanent location anywhere to be bad, and that the migratory system was to be preferred; and also because they considered that if the migratory system were superseded, London was not a suitable position to select, and that if permanency was necessary, the site should be in one of the populous districts of the Midlands.

They contended, and as advents have proved, rightly contended, that the Londoner does not take the very slightest interest in agricultural matters, while countrymen would not come to the metropolis every year to visit an agricultural exhibition there. A demand has been made for a plebescite, but if there be one, the result will be an eye-opener, for fully three-fourths of the members will support the policy of the new Council and call for its further development. It is advisable to adequately test the feeling of the members, a thing that has not yet been done

The holding of a meeting of the Society in London affords no test whatever—the majority of the farming members can ill afford the expenses incurred in attending such a meeting—and only a small minority put in an appearance. If the Council would only arrange for the holding of a really business meeeing of the members on the first or second evenings of the show, they would obtain a far better representation of the rank and file, a matter rather carefully avoided in the past.

The ordinary meeting of members in the showground on the second day of the annual exhibition is a very futile affair, as little business being brought forward as possible. When the proposal to locate the show at Park Royal was still in its incipient stage, the society held its annual meeting at York, and the outside members determined to force a discussion, and would have done so in spite of all opposition had not his Majesty the King (then Prince of Wales) occupied the chair. It was felt that it would be unseemly to force the matter when he was in the chair, and so the opportunity was by common consent allowed to pass. But it was the only opportunity—a year later, things had gone too far.

One of the questions now before some of the northern farmers' clubs is the meagre form of certificate given by a district analyst who has analysed a sample of feeding stuffs taken for analysis pursuant to the Fertilisers and Feeding Stuffs Act, 1893. A sample of what purported to be a 95 per cent. linseed cake was sent for analysis, and the district analyst declared the result of his analysis to be, "I am of opinion that the sample conforms to the description given on the invoice." The County Council, who employ this analyst, were asked to cause further information as to the constituents of the cake to be given, and in reply simply stated, "the analyst gives all the information the Act directs."

This statement is perfectly accurate, as Section 5 (3), of the Act of 1893, enacts, "The certificate of the district analyst shall be in such form and contain such particulars as the Board of Agriculture direct," and the Regulations of the Board do not require the analyst to state the percentages of nutritive and other ingredients present except when the invoice, or some circular or advertisement, sets out such percentages.

When it is remembered how greatly the "percentages of nutritive and other ingredients" in two samples of pure linseed cake may vary, it is seen how very serviceable and valuable such a certificate of analysis is to the sender of the sample.

Compare the subjoined analysis of two samples of linseed cake, both certified as pure:—

Moisture	7.69	..	14.32
Oil	6.23	..	12.30
Albuminous compounds	28.75	..	32.34
Mucilage, Woody fibre, etc.	50.89	{	30.72 / 6.28
Mineral matter (ash, etc.)	6.44	..	4.04
	100.00		100.00

Valuing these constituents at standard prices, there is a difference in value of at least 15s. a ton, even if the percentage of mucilage in sample A is assumed to be 34. Yet if the certificates of the analyses give no further information than is required by the Regulations of the Board of Agriculture, both would be certified as "conforming to the description given on the invoice."

Members of most farmers' clubs can get detailed analyses free through their clubs, or, at the most, at no greater cost than the fees they pay for analyses through the county councils. Is, there, then, cause to wonder that farmers prefer to obtain detailed analyses through the clubs instead of the meagre information obtainable through the county councils and the district analysts? Yet some of those in high places rail at the supposed apathy (?) the farmer evinces to the Fertilisers and Feeding Stuffs Acts. He may well regard analyses under that Act with apathy and yet be keen enough on obtaining detailed analyses through his club or other available sources.

The finger of scorn has been pointed particularly at some of the Northern Counties, where there is little resort to the Act of 1903, but here there are many clubs which worked out their own salvation in these matters before 1893; one such club has a membership of over 500, several of over 100, and they prefer to rely on the procedure that has hitherto served them so well. M. Y.

December 15, 1905.

The Right of Landowners under an Old Act.

A case of interest to owners and occupiers of land came before the Chertsey Bench on Wednesday. An "ex parte" application was made by a solicitor with regard to some deserted land at Byfleet. The Clerk: Why, the application is made under an Act dater 1737! A magistrate: But has not that been repealed? The Clerk: No.. The solicitor: There was an amending Act. The section of the Act dealing with the case was read.

This stated that if a tenant was in arrears for a half year with his rent, and allowed the land to remain uncultivated or unoccupied, so that no sufficient distress could be levied to counteract the arrears of rent, and also refused to pay rent for the same, application could be made to the magistrates for delivery of the land to the landlord. Two magistrates could then view the land and affix a notice as to the payment of rent. Then at the expiration of fourteen days they must visit again, after which, if the occupier did not come forward, an order of delivery could be made.

Mr. Otter (a magistrate): Are you sure that the Act has not been repealed in any way? The solicitor: Yes, but there is an amending Act. Evidence having been given, the Bench appointed two magistrates to view the land.

Agricultural Imports.

The following is an account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended Dec. 9, 1905, together with the quantities, emported in the corresponding week of the previous year:—

	1904.	1905.		1904.	1905.

Midland Notes.

The year is closing with farm work more in arrear than anyone thought likely at the beginning of winter. Four hundred or more tons of water per acre, which many districts received during November and the early days of this month, are not easily absorbed into the ground, and the damp air prevents evaporation. There is gradual improvement, but even now country roads are in a sad state, and carting in many places is altogether impracticable, for the land will hardly bear a horse. Only here and there has it been possible to make any substantial progress with seasonable tillages, while many fields which were intended for wheat still remain undrilled, and in the end will probably be diverted to other purposes. January is not a favourite month for sowing, even if it sees the land in good condition, and after then spring corn claims attention.

One hears not a few complaints of mangels failing to keep well. Probably a greater number were slightly touched by frost than was supposed when the cold spell so suddenly descended upon us; certainly blackening in the clamp is more common than one cares to see. To-day another turn of sharp weather is the one great thing to be desired, for we are in the thick of the Christmas sales, and a change is needed to put life into the beddings. Not that there has been much to complain of so far; indeed, the satisfactory times, prices paid at some of the earliest sales, and noted in this column last week, have been well maintained since. But a wek of frost would help to make the trade still more remunerative, and feeders in the Midlands have not been doing so well lately that they can afford to give anything away.

What are the Chambers of Agriculture and Farmers' Association doing to press forward the agricultural programme? Very little, I fear. The Warwickshire Chamber has invited Mr. Oscar Bowen to outline a scheme of common action at its next meeting, which will not take place until the fight is all over; the Worcestershire Chamber has taken no practical steps, and one does not find any very genuine appreciation of the needs of the moment on the part of the neighbouring chambers in Stafford, Northampton, Leicester, Nottingham, and elsewhere.

Yet the Midlands are well equipped with organisations, through which farmers ought to make their influence felt. On the west, Hereford is only just forming a chamber of agriculture, and on the other side little Rutland and Huntingdon are chamberless. But altogether there are a score or more of chambers of agriculture, farmers' clubs, and associations, not reckoning the non-combatant bodies, whose sole aim and object of existence is the running of county and local shows. There is not one of them which ought not now to be a centre of political activity. By sad experience, farmers have learned that they must agitate if they would get the attention which is their right. But they must know on the other hand that the agricultural vote is too formidable a power in county constituencies to be rashly offended, and now is the time for farmers to show by deeds, as well as words, that it will be given to no candidate who will not accept and pledge himself to support the measures of reform which they have laid down as an irreducible minimum.

There is no doubt among individuals as to what is needed. Almost everywhere the ten items of the MARK LANE EXPRESS programme find general acceptance, and where additions are made they mostly take the form of a demand for consolidation and improvement of the Agricultural Holdings Acts, or the extension of "Eastern custom" to other holdings besides market gardens. But it is not enough to be agreed upon principle; conviction must be backed up by acton, and the action must be organised and emphatic. The publicans' motto, "our trade our politics," need not be the farmers' too, but it illustrates the spirit in which the latter should go to work; and he may do so without compunction, since to restore the agricultural industry to prosperity would constitute as great a service to the country as any political party could render it.

November 14, 1905.

The trustees of Harwarden estate have offered, on behalf of Mr. W. Gladstone, four prizes, of ten, seven, five, and three guineas respectively, for the best managed farms on the estate. Entries are to be sent in before next midsummer rent audit. The judging will be done by a competent practical farmer, and among the subjects he will be instructed to consider are general management of stock and crops, and especially the live stock bred by the tenant, care of farmyard manure before its application, management of dairy and poultry, and methods adopted for economising labour and meeting the changing conditions of farming.

FARM.

Lord Carrington's Small Holdings in Lincolnshire.

The annual meeting of the South Lincolnshire Small Holdings' Association was held at Spalding Corn Exchange on Wednesday. The association hold 650 acres of land under Lord Carrington (the new President of the Board of Agriculture), all of which is cut up into small holdings and occupied by just over 200 tenants. In connection with the further development of the small holdings movement on Lord Carrington's South Lincolnshire's estates cottages are now being erected on some of these farms.

Mr. R. Winfrey (chairman of the association) presided over the gathering, and was supported by Mr. H. R. Mansfield, M.P. for the Spalding Division, Sir Thomas Fowell Buxton, and Mr. Christopher Turnor, and there was a large gathering of the tenantry. A letter was read from Earl Carrington, in which his Lordship spoke of the small holders in that district as being pioneers in the movement, and said that by their thrift, courage, and industry, they had set an example to the rest of England. People were beginning to see that there was room for them all,, and that England would be none the worse if the labourers could obtain small pieces of land at the same rent as that paid by the farmer. Referring to the erection of houses for the small holders, he said that nothing would show the practical working of the small holding system more than the fact that the tenants demanded—and rightly demanded—better housing accommodation, and that they were willing and able without inconvenience to pay a sum as rent equal to 4 per cent on the money invested in the building.

Sir Thomas Fowell Buxton, speaking with reference to the small holding movement, said that it might be thought that some of the land which had been occupied with large farms might usefully be divided up and worked, not by labourers earning wages, but by those who had a definite and personal interest in the prosperity of the land. They could not help noticing that there was a terrible loss through people leaving the country and drifting into the towns, and anything which tended to brig about the enlargement of the the population in the country districts would be a good thing and worthy of their encouragement. He congratulated Earl Carrington upon his appointment in the Government. His lordship had had great experience on agricultural matters, and he wished him a very prosperous career of office.

Mr. H. R. Mansfield, M.P., and others spoke and congratulatory references were made to Earl Carrington's appointment as Minister of Agriculture.

Mr. Rider Haggard on Land Settlements,

On Monday afternoon Mr. Rider Haggard gave an address on "The Poor and the Possibility of Land Settlement at Home and Abroad," at a meeting of the Council of the Charity Organisation Society. Mr. Haggard said he thought the members of the Society would agree with him that, though charity was very good and helped many a person in a hard place it was no cure for the mass of poverty which existed in this country. They might as well try to make the Sahara Desert fertile with a watering-pot as attempt permanently to lessen the amount of poverty by means of doles of any kind. His object was to suggest a more excellent way, a way by which they might more or less get at the back of this state of affairs and cut those evils at their source. His idea was that this could be done by homeland settlements, by emigration, and by land settlements in the British Colonies. By homeland settlements he did not mean artificial colonies af small holders; he did not quite mean that; he mean rather giving facilities to the labouring classes who were in the country still to acquire land either by renting it or by purchase.

There were such communities in England, and wherever they existed the exodus to the towns had very largely abated, and there was more prosperity than in other places. In such instances the agricultural housing question settled itself more or less, because these small holders, by hook or by crook, managed to build their own houses. He saw no way out of the housing question on the land except by people building their own houses, which they would only do if they were freeholders. This would not, of course, abolish poverty. Who could abolish poverty? But if it was done it would stop a great deal of future poverty.

It would be said there was a lack of land. When we knew there were so many thousands of acres going out of cultivation every year, and that half the soil was not properly farmed, it seemed absurd to say there was a lack of land for the people to work on. But still he was told by experts that it was really impossible to get land except at an impossible price. The cause of this lack of land was large farms and estates, the spread of sport, and the pernicious idea that had gone abroad that the land should only be occupied by the rich. He still thought that suitable land could be purchased; but if it really was the fact that it could not, then there was nothing for it but to establish some system by which it should be transferred on a fair valuation.

There was plenty of room in England for large estates and sporting places. Let there be pleasure districts and industrial districts; there was plenty of land that could be made available without disturbing the tail of a single pheasant. It came to this, that the small holder and his wife could not be perpetually kept out of the rural Eden which he once occupied, by an angel in velveteen with a double-barrelled gun. Then there should be co-operation, equalisation of rates, and some system of advancing money to deserving agriculturists.

Then, as reagards colonisation and emigration, he had been criticised severely by Socialist organs for wanting to take the people out of the country; but surely it was better to take out of the country some of these pepole who were rotting in the cities than to leave them to rot. Least of all men he was in favour of depopulating the country, but when the people were in the towns and there was no opening in our own country, while there was an opening abroad, surely it was wrong to stand in their light and say they should not go because it would depopulate England. In his opinion we had to choose between reform and great troubles in the future. There were great forces arising, and it was well to spread them out over the land.

Mr. Spear on the Promotion of Agriculture,

Speaking at the Market Ordinary, held in connection with the Launceston Fat Stock Show on Wednesday, Mr. J. W. Spear, M.P., made some interesting remarks on agricultural matters. He said that if farmers were to have a successful industry they must keep an eye on the changes that were taking place. It had been suggested that the restrictions on the importation of foreign cattle into this country should be removed, but he thought that that would be very dangerous, in that it might throw them open to the danger of importing diseased cattle. If the graziers of this country found that grazing did not pay them, a great body of opinion would swing over in favour of the free importation, and they should study to do all they could to retain in the hands of the British agriculturists the production of store stock for this country.

Since agriculture was, after all, the greatest industry in this country, it behoved every man to do his utmost to promote its success. It was not a party question for the moment. There were men on both sides who were equally anxious to promote the welfare of the agricultural classes. They might differ, as honest men might differ, as to the best methods, but the purpose was one that they should do all they could to make it better worth while for agriculturists to remain in the country districts, and to seek to stop that movement of the population from the rural districts into the towns. They wanted to see more people owning and occupying the land, thereby developing their own industry and extracting from their own soil the largest amount of food which it was capable of producing, thus giving increased employment and adding to the national wealth.

He ventured to say that they must have in the rural districts the education of their children on more practical lines. Instead of trying to cram them with book learning, they must try to qualify them to be successful in the avocation which they had to follow, and he thought it would be desirable that close by every country school there should be an acre of land provided, where the boys could be encouraged to have their little plot to grow vegetables and flowers, and, if they liked, to sell their produce, and have a little pocket money. As a result, they would awaken in the minds of these boys an ambition to excel in the cultivation of the soil.

They wanted, at the same time, to see more hope for the future in the breasts of those boys. He hoped remuneration for the agricultural labourer would continue to improve, for unless he saw a prospect of being well rewarded for his labour he would not stay in the country districts. He knew the farmer could not afford to pay the labourers more, or he would do so, but the remedy lay in this—that certain unjust burdens must be removed from the farmer, placing him in a position to be better able to pay his men. Not only in the interests of the agricultural labourer, but in the interests of their grand old industry, it was the duty of any political party, no matter which, to do what they could, having regard to the just rights of other sections of the community, to make it better worth while for the agricultural classes to stay in the country districts.

By Lupulin.

Our Imports and Exports.

The Board of Trade returns just issued give us the following information concerning our foreign transactions in hops. We have received in November from the U.S.A. 5,360 cwt., and from other countries 17,233 cwt., the total, 22,593 cwt., showing an increase over the receipts of the previous month to the extent of 8,428 cwt. I fear that this enlarged influx may be taken as an indication of what will follow as soon as our rivals are tired of waiting for the sufficient advance in our values to enable them to find profit in our market. The surplusage both of America and the Continent must seek for an outlet, and it is only in the free ports of England that this can be found; therefore it is not unlikely that we shall hear of further shipments, at tempting prices, when local demand has been satisfied and the necessity of turning the balance into cash begins to be felt.

Comparing the results of the first three months of this season with those of the same period last year, we have reason to be well satisfied. America has this year only sent us 6,845 cwt., whereas in the same months of 1904 she shipped to England 59,278 cwt. From the Continent we have received this year only 34,519 cwt., against 101,874 cwt. up to this time last year. The difference of imports in our favour during the first quarter of the season is no less than 119,788 cwt.

Our exports during the period named have increased considerably upon the same business of 1904, being 10,735 cwt. against 5,772 cwt. This larger figure is mainly provided by the purchases of English hops for our Colonies, the buyers being attracted by our known qualities which are always in favour with our kin across the seas, and by the low prices at which we have been willing to sell this season. By deducting the exports from the imports, we find that the balances against our market at the close of November were 155,380 cwt. in 1904, and only 30,629 cwt. in the present year. We may therefore congratulate ourselves and say, "So far, so good," but we must be on the look-out, lest the enemy take us by surprise, and spoil our trade. There is certainly no markin for any injury of this kind, and it desirable that English holders, being forewarned, should be thereby forearmed, against possible loss.

General Observations.

England.

The Borough is feeling the effect of the approach of our Christmas holidays, consequently business is falling off, and the continuation of demand, which seemed to be probable a fortnight ago, is not being realised. Nor has the anticipated further advance in prices come about; but, on the contrary, it appears that the increase of imports last month has operated to some extent in checking the improvement in values that previously seemed imminent. The position in this respect is that of statu quo, prices being just maintained, but this is all that can be said. A circular, issued by a Borough firm to brewers, quotes this week 40s. to 85s. for English hops, adding that fine and choice descriptions are difficult to find at any price. On this basis we may fairly assume that growers cannot obtain more than 30s. to 75s., and I find that these figures are generally confirmed by factors' reports of the passing business. Their present experience is inducing some holders to withdraw from the market, in the hope that the trade may take a better turn when the New Year opens, and I hear that some of our growers are buying hops on speculation, thinking that they can make more profit in trading than in growing. This is quite possible, judging from the course of the current season, but, desiring to be a faithful counsellor, as far as my ability permits, I venture to utter a word of warning, and to advise caution. We cannot forget that an immense quantity of hops has been sold this year, being credibl informed that consumers have laid in very large stocks, and also that there is a large surplusage, both in America and on the Continent, which is only waiting a favourable opportunity to be shipped to this country. With these facts before us we can hardly expect that much, if any, improvement in values will be effected for some little time to come. Early clearance is therefore suggested as the most desirable policy. One cannot always be correct in forecasting, and the knowledge of the past makes one very careful, especially in such a vacillating and precarious a region as the hop trade. I trust, however, that my views are wrong this time, and that the future will be brighter than I can at present lock for.

Germany.

The latest reports from Nuremberg are very unsatisfactory. There is certainly some improvement in the export demand, but the business is being done at such very low prices, and in the most inferior qualities, that the market gains but little support therefrom. Several lots have been shipped at 15s. to 20s., and impartial observers are inclined to think that the lowest point has not yet been reached. Of course, much better figures are quoted for the higher grades. For instance, the best spalts are worth 80s. to 85s., Wurtembergs, Hallertans, and Padens 65s. to 75s., with other sorts in proportion; but the general dulness of business is so pronounced that all quotations must be considered only nominal, the tendency being so definitely in favour of further reductions, and the prospect of improvement remote.

The arrivals of hops at the Nuremberg Railway Station, from September 1st to November 30th last were 188,492 cwt., and the quantity despatched during same period 131,312 cwt. These figures do not represent the whole of the trade, as large quantities arrive and are sent out by road, but they give some indication of the increase of stocks, and in some degree account for the depression of the market. Another proof of the dulness that prevails is found in the reports from the great brewing centre, Munich, where, in the week ending November 17, only 170 cwts. were sold out of stocks amounting to 3,550 cwts.

Belgium.

Latest intelligence shows that the Belgian hop markets are in sympathy with those in other districts. The local demand is quiet, and comparatively little is being done in export business. The chief trade is of a speculative character, being stimulated by the necessity to cover earlier contracts. A moderate competition between bulls and bears is consequently aroused, in which sellers are somewhat conservative, and have been able to secure 48 to 50 francs for Alosts. But apart from these transactions, values in the open markets are hardly maintained, 40 to 45 francs being about the present currency for Alosts, and 25 to 27 francs for Poperinghe hops. In the country districts only a little business is passing, buyers being very reserved.

France.

My news from the U.S.A. has been recently somewhat limited, owing, I suppose, to the general dearth of business and its monotonous character. From New York State I hear that in the Cobleskill district the local market is dull, but fairly firm. Dealers have orders which cannot be executed owing to the general inferiority of the stocks remaining in growers' hands. Choice qualities are practically cleared out, the small remainders being held for higher prices. From Waterville the reports have a similar tone. The scarcity of good sorts compels buyers to turn their attention to the lower grades. These do not command more than 10 to 12 cents, and it is only occasionally that one hears of 15 to 17 cents being realised for little lots, which are exceptionally choice. A similar condition prevails on the Pacific Coast, where the bulk of the unsold stocks in first hands appears to be of undesirable quality. Any lots of good or choice hops are held with some firmness, and values are maintained. But prices of the lower qualities are all more or less nominal, ranging from 8 cents upwards. It is not unlikely that the experience of this season will check the previous tendency towards increase of the acreage, as although the crops this year are so large, the financial results to planters have been far from satisfactory. In the New York market there is some movement in export business, buyers being willing to pay for choice States 18 to 20 cents. Common to fair qualities do not command more than 10 to 15 cents, and yearlings are quoted from 8 to 14 cents. The outlook is not encouraging for holders, and the general feeling seems to be that, as soon as the necessity for realisation is felt, a large quantity will be forced for sale at any prices, and that further depression will be experienced.

The death was announced on Thursday of Mr. John Highfield, Cogshall Hall, Northwich, the owner of the Cogshall estates, and well known throughout the North of England as a breeder and exhibitor of Shorthorns. The deceased had lived at Cogshall Hall twenty years, and was aged sixty-four.

EAST ANGLIAN NOTES.

Next Monday and Christmas will be upon us, so at this moment farmers can pause to look around them, for their produce, live stock and poultry, have by to-day been forwarded to their various market destinations, and no market business of any moment will occupy the attention of the agricultural world, the corn market, or the meat trade, till New Year's day. King Fog has been the ruler as regards the atmosphere in East Anglia during the past week, with intervals of frost and muggy weather; while the rain that has fallen indicated within twenty miles of London the compounds with which the fog was charged; for the rain, dispersing the fog for the time being, brought down upon the few flowers in bloom and evergreens a coating of filth that spoilt all their beauty. Nevertheless, as we have had fair open weather up to the present, farm operations have made such headway in the fields that now work is nearly everywhere concentrated towards the interior or immediate neighbourhood of the farm premises. But a glance at the fields in the Eastern Counties, and one can at once see that the year's life never slackens, and though winter's severities are still about—at least for plant life it is to be hoped so—Nature already sets her face towards Spring in many ways.

The early-sown wheat is looking fairly well, and the fields look much greener than they did some ten days ago, although in some districts it was put in under very dry conditions. This, no doubt, is the cause of the remarks that we have heard recently of the time the seed wheat has been in the ground this autumn before appearing above the surface. In these cases its growth has been abnormally slow, and one must not run away with the idea that it has been making good headway in its root growth, for, strange to say, the top and bottom growth of the wheat plant are generally about equal.

With the near approach of the great national festival, the sale of fat stock, from which supplies of choice Christmas fare are obtained have become very numerous, and so the daily and weekly Press in the Eastern Counties have been devoting columns about the doings in their respective localities where they circulate. Taking the whole of East Anglia, we should say that the prices for Christmas fare are satisfactory to agriculturists, although they naturally say that they would like values to be better, and frost now is what is wanted.

An interesting festive gathering took place at Hadleigh on Tuesday last, when Sir Cuthbert Quilter, M.P., entertained his tenants of allotments in the parishes of Layham and Hadleigh. It will be remembered that, with the laudable desire of benefiting the working classes, Sir Cuthbert Quilter some twelve years ago hired land for the purpose of allotments, which he sub-let to tenants in several parts of South Suffolk; and the popularity of the scheme and the goodwill that exists between the baronet and his tenants can not only be gauged by the manner in which he was received on Tuesday, but from the fact that as each tenant had the privilege of bringing his wife, daughter, or friend, close on 200 accepted Sir Cuthbert's hospitality.

Outside live stock and Christmas fare, farmers throughout East Anglia have had during the past ten days the question of producing sugar from English grown sugar beet at a profit. From Lincolnshire we learn that deputations from different bodies are now studying the German methods of extracting sugar from beet, and they are expected early in the new year to report on the prospects of establishing similar industries in England. While at the luncheon given in connection with the Ipswich Fat Cattle Show, Mr. E. G. Pretyman, M.P., in proposing the health of the President and success to the Show, after alluding to the unprofitableness of corn-growing, made beet sugar growing in England his sheet-anchor. Mr. Pretyman also remarked that he had grown sugar beet, and if he could get 18s. a ton for it he was perfectly prepared to grow it. Again, in Essex, the subject formed the topic of a lecture given by Mr. Sigmund Stein, of Liverpool, at the County Laboratories, Chelmsford, and in introducing the lecturer the Chairman, Mr. Thomas Goodchild, C.C., who is the Chairman of the Agricultural Committee of the Essex County Educational Committee, alluded to the experiments in the growth of sugar-beet recently undertaken in Essex, at Great Stambridge, Chelmsford, St. Osyth, Yeldham, and Maplestead. The average yield had been 18.2 tons per acre, 16.6 per centage of sugar, and 85.1 per cent. of juice purity. Thus the experiments carried out in Essex had more than held their own as compared with experiments in Germany.

Live and Dead Weight.

SIR,—Will you kindly answer the following queries in your Journal?—

Well-fattened bullocks and sheep, fit for butchers' use. Two Shorthorn bullocks weigh 80 stone each, live weight; 20 Blackfaced Suffolk sheep weigh 220 stone, live weight—all 14 lb. to stone.

What is a fair percentage to write off respectively between live and carcase weight? Also a fair percentage off fat hogs of 18 stone live weight? G. G. C.

The Impending Elections.

SIR,—I suppose that agriculturists will be anxious to know what is to be done for them in the new Parliament, and what will improve farming interest.

My prescription is, Peace and Popular Representation, instead of Despotic Imperialism.

Millions of people, if they had not been slain in war, would have been customers to consume the produce of the land. The so-called Union of the Empire by emigration for Ireland is absurd. Paddy has been driven away to America, there to cultivate an overplus of grain to swamp our markets.—Yours truly, OBSERVER.

December 13, 1905.

Wheat Crop in Hunts—Canadian Cattle.

SIR,—There is but little to report concerning agriculture at this dead season of the year. On the whole the autumn has been a favourable one, notwithstanding the somewhat severe frosts with which we were visited in the month of October. The wheat went into a fairly good but rather dry seed-bed; the effects of this are apparent in some fields where the plant appears to be thin; then the slugs have been extremely busy where the previous crop was clover, etc. The larks have also been more troublesome than usual, but, on the whole, the growing wheat may be reported as promising.

Some farmers were fearful that the frosts had injured their mangolds which were not stored; there does not appear to have been good and sufficient reasons for this fear, providing that the roots were not touched during the time that they were in the least frosted. Most of the mangolds were carted off the land with the least injury experienced for many years—in fact, we may safely report the mangold crop as one of the best of recent years, and extremely well stored with a minimum of horse labour. The growers of kohl rabi were not quite so fortunate, as a week of wet weather followed the break-up of the fine time in October. A slight delay in operations proved to be the proper course. Store cattle have not for many years been so low in price.

Surely the bottom is knocked out of the paid agitation of the representatives of the harbour trusts and of that small minority of feeders who care naught for the best interests of the thousands of small farmers who have been enabled to weather the storm solely by the aid of the rearing of young stock. The folly of the few beef manufacturers in imagining that for any length of time they will be able to force down the actual value of store cattle is beyond me; so long as the breeding and rearing of stores continues to be for a lengthened period profitable, so long will the other farmers produce them. The moment the conviction is forced on to them that there is little prospect of the rearing of stores being profitable, they will cease to rear and grow them, when the graziers will be entirely in the hands of our colonial friends, who will doubtless know how to take advantae of their opportunity.

Again, suppose there should be a case of foot-and-mouth disease among a shipload of stores, having amongst them a few suffering from that terrible skin disease, which is so prevalent in parts of the United States, if not in Canada, and the importation of stores is suddenly stopped, then the last state of the graziers will be worse than the present.

December 15, 1905. SANDERS SPENCER.

Prices and Prospects in Dorsetshire.

SIR,—This season has been a most favourable one for autumn cultivation, wheat-sowing, etc. In severe cases a certain amount of damage was done to the mangold crop by the early frosts. The root crop on the whole is not a good one, but, the winter having been mild, I do not think there is likely to be any real scarcity of keep this winter. The sheep trade has been good all along. The late fairs were some of the dearest for store sheep. Good milking cows and heifers have sold well, but store sheep have not sold well, except yearlings. There has not been any glut in the milk trade so far, but should the weather continue mild there will probably be a surplus of milk in January.

The wheat trade has been dull, and the price low considering the extraordinary quality of wheat. As regards quantity, the yield of wheat has been disappointing, and not in proportion to the bulk of stem. The oat crop, except winter oats, was a very bad one. The price of oats is fairly satisfactory. Barley a fairly good crop, and about average prices. Horses have been cheaper than they have been for some years past.

All farms in this neighbourhood, and one does not hear much grumbling among farmers. Where good cottages are provided there is plenty of labour to be had. G. E. R.

December 14, 1905.

Farm Work in Hampshire.

SIR,—The wheat plant is coming along well, also other winter crops, such as rye, oats, barley, and vetches. Owing to the small amount of hindrance by frost, all farm work is in a very forward state.

Hampshire Down flock-masters, in the earlier districts, are turning their attention to the lambing fold preparations.

Many flocks commence to lamb at the beginning of the New Year. Sheep feed in some parts is very good, while in others many complaints are heard of a short supply. Fat cattle prices have been very bad indeed, but prices for good-quality sheep have been well maintained. Fat pigs are scarce and making good prices—much better than for many years past.

Store cattle are difficult to sell, hardly realising what they cost to buy in the spring. M.

December 15, 1905.

Stock and Crops in East Yorkshire

SIR,—The season up to the present has been very favourable, and work of all kinds is very forward: labour is plentiful, and I am afraid a great many will be out of work during the winter; there are not so may days' threshing to do, so casual labour will not be in request. The growing wheat is looking well, and is about all up, but throught the frosty nights we had in November, it laid in the ground a long time.

The young clovers grew wonderfully after the corn was cleared from them and promise well. The white turnips are making a fair lot of eating, and swedes are growing yet, but are a broken crop. The yield of wheat has been good, prices 29s. to 30s. per qr. Barley yields fairly, but the price is not good, and the demand for it gets worse nearly every week. Oats a very poor crop and bad yield. We must hope for better prices in the New Year.

The beef trade has been bad all the autumn, about 7s. per 14 lb., and now at Christmas very few reach 7s. 6d. Mutton has been selling better, and I think is scarce throughout the country. The springs have risen a little, and are running now where they have not run for eighteen months. J.

December 15, 1905.

Hampshire Prospects.

SIR,—There is little to report at this time of year. Wheat sowing is nearly completed, and has been pushed on with little delay since the fine rain commencing October 30. I do not remember wheat lying so long in the ground, and that sown during the first week in November is only just breaking through. Rye, winter oats, and tares have done well. Turnips and swedes were not generally good in this part. The backward sowings never did well, and should we get severe weather pigeons and larks will clear fields of this description.

Sheep generally have done well and made good prices all through, but cattle have paid little or nothing for summer and autumn grazing. Labour very plentiful. E.

December 15, 1905.

"The Agricultural Annual and Mark Lane Express Almanac for 1906" is now ready. It contains specially written articles on all subjects of interest to a farmer. Send at once for a copy. Price 1s.; post free, 1s. 4d. "Mark Lane Express" Office, 3, Wellington Street, Strand, London, W.C.—[ADVT.]

Christmas Markets in Somerset—Potato Growing.

SIR, This week and next are very busy ones getting the remainder of the farm stock and produce despatched for the Christmas markets, and, judging by what has been sold lately, we are not likely to meet a very good market, for the old system of keeping up the best of everything for those times has been taken up by the importers, so that as likely as not there will be a glut, with a lowering of prices. This is already felt in the case of beef, for steers, which were not thought to be finished in August last were worth as much then as they fetched last week, so that their three months' keep on the best feed had been practically thrown away. A butcher who heard this said: When will the feeders listen to the warnings of the trade that it is no use piling on fat which the public will not have, and which has to be sold at surplus fat price of , say, 3d. per lb.?

Potato growers are finding present prices for good quality on the table are on a paying basis, provided a maximum is obtained, and one of the ways in that direction is to have the seed hand-picked at once, and see that only models in shape are put aside for own planting, for undoubtedly the rule of like producing like holds good in this case as in other plants and animals. The prohibitive prices of the new varieities are a thing of the past, and there is reason to believe they will be largely grown another season; for although in some cases the artificial propagation used to get up a stock in a hurry did harm, still there is now plenty that were not so subjected to this mode of culture and can be relied on to produce a big crop of good quality on suitable soil, and as they must have potash I find the cheapest form to obtain it is in kainit, applied broadcast before ridging up, about 5 cwt per acre, at a cost of, say, 15s. an acre. R.B.

December 15, 1905.

Stock Feeding in South Notts.—Local Burdens.

SIR,—We have at last got over the Christmas Fat Stock Shows, but we cannot feel that it pays well to feed cattle exclusively for the Christmas show, ordinary markets are about as good, and sometimes better. Sheep and pork are the only animals to pay well just now. What is going to become of the grazing fraternity if things do not mend one cannot tell. We cannot all go in for sheep and pork, or that will be in the same way.

Store cattle are doing well in the yards, but what we shall do with them if trade gets no better is hard to tell. We can only hope that after the General Election trade may took up and prices correspondingly.

Corn is not thrashing out above the average. I hear of very few samples of wheat being more than 4½ qr. per acre, and much barley not 4 qr. Oats generally a failure. New sowed wheat is looking well, and a considerable acreage is again put in, as also a larger area of winter beans, which are also looking well.

There appears a good amount of sheep-keep in this district, and of late sheep are doing well.

Dairy cattle are very dear, as is usual at this period when many cows are going dry consequent on calving in the early spring; even old cows, or cows which have had three or four calves in good buckle, are making £20 and more.

The open weather we are enjoying is helping us to get on with outdoor work, and ploughing is proceeding without any break. Early as was the work twelve months since, I think it is earlier now, with a larger acreage sown, leaving a smaller margin for spring corn, which of late years has not paid so well as autumn sown.

The suggestion of your correspondent in the Isle of Wight lends itself very generally to farmers and all agriculturists, and we ought to see that the candidates for Parliament will do something to reduce the heavy taxation. We have always had to bear more than our share, and it is high time we bestirred ourselves from our lethargic condition. The candidates themselves are but units, but if we club together and get at the units I feel sure something will be done. Then there is the question of education. We are educating our lads until we cannot get them to work for us. There are plenty of men, yet we cannot get a lad. Where are they all? Dressed up and going into town, where they can earn almost as much as their fathers can working on the farm, and having Saturday afternoon and Sundays to themselves. Can anyone blame them? That is what education has done for the farmer, and we have had to pay for it, and I presume shall have to still. There is no doubt, whilst our county councils and authorities are composed of rich men, not altogether practical, our rates will keep increasing. I sincerely hope the new Government will do something for agriculture. Let us see to it then that we urge the necessity of reduced rates on candidates everywhere.

J. A.

CORN MARKETS.

LONDON.

Mark Lane, Wednesday.—The attendance at Mark Lane was small, and trading ruled quiet in all departments. Foreign wheats were steady at last quotations. No. 1 Northern Manitoba ex ship quoted at 34s 3d and No. 2 at 33s 9d to 34s. For Australian 35s is wanted. Maize steadily held but quiet. Mixed American ex ship offers at 23s 3d. For La Plata landed 24s 9d is asked, and 23s 9d for ex ship. Flour firm and occasionally 3d dearer. Barley firm. Odessa-Nicolaieff landed is obtainable at 20s 6d. Persian at 19s, and American at 19s 6d to 19s 9d. Oats steady. 38lb. Russian offer at 17s 3d to 17s 6d., white American at 17s 6d to 17s 9d., and mixed at 17s 6d.

Mark Lane, Friday.—Trading was of a desultory character, but the tone generally was steady. English wheats quiet at last rates, while foreign sorts ruled firm at 34s 3d for No. 1 Northern Manitoba ex quay. Maize quiet, with mixed American landed held for 24s 3d; ex ship to arrive in a week offered at 22s 6d, and La Plata ex quay 24s 9d and ex ship at 23s 9d. Flour firm; for Iron Duke 22s 9d has been paid. Barley continues steady but quiet; Odessa Nicolaieff quoted at 20s 6d. Oats quiet at unchanged prices to the turn easier; South Russian offered at 17s 3d to 17s 6d, North Russian at 16s 9d to 17s 3d, and American at 17s 6d to 17s 9d.

COUNTRY.

Ashford, Tuesday.—The approach of the holidays, and the occurrence of the Ashford Cattle Show, combined to reduce the business at this market to narrow limits. Prices were unchanged, though in some cases nominally. Wheat, 28s to 30s; malting barley, 28s to 31s; oats, 18s to 22s; tick beans, 31s to 32s; Mazagans, 28s to 29s; maize, 27s to 28s; peas, 29s to 30s; foreign barley, 23s to 24s.

Banbury, Thursday.—Wheat, red, new, 27s to 28s 6d; ditto white, new, 27s to 28s; barley, 24s to 30s; beans, new, 30s to 31s; oats, 17s to 22s; peas, 29s to 32s per qr.

Berwick, Saturday.—Good attendance; smaller supplies of wheat and oats; barley firm at late rates. Wheat, 28s to 29s 6d; barley, 24s to 29s; oats, 18 s to 21s per quarter.

Birmingham, Thursday.—A small attendance at the market, and only a quiet retail trade. Both foreign and English wheats were about unchanged in value on the week. Plate maize has advanced to 24s 3d per qr. (480lb.) at Sharpness, flat maize being 3d down at 24s 6d Bristol. Grinding barley has improved 3d on the week, sellers requiring 20s 9d per qr. (400lb.) at Sharpness. English oats firm at 19s to 20s per qr. (312lb.), and beans 12s 3d to 12s 6d per bag (196lb.) delivered Birmingham.

Brighton, Thursday.—Barley, 28s to 33s; grinding ditto, 22s to 23s; oats, English, 18s to 21s; peas, 30s to 31s; beans, 32s to 33s. Quiet trade at last week's prices. Wheat in fairly good supply; prices unaltered and slow demand. Small attendance.

Bury St. Edmunds, Wednesday.—Wheat: Not a great deal on offer; price unchanged on the week, at 29s to 30s per qr. Barley: In moderate supply, with a fair demand for malting qualities, at 28s to 32s per qr.; grinding descriptions firm, at 24s 6d to 25s 6d per qr. Oats firm at fully late rates of 20s to 21s 6d per qr. Maize unchanged at 25s 6d to 26s per qr. delivered for either rounr or flat. Other feeeding corns, also oilcakes and milling offals, firm, at last week's full prices.

Cambridge, Saturday.—The wheat trade last week remained quiet and unchanged in price, with small supplies Fine dry lots readily taken, but many samples lack condition and are neglected. There was no ta large supply on offer, and wheat was a dull trade for all but the best lots, without much change in values. Red, 29s to 31s, and white up to 31s per 504lbs. Spring corn quiet, but steady in value.

Canterbury, Saturday.—Barley supplies are diminishing, and for best malting samples a trifle more money is obtainable, values ranging up to 33s; grinding qualities, 23s to 26s per quarter. Tick beans are also worth a little more money, ranging up to 34s 6d; mazagans, 30s to 32s. Wheat firm, up to 32s. Oats steady, from 17s to 23s.

Chester, Saturday.—The offerings of English grain were small. Wheat was slow, oats firm, and barley quiet. Old Indian corn (flat) was easier. Better inquiry for offals. Quotations: Wheat, and red, 4s 3d to 4s 6d per 75lb.; barley, grinding, 3s to 3s 2d per 64lb.; beans, old, 5s 9d to 6s per 80lb.; oats, new, 2s 3d to 2s 7d; ditto old, 3s 3d to 3s 6d per 46lb.; Indian corn, new, 12s 6d to 12s 9d; ditto old, 12s 9d to 13s 6d per 240lb.; River Plate, new, 12s 9d to 13s per 240lb.

Chichester, Wednesday.—New white wheat, 30s to 31s; new red ditto, 30s to 30s 6d; barley, 28s to 32s; grinding ditto, 20s to 21s 3d; oats, English, 17s 6d to 22s; peas, 30s to 31s; beans, 32s to 33s; maize, 25s 6d to 26s; flour, 25s to 27s. Small attendance. Not much on offer, and firm trade.

Colchester, Saturday.—Wheat a small supply; prices unchanged. Barley dull. Beans and oats steady.—JOSEPH WILES AND SON, LTD.

Coventry, Friday.—There was but a medium attendance, and no alteration of moment in prices, which ruled as follows: Red wheat, 11s to 11s 6d per 1861b.; new wheat, 10s 3d to 10s 9d per 1861b.; barley, 27s to 32s per 448lb.; old oats, 23s to 25s per 352lb.; new oats, 19s to 22s per 352lb.; old beans, 12s 6d to 13s per 196lb.; new beans, 11s 9d to 12s 6d per 196lb.; peas, 11s 6d to 14s per 196lb.

Derby, Friday. Wheat in small supply, but firm in value. Spring corn realised the extreme rates of last week. Quotations: New white wheat, 30s to 31s; red, 29s to 30s; malting barley, 26s to 28s; old beans, 34s to 35s; new, 33s to 34s; old oats, 23s to 24s; new, 19s to 20s.

Devizes, Thursday.—There was a small supply of corn. Prices were firm, with no quotable alteration from last week. The following were the quotations: New wheat, 14s 6d to 16s; secondary, 13s to 14s; best barley, 26s to 32s; secondary, 20s to 24s; rye, 22s to 24s; old black oats, 20s to 23s; new ditto, 16s 6d to 19s; malting barley, 26s to 32s; beans 16s to 18s; fine flour, 24s to 26s; extra fine, 27s to 30s.

Doncaster, Saturday. Moderate supply of English wheat and prices firm; top value 11s 6d per load. Foreign wheat continued firm, and Indians were 3d per quarter more money. Only the finest sorts of barley were asked for, prices unchanged. Maize was 3d per quarter lower. Other feeding offals unchanged.

Dorchester, Saturday. Somewhat improved attendance at to-day's market, and corn came a little better to hand, but there was not much business passing, the approaching holidays seemingly already beginning to tell on trade. Wheat, both English and foreign, remained unchanged from last week. Flour firmer, as was barley, both malting and feeding. Oats scarcely as buoyant as they were, and maize a very slow trade. Beans and peas as before.

Dublin, Friday. Wheat, 17s 6d to 18s 6d; malting barley, 14s 6d to 15s 3d; grinding ditto, 12s 9d to 14s; oats, 10s 9d to 13s 3d; oatmeal, extra pinhead, 12s 6d to 14s 6d; flour, 10s to 12s 6d; pollard and bran, 6s to 6s 6d.

Exeter, Friday. Not much trade. English wheat firm, if anything rather dearer; foreign unchanged. Maize firm. Barley shade dearer. Flour steady. English wheat, 3s 9d to 4s; English barley, 3s 6d to 4s; superfine flour, 25s to 28s; fine, 23s to 25s.

Glasgow, Wednesday.—There was the usual attendance at our Corn Exchange to-day. Wheat the turn in sellers' favour, and flour firm at last Wednesday's prices. Maize and corn both 3d per boll cheaper on the week owing to fresh arrivals. Barley firmer, but little business passing. Scotch and foreign oats met a slow sale at late rates. Beans firm, but nominally unchangedd. Peas firm, but unaltered. Oatmeal quiet and unchanged. Bran and thirds firmly held, but without change. GIBSON AND CLARK.

Glasgow, Friday.—Manitoban spring wheat held for 3d advance, which checks sales. Flour very quiet. Mixed American maize quiet at 14s 6d per 280lb.; round 1½d lower, at 14s 3d. Grinding beans, 3d dearer. Other feeding stuffs nominally unaltered. Medium bran in good demand at 92s 6d per ton.

Gloucester, Saturday.—English wheat was in fair supply and unchanged in value. Foreign was a very quiet trade at unchanged rates. Maize unaltered. Barley 3d to 6d dearer. Oats firm. WAIT, JAMES AND CO.

Grantham, Saturday. — An average attendance of farmers and dealers, and a fair amount of trade. There was a fair supply of wheat, and the demand was quite up to the average, last week's prices being maintained. Barley, 24s to 32s per quarter. A quiet business prevailed in other departments, and there was no variation in the values on the week.

Hereford, Wednesday.—There was a moderate attendance. English wheat steady at last week's figures. Barleys met with a rather better demand for good malting qualities, but trade for low classes was distinctly easier. Oats steady, without quotable change in price. Beans less active. Wholesale quotations: Wheat, 3s 4d to 3s 7d per 52lb; barley, 3s to 3s 9d per 56lb; oats, old, 2s 6d to 3s per 40lb; new, 2s 2d to 2s 6d per 40lb; beans, old, 4s to 4s 6d per 65 1-3lb; new, 3s 8d to 3s 10d; vetches, 5s 6d to 6s 6d per 65 1-3lb.

Ipswich, Tuesday.—Small supply of wheat, trade steady, prices unaltered. Reds, 29s to 31s. Small supply of barley, trade slow at fully late rates. Fine, 32s to 34s; runs, 26s to 30s. Oats quiet. Maize rather easier. Beans and peas unaltered.

Leeds, Tuesday.—Shipments this week, although liberal, prove more moderate, and the trade keeps wonderfully healthy and firm; the demand for wheat, however, continues restricted, and business, besides, is sadly hampered by the interruption of telegraphic communication with Russia. Prices on the week, for both English and foreign wheat, are the turn against buyers. Malting barley favours buyers. Feeding stuffs firmer at a slight advance.—DUNNS AND CO.

Leeds, Friday.—English wheat was firm at Tuesday's top prices; foreign was the turn dearer for choice lots. There was no change in feeding and malting barley. Oats and peas were slightly dearer. Beans, maize, and flour firmly held.

Leicester, Saturday.—Good attendance of buyers and dealers, with full supplies of home-grown wheats. Trade steady. Red wheats, 29s to 31s; white wheats, 30s to 32s per 36 stones; good samples of barley, 25s to 29s per 32 stones. Beans steady. Fine oats, 20s to 23s per 26 stones.

Lincoln, Friday.—Good attendance, and fair show of English wheat, which met with a ready sale at the full prices of last week. Oats, beans, and barley in good supply, and selling readily at unchanged rates.

Liverpool, Friday.—There has been a small attendance, but wheat meets a very fair inquiry and holders are firm at an occasional ½d advance; Manitobas, however, have sold at a shade under last Tuesday. Flour: A very slow trade at about last Tuesday's prices for both foreign and home-made brands. Maize: Mixed, old is steady, but ¼d below last Tuesday, with a moderate trade; new Galveston, owing to its dry condition, has sold readily at quotations; Plate firm, owing to smaller supplies, but quiet; European grades steady, unaltered. Barley: Malting firm at about 6d to 1s advance and very scarce; feeding the turn dearer, but quiet. Beans steady at about unchanged prices, with a small trade passing. Peas steadily held at last market day's prices, but in slow request. Oats in slow demand, and generally the tone is quiet, but no lower prices are quoted. Oatmeal being very scarce is firmly held, but the demand is very small. Oilcake: A quiet trade for American cakes, but English cakes in fair demand at late rates; meal scarce and 2s 6d per ton dearer. — SEGAR AND TUNNICLIFFE.

Manchester, Thursday.—English wheat in small supply, and demand poor. Foreign quiet and unchanged. Flour rather easier. Indian corn lower. Plate quoted at 4s 11½d to 5s; mixed American, 5s 10½d to 5s 11d. English oats unchanged, and in buyers' favour. Beans and peas firm. Barley unchanged, and feeding stuffs steady.

Newark, Wednesday.—Wheat: A firm trade at full prices. Barley: A firm trade at previous prices. Oats firm. Beans rather dearer. Quotations:—Wheat, 28s to 30s; barley, 24s to 30s; oats, 18s to 20s; beans, 30s to 32s per quarter.

Northampton, Saturday. — Market had a holiday aspect. Supplies fairly large, but trade quiet. Oats and beans particularly firm. New wheat, 27s 6d to 29s; malting barley, 25s to 32s; new white oats, 19s to 20s 6d; new black oats, 18s to 19s; new beans, 29s to 32s; peas, 27s to 28s; flour, 24s 6d to 28s 6d.

Norwich, Saturday.—There was more wheat offering at our exchange to-day, with a firm trade at last week's currencies. Barley was also in better supply, and fully as dear. Gloomy weather still prevails. Wheat, red, 30s to 31s per quarter, weight 63lb per bushel imperial. Corn inspector's return for the week ending December 2, 1905: Wheat, 3,247, 28s 7d; barley, 20,889, 24s 4d.—J. A. MILLS.

Nottingham, Saturday.—There was only a moderate supply of wheat, and prices were well supported. Meagre supply of barley, and slow trade at about late rates. Oats and beans poor show, and prices in sellers' favour. ROBT. HUBBLE.

Oxford, Saturday.—The attendance was fair, but business was on a somewhat small scale. English wheats were in moderate supply, and moved slowly at about former values. Feeding stuffs were in limited request.

Peterborough, Saturday.—The wheat trade to-day has been dull and slow, but there was no quotable change in prices. Barley was in small supply, and made fully as much money. Oats firm and quite as dear. THOMAS HILL AND SON.

Preston, Saturday. Despite an indifferent demand for wheat values were maintained. Poor attendance, and not much business passed. Wheat, white, new, per windle of 220lb., 13s to 13s 6d; ditto red, 12s 9d to 13s; oats, 2s 9d to 2s 10d per bushel; beans, per windle of 220lb., 16s to 16s 6d; bran, 10s 6d to 11s.

Reading, Saturday. The Exchange was fairly well attended, and business was firm. Wheat sold well at 28s to 32s, and barley realised 24s to 31s 6d. Oats fetched from 16s 6d to 21s 6d, and beans and peas made last week's prices.

Retford, Saturday. — A fair muster of factors and farmers, and a moderate supply, but trade all round was extremely dull. Prices of wheat were on the decline at 28s to 29s 6d, and rarely realising 03s. Good useful lots of malting barley changed hands at 26s to 28s; and grinding at 24s 6d per quarter. Business in grain for feeding purposes was confined to small lots for immediate consumption, and maize again realised 25s; beans, 30s to 31s; and oats, 18s to 20s per quarter.

Ripon, Thursday. — Scarcely any business passing. Last week's prices are maintained. A good show of malting barley. Prices: New wheat, 28s to 29s 6d; wheat, foreign, 33s to 33s 6d; barley, grinding, 23s to 24s; barley, malting, 25s to 28s; new oats, 18s to 20s; maize, round, 25s 6d to 26s; maize, flat, 25s 6d to 26s 6d per qr.

Shrewsbury, Saturday.—Wheat, 12s 6d to 12s 9d per 225lb.; white oats, old, 16s to 16s; new, 11s 6d to 12s 9d; peas, 11s 6d to 12s 6d per 240lb.; beans, 13s 6d to 14s per 240lb.; barley, 14s to 18s per 280lb.

Stamford, Friday.—Good attendance and a fair trade. Wheat, 28s 6d to 29s; best malting barley, 32s; grinding, sorts, 25s to 25s; oats, 18s 6d to 19s per quarter. Beans and peas very firm.

Sunderland, Saturday.—Better supply of grain. Wheat slow, and rather easier. Spring corn unchanged. Arrivals, coastwise: Wheat, 1,600 quarters; oats, 745 quarters. Arrivals, foreign: Barley, 4,449 quarters.—E. AND F. RICHARDSON.

Tunbridge Wells, Friday.—New white wheat, 32s 6d to 33s; new red ditto, 31s 6d to 32s; barley, 28s to 34s; grinding ditto, 21s to 24s; oats, English, 18s to 21s; rye, 25s to 26s; peas, 32s to 37s; beans, 32s to 35s; tares, 42s to 50s; maize, 26s to 30s.

Warwick, Saturday.—Very small supply of wheat; best samples sell at a trifle advance; out of condition slow sale. Poor show of malting barley on offer. Oats and beans about unchanged. Feeding stuffs rather lower.

Winchester, Saturday.—English wheat scarce, and a dull trade at last week's prices. Foreign unaltered. Barley and oats 3d advance. Maize unchanged. Flour quiet at late rates.—FEAR, COLEBROOK AND CO., LTD.

Wisbech, Saturday.—A small market. Wheat varies in condition. Dry reds, 30s 6d. Oats full prices, 19s to 20s 6d. Barley, 25s to 28s.—JAMES FLETCHER.

Worksop, Wednesday.—Good attendance, and a fair show of grain. White wheat, 28s to 30s; secondary qualities, 26s 6d to 28s; best malting barley, 28s to 30s; secondary, 26s 6d to 28s; grinding barley, 22s to 24s; white oats, 17s 6d to 19s; black oats, 16s to 17s; maize, 25s 6d to 27s 6d per quarter.

Yeovil, Friday.—English wheat firmly held. Foreign quiet. Oats sold at 3d advance. Grinding barley made 3d more. English wheat of best quality, 30s to 31s; secondary, 28s to 29s 6d; foreign, 33s 6d to 36s 6d; malting barley, 31s 6d to 35s; feeding barley, 21s 9d to 23s; foreign barley, 20s 9d to 21s; maize, 24s 3d to 25s 6d; beans, 32s 6d to 37s; rye, 22s to 23s 6d; oats, Irish black, 17s 3d to 18s; English ditto, 17s 6d to 20s 6d; ditto white, 17s 3d to 20s; rape, 46s to 48s 6d; veitches, 6s to 7s per bushel. Flour trade affected by the mild weather. Fine sells at 24s to 26s; extra fine, 27s to 30s. Good trade passing in offals and meals at the full rates of last week.

York, Saturday.—Very little wheat on offer, and good samples sold at last week's prices. Fine white made 29s 6d to 30s 6d; and red and mixed, 29s to 30s per quarter of 36 stones. Malting barley was in excess of the demand; fine fetched 26s 6d to 28s; good, 25s to 26s 6d; and feeding, 23s to 24s per quarter of 32 stones. Oats scarce and firm. White Tartary made 17s to 18s; black, 18s to 19s; and white Garton, 19s to 20s per quarter of 24 stones. Rye, 23s to 24s; and old beans, 33s to 34s per quarter of 36 stones.

FOREIGN

Paris, Wednesday.—In the provincial markets prices remain firm; offers are large, but there is not much business being done. Due to the approaching end of the year, both buyers and sellers do not care to do much business, preferring to wait till markets are in a more settled condition before taking up any definite position. Flour is selling slowly, but prices remain unchanged, although stocks are not large. The Bourse de Commerce is still characterised by that calmness which has been a feature of the past days. Wheat continues to arrive only from the district in the immediate vicinity of Paris, as the prices asked in the provinces are too high to enable them to compete. Prices remain firm, with a slight advance for current parcels. There is a somewhat better demand for flour, due not to any fear of a rise in prices, but to a desire to profit by the reduction which millers have thought it well to make. Speculators refused any concessions, but the market closed with a drop of from 5c to 10c.—*Dornbusch.*

Hamburg, Saturday.—Weather mild and damp; market kept quiet; buyers in the interior appear to have secured all they can provide for, and to effect sales lower prices must be taken. Only oats remain firm, owing to a want of offers from Russia. The imports since December 1 barley, 40,715 tons wheat, 10,838 tons rye, 33,430 tons barley, 40,715 tons maize, 10,080 tons bran. Fine Red Holstein and Mecklenburg wheat is offering at 32s 6d to 33s per 504lb. f.o.b.; American Hard Winter No. 2, 31s 6d; 80 kg. River Plate, 32s 6d; 77-78 kg., 31s per 480lbs. c.i.f. Offers of foreign rye are scarce; 9 15-20 South Russian afloat is held at 27s 3d per 480lbs. c.i.f. Good Danish barley continues in demand at 29s to 31s; Oderbruch and East Prussian is selling at 28s 6d to 30s; Bohemian to arrive per barge is held at 35s 6d to 38s per 448lbs. f.o.b. The demand in the southern markets has abated. Feeding barley in better supply; 60-61 kg. South Russian about due is offering at 19s 3d per 400lbs. c.i.f. Hamburg; spring shipments not offering. White clipped American oats are selling at 17s 3d per 320lbs. c.i.f. Hamburg. Mixed maize afloat is offering at 21s 9d, January 20s 9d to 21s 7d, River Plate due 23s 6d, May-June 21s, per 480lbs. c.i.f. Hamburg.—JOHN TATLOCK.

THE BALTIC.

London Corn Trade Association prices for arrived cargoes are 33s. 9d. per 492 lb. for White Calcutta wheat, 34s. 9d. for Red Calcutta wheat, and 33s. 3d. for Soft White Kurrachee wheat. No Delhi, Bombay, or Central Indian

wheat is quoted.

Arrivals at ports-of-call have been as follows:—

Maize, four cargoes from Argentina.
Linseed, one cargo from Argentina.

No wheat, barley, or oat cargoes have arrived on sale, the cargoes being in all cases already sold and arriving for actual use. Of cargoes off coast, two wheat have been bought for Ireland, two maize for Antwerp, and one linseed for France.

Since January 1 the total arrivals thus compare:—

	1905	1904.
Wheat	304	290
Barley	25	53
Oats	2	—
Maize	20	15
Linseed	55	44

Cargo sales between 11th and 16th inst. included:—Wheat.—White Walla, 32s. 6d. per 500 lb.; Red Walla, 31s. 6d. per 500 lb.; Blue Stem, 32s. 9d. per 500 lb.; Roumanian, 31s. 9d.; per 492 lb.; finest Russian winter, 34s .6d. per 492 lb.; Odessa Ghuka, 32s. 9d. per 492 lb.; and No. 1 Northern Manitoba, 32s. 9d. per 480 lb. Maize.—Argentine, 23s. 6d. per 480 lb.; and American 20s. 9d., the first on passage, the second for January shipment. Barley.—Kustendje, 21s. per 400 lb., and Black Sea 20s. per 400 lb. Oats.—17s. per 320 lb. American, and 22s. per 384 lb. New Zealand.

WOOL.

Canterbury, Saturday.—Staplers, anticipating higher prices in the near future, there is a good demand. Holders, however, decline to sell except at an advance.

Halifax, Saturday.—The wool market is a little easier, with some tendency to further depression, though merchants are sanguine that it may be only temporary. As regards home-grown wools, the weakness is chiefly in wethers. Woollens are in steady request.

London, Saturday.—English—per pkge. of 240lb—Fleeces, South Down hoggs, £14 to £14 10s; half-bred hoggs, £12 10s to £13; ditto wethers, £12 5s to £12 15s; Kent fleeces, £12 to £12 10s; South Down ewes and wethers, £13 to £14 10s; Leicester ditto, £11 15s to £12 5s; Colonial—per lb—Vic., fleece super., 1s 11d to 2s 1d; scoured good, 2s 1d to 2s 2d; scoured average, 1s 11d to 2s; greasy average to fair, 1s 1½d to 1s 2½d; N.S.W., scoured average, 1s 8½d to 1s 9d; greasy average, 11½d to 1s; S. Aus., greasy average, 9d to 9½d; N.Z., scoured average, 1s 9½d to 1s 10d; greasy average, 10½d to 11½d; Cape, scoured super., 1s 10d to 1s 11d; fleece average, 10d to 10½d; greasy average, 7½d to 8½d; Natal, scoured, 1s 5d to 1s 6d; greasy average, 8½d to 9½d; crossbreds—grs.—Vic., good to super., 1s 2d to 1s 3d; New Zealand fine, 1s 2d to 1s 3d; ditto medium, 1s 0½d to 1s 1½d; ditto coarse, 10½d to 11½d.

MANURES.

Liverpool, Friday.—Nitrate of soda firm at late rates. Kainit and basic slag are in seasonable request at former reasonable prices. Feeding stuffs are firm all round, but lack activity as regards the consumptive demand, and appended are the values:—Fattening cake, prime Liverpool make, in bags, £6 17 6d to £7; feeding or dairy cake, prime Liverpool make, in bags, £6 10s to £6 12s 6d; nitrate of soda, best quality, i.e., guaranteed 95 per cent. pure, in bags, £10 15s to £11; bone meal, River Plate, prime, in bags, £5 5s to £5 7s 6d; kainit, prime 23 per cent. sulphate of potash, in bags, £2 to £2 2s 6d; palm nut cake, prime, in bags, £5 15s; linseed cake, American thin oilbag, prime but hard, in bags, £8 5s to £8 7s 6d; ditto English, prime, in bulk, £8 10s to £8 17s 6d; linseed meal (pure crushed linseed), prime, in bags, £14 to £15; cottonseed cake, N.A. decorticated, good ordinary, in bags, £7 5s to £7 7s 6d; ditto English decorticated, good ordinary, in bags, £7 15s to £7 17s 6d; ditto English undecorticated, prime, in bulk, £4 13s 9d to £5; cottonseed (crushed), 20 to 25 per cent. oil guaranteed, prime, in bags, £7 to £7 2s 6d; maize germ meal, prime, in bags, £6; corn oil cake, prime, in bags, £6 2s 6d; rice meal, Rangoon, as imported, in bags, £5 5s to £5 7s 6d per ton; linseed, fine bold feeding, in bags, £2 8s per qr. 416lb.; cod liver oil, cattle feeding, prime, in casks, 4s 6d per gallon; treacle, feeding prime, in barrels, 4s 6d per cwt.; D N S brand superphosphate of lime, guaranteed 25 to 27 sol., in bags, £2 to £2 2s; ditto ditto guaranteed 30 to 31 sol., in bags, £2 5s to £2 7s; ditto ditto guaranteed 35 to 36 sol., in bags, £2 15s to £2 17s; basic slag, prime quality, guaranteed 30 to 35 per cent. phos., in bags, £1 11s to £1 13s; ditto prime quality, guaranteed 38 to 45 per cent. phos., in bags, £1 18s to £2; ditto finest quality, guaranteed 42 to 50 per cent. phos., in bags, £2 1s to £2 3s per ton.—at depots inland.—H. JONES LANGAR AND CO.

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

The aspect of the October-sown wheat is healthy, but the season is not quite of the character farmers desire, and a drier air is much to be wished for. The threshing of grain in this weather is a mistake, and the condition of the samples shown at Mark Lane has not been at all what one could approve. Millers will only pay a good price where the wheat admits of prompt use in the mill, while the reduction expected by buyers of any barley which is out of condition is a very large one. Colder weather set in before the close of the week all over France, and there would be general agricultural rejoicing if England in 1905 had an old-fashioned Christmas. Frost is king in Central Europe from Konigsberg to Buda Pesth, but on the lower Danube the autumn is still reinging and winter conditions have not yet set in; hence the heavy exportation of cereals from Roumania and Servia from the 1st to the 16th inst. In Russia the autumn has been extremely favourable to sowing, and the germination of the grain. There is no reason to suppose that the town riots have affected the hundred million of agricultural folk, nor do we profess to understand the nature of "universal railway strikes" which permit of 200,000 tons of grain being moved week by week from the interior to the seaboard. This tonnage means the use of about 40,000 trucks, or at least 2,000 long trains, each requiring two engines, say, 2,000 ordinary one-engine trains. The agricultural centres of production are often a thousand miles or more from the seaboard, yet the new crops have been arriving week by week without a break ever since October.

The telegram received from India on the 15th was very unfavoura---, and has caused a firmer holding of Indian wheat. The want of rain up to December 14 was serious, for if December is rainless wheat and oilseed crops will never fully recover the effect. The telegrams from India expected on 22nd and 29th will be awaited with great impatience. The Indian Government are to be thanked for keeping the trade well informed by weekly telegrams. It is a pity that no similar telegrams are available from Canada, South Africa, or the Australasian colonies.

The American farmer has sown 31,341,000 acres with autumn wheat, and the grain is of an average promise. North of the U.S. frontier the winter is severe, and it is said by some that the large reduction in wheat supplies at Winnipeg and other centres is due to snowfalls blocking the rails. Other reports, however, say that the crop was greatly over-estimated by the officials. The need of better information concerning produceion in the Dominion is genuine and serious. On November 24 "Beerbohm's List" estimated the Candadian and Manitoba wheat crop, at 13,000,000 qr., but, so far as we have seen, "Dombusch's List" adheres to its estimate of September 15, which was 11,250,000 qr. only. This difference of 1,750,000 qr. is of very material importance to the markets.

The new maize crop in America is now beginning to get into motion, and there are heavy sales for January shipment at 20s. 9d. per qr., as an inclusive charge. This means that maize in England in February is likely to be on sale at 21s. 9d. to 22s. per qr., and, of course, if the flood of supplies is continuous during January and February, a still more reduced quotation may prevtil in March. Up to the 16th the quantity of new crop forwarded from the interior to the seaboard was 12,253,000 bushels, as compared with 8,102,360 bushels last year. At this rate exports are likely to be half as large again as they were last season.

New York maize prices are thus telegraphed:—
December 16, 1905, 17s 2d per 480lb.
December 17, 1904, 17s 8d per 480lb.
December 18, 1903, 17s 6d per 480lb.

The winter freights always tend to be higher than those of summer, but the present price is clearly one which admits of a fair profit so long as 22s. can be obtained in London. At Mark Lane on Friday 24s. was still obtainable, but the tendency was against holders.

The American Board of Agriculture reports that the maize, hay, wheat, and oat crops of 1905 considerably exceed in money value at currencies the value of 1904 production. On the other hand, potatoes and barley have lost ground as paying crops. Dairy produce has brough in a largely increased revenue. On its agriculture, as a whole, the American Republic is estimated to have advanced £51,200,000 on the year. This is a substantial addition to the financial revenue of any country.

Good prices for English oats are by no means confined to Mark Lane, where the mean value though good, does not come up to that at Canterbury or at Chichester. In the North, however, prices only range from 17s. to 18s., and the Norwich average 17s. 6d., is by no means high. English wheat has been fetching over 30s. per 480 lb, and 31s. 7d. per 504 lb. at Canterbury and other markets in the Home Counties, but has been as low as 27s. 10d. at Lincoln and Peterborough. Barley has averaged 27s. 10d. at Canterbury, 29s. 7d. at Chichester, 26s. 9d. at Chelmsford; but against these fairly remunerative prices have to be set 23s. 10d. accepted at Cambridge, 23s. 1d. at Doncaster, 24s. at Lincoln, 24s. 1d. at Peterborough, and 24s. 6d. at Nottingham. Wheat straw is selling well in London, also at Bristol, Birmingham, Derby, and Carlisle. It seems to be cheap at Liverpool and Edinburgh, and, but for its bulkiness, should pay to ship round to Bristol and London respectively. Oat straw makes 55s. per ton for best in London and at Manchester, Carlisle, and Edinburgh. It is cheap at Leicester, Liverpool, and even at Glasgow, which apparently could make 5s. per ton by sending its straw to Edinburgh. Barley straw, as usual, is rather a drug in the market, but rye straw sells well and deserves to do so, as it is of excellent value. Straw chopped and otherwise treated for inclusion in cattle rations seems to be gaining in favour. It goes well with the fattening meals now in vogue, and has more nutritive value in itself than is often supposed.

The sales of British wheat at the statute markets last week were above the average for December, and raise the total sold since harvest to a very large total.

This season, 1,306,000 quarters at 27s 6d per quarter.
Last season, 701,000 quarters at 30s 2d per quarter.

This great disparity fully explains the fall in price. The sales of barley have been:—

This season, 2,257,000 quarters at 24s 5d per quarter.
Last season, 2,162,900 quarters at 25s 0d per quarter.

The recent sales of barley have been about the same as in 1904, but earlier in the season the deliveries of 1905 were rather excessive.

Last week the sales of oats were small, and returns for the 15 completed weeks of the cereal year are as follows:—

This season, 427,000 quarters at 16s 9d per quarter.
Last season, 533,000 quarters at 16s 0d per quarter.

The imports of the United Kingdom last week were:—

Wheat, 354,000 quarters; a full average.
Flour, 144,400 sacks; a fair supply.
Barley, 166,200 quarters; over an average.
Oats, 144,000 quarters; a good supply.
Maize, 73,200 quarters; an exceedingly small supply.

The total imports of breadstuffs including flour as wheat amount to 7,652,500 qr., as compared with 8,863,100 qr. in the like period of last cereal year.

Supplies on passage include 1,866,000 qr. of wheat, thus made up:—

	Quarters.
Californian	360,000
American	283,000
Argentine	445,000
Russian	380,000
Indian	281,000
Australian	80,000
Various	40,000
Total	1,866,000

Flour on passage is below an average quantity, 288,000 sacks being the last return.

Of barley the supply in prospect is moderate of feeding, fairly good of brewing.

	Qrs.
Russian	120,000
Roumanian	15,000
Asia Minor	60,000
Californian	280,000
American	80,000
Various	40,000
Total	615,000

Of maize 745,000 qr. are on passage. This is not a large total. Of linseed 209,000 qr. are on passage. This is more than usual. The expectations of cottonseed, 50,000 tons, are decidedly above an average, but those of rice, 18,000 tons, are as decidedly below the mean.

The shipments of grain from America last week were liberal, without being extraordinary. Actual quantities were:—Wheat 243,000 qr., barley 90,000 qr., oats 263,000 qr., maize 281,000 qr., and flour 151,000 sacks. Argentine sent off 115,000 qr. of wheat, 89,000 qr. of maize, and 37,000 qr. of linseed.

Russia shipped reduced quantities of all the chief cereals, but the surprise is that shipments continue at all. Actual exports were:—Wheat 515,000 qr., barley 200,000, qr., oats 70,000, and maize 40,000 qr. These supplies were augmented by Roumanian exports of 233,000 qr. of wheat and 47,000 qr. of barley.

India shipped 142,000 qr. of wheat, a comparatively large quantity, and Australia sent off 48,000 qr., the first four cargoes of the new wheat crop or the last of the old. The harvest is in active progress in South Australia, and is nearly finished in New South Wales.

TO-DAY'S MARKETS.

MARK LANE, MONDAY, December 18.

[FIRST REPORT.]

Owing to English wheat being rather out of condition, and Manitoba wheat being in heavy supply, those two sorts to-day were obtainable at 6d. per qr. decline. On the other hand, the bad crop news from India caused the holders of Indian wheat in granary to ask 6d. advance. Russian, Roumanian, Australian, and Argentine sorts were unchanged. There was a little more business doing from the 11th. Maize was quiet, There were some buyers of Old American at 25s. 3d. ex granary, but most purchasers were content with the new crop at 24s. to 24s. 3d. per qr. Barley was rather cheaper for American and Russian, but quite firm for other kinds. Oats were unaltered for foreign, but 6d. dearer for English. Beans and peas are firm, and sold well at previous best prices. Linseed was fully 1s. dearer on the week. Rice, with a reduced supply on passage, tended to rise in price.

CLOSE OF THE MARKET.

THE MARKET CLOSED QUIETLY. MAIZE TENDED TO GO STILL LOWER THAN AT THE OPENING, BUT OTHER STAPLES WERE NOT QUOTABLY CHEAPER.

THE FLOUR TRADE.

MARK LANE, MONDAY, December 18.

There was a better feeling to-day, as there are a good many buyers who are making plans to carry on from now to the new year without having to come to Mark Lane during the last eleven days of the old year. The prices of Town Whites and Town Households were tending slightly in sellers' favour, and were sustained by Seth Taylor's Households, which wer firm at 25s. ex. mill. Some fine English flour mixed with the best foreign, and made by Hungarian process, realised 31s. 9d. per sack cash. Cascadia at 27s. to 28s., and Granardia at 26s. to 27s., were once more in evidence, as was Pillsbury and Gilt Edg at 22s., and the well-known Iron Duke brand at 22s. 6d. per sack. Feeding flour was quoted at 16s. 6d. for Washburns and 15s. 3d. for Red Dog. Despite the Russian anarchy, there was some freshly arrived Russian flour on sale at 26s. cash. It is of excellent value. Australia offers to ship flour from the new wheat crop in February at 23s. c.f.i. There are no buyers at our 22s. 6d. per sack. Some good Belgian flour made 27s. No price changes were quoted in country flour or in French. Bran, middlings, and pollard were all the turn in holders' favour.

LONDON TERM MARKET.

This market is open to elected members only and is held at the Baltic Club, St. Mary Axe. No business except for future delivery is done, and the smallest quantity that can be purchased is 1,000 quarters, or 4,800 cental.

Prices quoted on Saturday at the close of the week's trade were as follows:—

WHEAT (per cental).

No. 2 American Red	6s. 11d.	Dec. delivery.
,, ,,	7s. 0d.	Jan. ,,
,, ,,	7s. 0d.	Mar. ,,
,, ,,	6s. 10d.	May ,,

MAIZE (per cental).

American	4s. 10d.	Dec. 27-30 delivery.
,,	4s. 0d.	Jan. 29 ,,
,,	4s. 4d.	Jan. 31 ,,
,,	4s. 3d.	February ,,
,,	4s. 4d.	May ,,

Buyers of American wheat for future delivery this morning were willing to pay 6s. 11d. per cental, but not 7s. Business was small. For American maize, any date February 1 to May 31, 4s. 4d. would have been accepted, but only 4s. 3d. was offered, and the selling interest was quite firm in standing out for the penny on the cental difference.

GRAIN AND FLOUR FACTORS REPORT.

Flour.—Prices remain unchanged, and, as usual at the approach of Christmas, business is only of a limited character. GREENHILL BROTHERS (Belfast).

Offals.—A further advance of 2s. 6d. per ton is being quoted for bran; the demand continues steady.—GREENHILL BROTHERS (Belfast).

Flour unchanged, demand poor. Grain.—Indian corn quiet, buyers holding off, waiting cheaper lots just due. Beans steady, not much demand. Oats rather dearer. Peas quiet. Oil-cake firm. Barley dull. Oatmeal steady. Mill stuffs (bran and thirds):—Millers are still behind with orders.—MCKINNON AND MCDONALD (Glasgow).

The flour trade has been in a subdued state during the week, and with little demand to-day values remain about the same as on Monday last.—T. S. MEDILL AND SONS.

Wheat trade steady, and prices are unaltered. Flour is firm. Maize.—Plate is unchanged. Russian is 3d. lower. Barley and oats sell slowly at prices of last Monday.—COVENTRY AND CO.

Milling Offal.—There is no change to record; still firm at last Monday's prices.—JOHN BAWCOMB AND CO.

FEEDING STUFFS.

London, Monday.—Linseed cake: There is more business doing, and buyers are beginning to realise there is little chance of a weakening in prices for some time to come, especially as foreign stocks in London are almost cleared, and home crushers turn out very small quantities. Cotton cake: Trade rather quiet but prices well maintained. Linseed: In very good demand, and market advancing rapidly.

STATE OF TRADE.

Wheat cargoes are quiet for all sorts save Indian, which are 3d. up. Maize is unchanged for flat, rather firmer for cargoes of yellow. Barley and oats are steadier, while linseed and rice cargoes are held for an advance.

BUSINESS DONE.

WHEAT.—Rosario, 32s per 492lb., on passage; Rosario, 21s 9d per 492lb., January shipment; Rosario, 30s 9d per 492lb., March shipment; Bahia Blanca, 33s per 504lb., on passage; Bahia Blanca, 32s 9d per 504lb., February shipment; Red Walla, 32s 3d per 500lb.,, prompt; White Kurrachee, 34s 3d per 492lb., arrived; No. 1 Northern Manitoba, 32s 9d per 480lb., on passage; No. 1 Northern Manitoba, 32s 3d per 480lb., February shipment; Roumanian, 31s 6d per 492lb., prompt shipment.

BARLEY.—Crimean, 21s per 400lb., prompt shipment; Californian, 27s 3d per 448lb., on passage.

OATS.—American, 17s 3d per 320lb., December shipment; Black Irish, 18s 6d per 312lb., December shipment.

MAIZE.—Argentine, 23s per 480lb., arrived; American, 20s 9d per 480lb., February shipment.

PEAS.—New Zealand, 35s per 504lb., prompt shipment.

LINSEED.—Calcutta, 42s per 410lb.,, arrived; Calcutta, 41s 9d per 410lb., on passage; Bombay, 43s per 416lb., prompt shipment; Argentine, 40s 6d per 416lb., February shipment.

RAPESEED.—Ferozepore, 39s per 416lb., April shipment.

POPPYSEED.—Indian, 45s per 377lb., prompt shipment.

COTTONSEED.—Egyptian, £5 15s per 2,240lb., prompt shipment.

RICE.—Rangoon, 7s per 112lb., prompt shipment; Saigon, 6s 6d per 112lb., prompt shipment; Siam, 6s 9d per 112lb., prompt shipment.

THE HOLIDAYS.

Mark Lane will be closed from the 22nd to the 27th, the Term Market from the 23rd to the 27th, and the Baltic from the 23rd to the 27th. The usual Monday markets at Darlington, Stamford, and St. Ives will not be held. The Scotch markets will be held as usual on the 25th and 26th, but New Year's Day will be a general holiday in North Britain, as it is in America and on the Continent. The Stock Exchange will be closed on December 25 and 26, and on January 1.

HOPS.

London, Monday.—W. H. and H. Le May, 67, Borough, London, report: There is nothing fresh to report. The market is quiet, and it is expected that it will remain so until after the Christmas holidays are over. Stocks to be carried over to the new year are the smallest for many years.

CATTLE.

Metropolitan Market, Islington.

	Monday, Dec. 18, 1905. British.	Total.	Monday, Dec. 19, 1904.
Beasts	610	610	870
Sheep and Lambs	5,110	5,110	3,910
Calves	10	10	10
Milch Cows	40	40	40

Quotations per 8 lb. (sinking the offal):—

ENGLISH.

	Inferior.	Second.	First.
Beasts	2s 10d	3s 6d	4s 10d
Sheep	4s 10d	5s 4d	6s 0d
Lambs	4s 8d	5s 10d	7s 0d

Milch cows, per head, £16 to £22 10s.

British arrivals include as follows: Scotland, 20; Eastern Counties, 114; Midland, Home and Western Counties, 302; Devon, 30; Ireland, 54.

We note to-day a decrease of 1,900 head, compared with Monday last. As is usually the case on a Monday following the Great Christmas Market, trade was a generally slow one, sellers being willing to accept 2d. less money to effect sales. The arrivals from Ireland were much shorter, and consisted of 44 Dublins (14 of which were black polled cattle) and 10 choice Waterfords, trade for which was extremely dull at a decline on last week's currencies. Fat butchering cows and bulls were in average supply but met with a limited demand from both Town and Country buyers. A clearance is considered to be very doubtful.

The following are top quotations per 8 lb. (sinking the offal):—

	To-day.	Monday, Dec. 19, 1905.
Scotch	4s 8d to 4s 10d	4s 10d to 5s 0d
Devons	4s 4d to 4s 6d	—
Herefords	4s 4d to 4s 6d	—
Norfolks	4s 2d to 4s 4d	4s 6d to 4s 8d
Runts	4s 0d to 4s 4d	4s 4d to 4s 6d
Lincolns	3s 10d ex 4s 0d	4s 0d to 4s 4d
Irish	3s 10d to 4s 0d	4s 2d to 4s 6d
Fat Cows	3s 4d to 3s 6d	3s 6d to 3s 8d

There was a decrease of 5,220 in the number of sheep and lambs penned compared with Monday last. Trade for all grades of wethers and ewes was of a very disappointing nature, a decline of 2d. per 8lbs. having to be accepted in most cases to effect sales, this being partly attributed to the overstocked state of the Dead Stock Market. The season for Scotch is now practically at an end, none being on offer to-day. Irish shared in the general depression, and were quot d 2d. lower. Lambs were in excess of the demand, salesmen having to accept 2d. less money to force sales. A clearance will not be made.

Undermentioned quotations are at per 8 lb. (sinking the offal), and are for the best of each class penned:—

	To-day.	Monday, Dec. 19, 1904.
7½ to 8 st Downs Tegs	5s 10d to 6s 0d	5s 8d to 5s 10d
9 st Downs	5s 8d to 5s 10d	5s 6d to 5s 8d
10 st Half-breds	5s 4d to 5s 6d	5s 2d to 5s 4d
10 st Irish	5s 4d to 5s 6d	5s 4d to 5s 6d
10 st Down Ewes	4s 0d to 4s 2d	4s 0d to 4s 2d
11 st Halfbred Ewes	3s 10d to 4s 0d	4s 10d to 4s 0d
5 st Down Lambs	6s 10d to 7s 0d	7s 0d to 7s 2d
6 st Halfbred Lambs	6s 4d to 6s 6d	6s 6d to 6s 8d

Calf trade nominal.

No pigs on offer.

London (Central), Monday.—Good supplies, fair demand. Beef: Scotch, 3s 10d to 4s 4d; English, 3s 4d to 5s 6d; American, 3s 2d to 3s 8d. Mutton: Scotch, wethers, 4s 4d to 4s 6d; ewes, 3s 2d to 3s 4d; English wethers, 4s to 4s 6d; ewes, 3s to 3s 4d. Lamb: New Zealand, 2s 8d to 2s 10d. Veal: 3s 4d to 3s 8d. Pork: 4s to 4s 8d.

St. Ives (Hunts), Monday.—Beasts, 141; sheep, 525; pigs, 322. Beef, 7s 3d to 8s; mutton, 7s 7d to 10s 6d; pork, 6s 6d to 7s 6d. Fat and store cattle and pigs, sharp trade; mutton slightly slower; milch cows, short supply, prices £15 to £22.

Deptford, Monday.—Beasts, 800. To-day's supply, compared with Monday last, showed an increase of 260 head, and consisted of 475 from the United States and 325 from Canada. Trade was of a slow nature at a considerable decline in value. Best States were quoted at from 4s to 4s 3d; seconds, 3s 11d; Canadian, 3s 8d to 3s 10d per 8lb (offal given in). On Saturday, 2,047 beasts from the United States were offered for sale. Trade was firm. Some choice quality (Christmas quality) making from 4s 6d to 4s 8d. Ordinary States were quoted at from 4s to 4s 4d per 8lb (sinking the offal).

SEEDS

London, Monday.—In spite of the holiday season being nearly on us, there is a fair trade passing in both clovers and grasses. Prices firm for the former and rising for the latter. There is more inquiry for spring tares, but no business, prices apparently too high for a start.—JOHN PICARD AND CO.

PROVISIONS

London, Monday.—Bacon: The arrivals of bacon last week were from Ireland 2,670 bales, and from foreign ports 11,071. The bacon market was quiet last week, especially for Canadian bacon, which was selling at fully 1s to 2s less money. Prices ranged:—Irish, 59s to 61s up to 66s; Danish, 54s to 61s up to 56s; Canadian, 52s to 54s up to 56s and 57s. Butter: The butter market was firm, with:—French, 108s to 123s; Danish, 113s to 121s; Russian, 97s to 108s; Australian, 104s to 116s; New Zealand, 11s to 117s; Argentine, 112s to 114s; American, 92s to 106s. Lard: The market was firm for lard:—Irish, 56s to 64s; Danish, 56s to 61s; American, 39s 6d to 41s 6d.

LIVE STOCK AND MEAT TRADE REVIEW

(WRITTEN SPECIALLY FOR THE "MARK LANE EXPRESS.")

Trade in London.

The chief feature in regard to the cattle trade this week has been the holding at Islington, on Monday last, of the "Great Market Day," a day on which breeders and graziers vie with each other in sending their best stock forward for Christmas consumption. Of course, as usual, on this day both Scotch and Devon cattle were in considerably larger numbers. The dense fog which prevailed in the early morning made trade of an exceedingly slow and heavy nature; nevertheless, notwithstanding there was no sign of it uplifting, sales became a little brisker about 11 a.m.; the prices, however, remained considerably lower than on the previous big market day. Only choice quality cattle, however, can be said to have made much headway, middling descriptions meeting with very little inquiry. Fat butchering cows met with little demand; nevertheless, last year's values were well upheld. Bulls, on the other hand, were slow, but steady at a slight advance. The Irish consignments consisted pricipally of Dublins, including a few Shorthorns and 10 stores; these latter were not sold. On Thursday trade was slow at last week's quotations.

At Deptford trade throughout the week was of a firm and steady nature, at an advance in value, some especially choice Christmas-quality cattle being offered for sale. The total number on offer at both markets was 6,201, as against 5,689 on the corresponding day last year, showing an increase of 512 head, consisting of 2,840 British (increase 130) and 3,361 foreign (increase 382), these latter comprising 3,161 from the United States and 200 from Canada. The following were the top rates obtained per 8lb. (sinking the offal): 90 to 100 stone Scotch, 4s. 10d. to 5s.; 95 stone Herefords, 4s. 6d.; 95 stone Runts, 4s. 4d. to 4s. 6d.; 90 to 100 stone Polled Norfolks, 4s. 8d. to 4s. 10d.; 100 stone Lincoln Shorthorns, 4s. 2d. to 4s. 4d.; 100 stone Dublin Show cattle, 4s. 10d. to 5s.; 95 stone Irish, 4s. 2d. to 4s. 4d.; 100 stone Devons, 4s. 8d. to 4s. 10d.; 90 stone fat cows, 3s. 6d. to 3s. 8d.; 90 stone States beasts, 4s. 4d. to 4s. 6d.; 95 stone Canadians, 3s. 10d. to 4s.

Of sheep at Islington there was a full supply, as usual, Downs and Halfbreds predominating. Trade, though slow, ruled pretty steady, late values being well maintained, and in some cases slightly surpassed. Scotch were short in point of number, and cleared early in the day; Irish, on the other hand, met a dull trade.

Lambs met with a fairly steady inquiry, the majority being cleared early at good money. On Thursday, although no decline in value can be noted, there was very little demand owing to the marked absence of retail buyers. No sheep were offered for sale at Deptford. The total number of sheep and lambs penned at Islington was 12,050, as against 12,950 on the corresponding day last year. Best pens of sheep made per 8 lb. as follows: 8½ to 9 stone Down tegs, 6s.; 9 stone Suffolks, 5s. 10d. to 6s.; 10 stone Down wethers, 5s. 6d.; 8 stone Scotch, 6s.; 10 stone Halfbreds, 5s. 6d.; 10 stone Irish, 5s. 4d.; 10 stone Down ewes, 4s. to 4s. 4d.; 8 stone Hampshire tegs, 6s.; 11 stone Lincolns, 5s. 4d. to 5s. 6d.; 4½ to 5 stone fat Down lambs, 7s. to 7s. 2d.; 5½ to 6 stone Halfbred Dorsets, 6s. 4d. to 6s. 8d.

Calves numbered 40. Trade not worth noting or quoting.

No pigs on the market.

Trade in the West.

As we are now within a week of the Christmas season attention is naturally closely absorbed by the fat stock sales in progress all over the country, and which cannot be said to be attended, on the whole, by otherwise than satisfactory results—at least, this is the outcome, as far as we can gather, of the generality of the sales held in the Western and South-western districts. The beef trade, as is generally the case, undoubtedly contrasts very favourably with mutton, both in regard to demand and to price. Purveyors have been eagerly on the alert for the very best class of beasts procurable, particularly Devons, which have been in even greater favour than in previous years. Both steers and heifers of this breed seem to meet the every requirement of purveyors at this particular season, and hence the eager demand for this class of beast, the great bulk of which have returned their owners from 12s. to 13s. per score where they have been turned out of hand with the finish so essential in beasts specially wanted just for the present. The best class of steers and heifers are making from £26 to £33 apiece for good weights, and for neater-handling beasts from £18 to £25, these quotations applying to the very choicest qualities. Secondary grades are also finding a very good market at from 11s. to 11s. 6d. per score; but half-fat beasts are but little wanted, even at low rates, as every one is centring their attention for the time on one thing—quality—and that seems to be the leading principle guiding all transactions just now. Compared with last year's rates prices are about 1s. per score better all round for beef. Veal, too, of good finish is also selling very well, especially those of first quality, for which buyers are freely paying up to 9d. per lb. (or from £4 to £6 apiece); those scarcely so choice, but not by any means to be classed as secondary, making 8d. to 8½d.; more ordinary runs meet an indifferent sale at from 7d. to 7½d. Mutton has by no means recovered from the depression from which the trade has been suffering, except in respect to wethers and tegs of a very choice stamp, which are commanding very close attention, especially where at all suitable for "show" purposes, when they make 8½d. to 8¾d. per lb. for nice weights with an absence of coarseness, as also do young ewes of a good stamp, for which butchers are giving 7½d. to 8d.; but anything that is outside the category of "choice" is much neglected and anything but easy to cash, even at 6d. to 7d. per lb. Choice suck lambs are, as usual, a good deal wanted, and anything at all fit for show makes 10d. to 11d.; but the ordinary run of lamb is altogether neglected. However well anything else is selling, there is nothing at present to approach small porkers, which sell freely up to 12s. per score and over, baconers being almost as dear, their range of value being from 10s. to 11s. 3d. Heavier weights in pigs are also very saleable at good prices; but for good sure returns there is nothing to compare with the neat porker or medium-size baconer, the present value of which has not been equalled for years.

Trade in Scotland.

The number of cattle on offer this week has been a full average, and the general quality good throughout. A steady demand has been experienced, and prices on the whole well maintained. Fat cows have made rather more money. A large show of fat sheep, and the quality also very good. For those adapted for shop purposes prices have been well maintained, but London sheep have, in some cases, suffered a fall of 1s. a head. Ewes were shown in smaller numbers, and for this class rather more money has been got. Fat calves selling dear, while pigs continue to make recent high prices. For the time of year there was a fair supply of store cattle. Anything of a good class met rather a better inquiry at prices just a shade higher, and a clearance of the better lots effected. Store sheep slightly more numerous, and plenty of inquiry for everything of a good description. The best class of milch cows sold exceedingly dear. Quotations:—Top price of best cattle per live cwt., 38s.; current, 35s. to 37s.; mutton, 7d. to 9½d. per lb.—JOHN SWAN AND SONS, LTD.

Trade in Ireland.

For a home Christmas market supplies of catttle and sheep in last Thursday's Dublin Market were very deficient, and this was especially felt in the shortage of really well finished beasts. Numerically, the numbers were greater in both sections, but class was distinctly wanting. The attendance of home and export buyers was well up to the average, but business may be described as slow all round, as would-be purchasers could not find what they wanted, though quite prepared to pay well for it. Fine quality of well-finished stall-fed cattle were very scarce, and brought more money, but the right sort were "few and far between." Prime Shorthorns and Black Polled beasts made (live weight) from 34s. to 36s. per cwt. Good ordinary beasts made from 25s. to 30s. per cwt. Fat cows were a very difficult trade, and large numbers of rough, thin bullocks and heifers had to be held over unsold, much indifference being displayed towards such classes by buyers.

The cattle offered for sale were 4,025, or an increase of 381 head on the previous week. Dead weight, best ox and heifer beef was sold at from 50s. up to 56s., and for very choice up to 60s. per cwt.; good second-class beef from 45s. to 46s., and inferior from 42s. upwards.

There was a large offering of sheep, over 7,000, or 1,381 in advance of previous market, but, as cattle, quality was defective. There was a fair demand for good mutton for the Home and North of Ireland trade, but a very moderate export business was done. The majority of the market was made of nothing more than stores, and a great number of these had to be held over unsold.

Prime wether mutton made from 7d. to 7½d. per lb.; ewe, 6d. to 6½d.; and inferior from 5d. per lb. upwards. Hoggets sold at from 32s. each for small, up to 55s. for best heavy. Choice veal was quiet, but sold readily at from 7d. to 8d. per lb., but coarse calves neglected at from 5d. to 5½d. There was a large market of milch cows, but, as is usual about this time of year, buying was slack, and a late tedious finish was made. For very choice heavy springers up to £20, and occasionally £22 and £23, was given, but ordinary cows were slow. Store cattle still dull and quiet. Several large sales were held in Dublin. Trade in the country districts very flat. The pig market was well supplied, and there was a good attendance of buyers present. Trade was at first of a very dragging nature, owing to buyers endeavouring to bring down prices, but, seeing sellers determined, business improved after a little, and an early finish at about last week's currencies was effected. Choice light-weight pigs from 50s. to 54s. per cwt.; coarse, 42s. to 45s.; and inferior from 35s. per cwt. upwards.

LONDON.

London (Central), Thursday.—Trade, taken as a whole, was dull and dragging, salesmen having to accept 2d per 8lb less money in most cases to effect sales. Fat butchering cows and bulls also shared in general depression, making 2d per 8lb less money. Top prices per 8lb: 80st to 90s Scotch, 4s 8d to 4s 10d; 95st black polled Norfolks, 4s 8d; ordinary ditto, 4s 4d to 4s 6d; 90st Devons, 4s 6d; 100st Lincolns, 4s to 4s 2d; 95st runts, 4s to 4s 4d; 90st fat cows, 3s 6d; fat bulls, 2s 10d to 3s 2d. Increase of 1,320 in number penned in sheep market, supply consisting chiefly of Downs and half-breds, and very small consignment of lambs, for latter trade was not worth noting. Sheep trade slow but steady, last Monday's money governing all transactions. Best pens made, per 8lb, as follows:—8½st to 9st Down tegs, 5s 10d to 6s; 10st Down wethers, 5s 6d; 10st half-breds, 5s 4d to 5s 6d; 11st Lincolns, 5s 4d to 5s 6d; 10st Down ewes, 4s to 4s 4d. Calf trade slow but firm. Quotations, per 8lb, sinking the offal:—Beasts, 2s 10d to 4s 10d; sheep, 4s 8d to 6s; calves, 3s 10d to 5s 6d.

London (Central), Friday.—Heavy supplies were on offer, for which a slow inquiry again prevailed. Arrivals of beef included 160 tons Scotch, 220 Liverpool sides, 2,300 hindquarters and 1,500 forequarters American refrigerated; also 1,050 Argentine chilled hindquarters and forequarters. Quotations: Beef: Scotch short sides, 4s to 4s 4d; long sides, 3s 8d to 3s 10d; extreme, 4s; English, 3s 4d to 3s 6d; American (Deptford killed), 3s 3d to 3s 5d; extreme, 3s 6d; Liverpool sides, 3s 2d to 3s 4d; American refrigerated hindquarters (best), 3s 4d to 3s 8d; forequarters, 2s 4d to 2s 6d; Argentine chilled hindquarters, 2s 4d to 2s 8d; forequarters, 2s to 2s 2d. Mutton: Scotch wethers, 4s to 4s 8d; ewes, 3s 2d to 3s 4d; English wethers, 4s to 4s 6d; ewes, 3s to 3s 4d. Lamb: New Zealand, 2s 8d to 2s 10d. Veal: English and Dutch, 3s 8d to 4s 8d. Pork: English and Dutch, 4s to 4s 8d per 8lb.

COUNTRY.

Ashford, Tuesday.—Best beef made better prices owing to the demand for Christmas trade. Prime steers, 4s 8d to 5s; and show bullocks, occasionally 2d more. Rough cattle and cows neglected. Mutton sold readily. Downs, at 6s 4d to 6s; Kent wethers, at 5s 2d to 5s 10d; and ewes, 3s 8d to 4s 2d. Veal dearer, making up to 5s 8d. Pork unchanged, roasters making 4s 8d.

Berwick, Saturday.—The number of beasts penned was 226, 96 less than the previous week. The attendance of farmers and buyers was small. Quality of stock fair, and trade slow. Calves, £4 to £5 10s; stirks, £10 to £11 10s; two-year-olds, £11; shorthorn bulls, £10.

Birmingham, Tuesday.—Fair supply of pigs. Small supply of beasts and sheep; trade slow. Quotations:—Beef, 5d to 6d per lb; Herefords, 6½d per lb; mutton, 6½d to 9d per lb; bacon pigs, 9s 6d per score; cutting pigs, 9s 6d to 10s per score; porkets, 10s 9d to 11s per score; sows, 8s to 8s 3d per score.

Bristol, Thursday.—Beef fair supply. Best Devons, 65s per cwt; shorthorns, 60s to 63s per cwt; best ordinary, 56s per cwt; secondary, 52s per cwt; 400 store cattle offered at late rates. Small supply of mutton; best down wethers, 8½d to 9d per lb; prime wethers, 8d to 8½d per lb; heavy, 7½d per lb; ewes, 6d per lb. Moderate show of pigs; bacon, 9s 6d per score; porker, 10s 9d per score.

Canterbury, Saturday.—Very little business doing in store stock. Yearlings are selling from £8 to £9 10s, and calves from £4 10s to £5 10s per head.

Calne, Friday.—Present prices for prime pigs, in lots of not less than ten, on rail within 100 miles of Calne.

Prime Stores.	Thickness of fat in any part of Back.	Price per Sc. s.	d.
6sc. 10 lb. to 9 sc. 10 lb...	2½ in. and under	9	6
Under 10 sc.	Not exceeding 2½ in. ...	9	6
Under 11 sc. 10 lb.	2¾ in. ...	9	0
Under 12 sc.	3 in. ...	8	6

C. AND T. HARRIS AND CO., LTD.

Carlisle, Saturday.—Small supply on the Sands, and trade was practically at a standstill. Wintering heifers, £10 10s to £12 10s each.

Chester, Thursday.—An average supply of stock of all descriptions, with a good attendance of buyers. The quality of the cattle was generally good, and the demand keen, especially for sound milking stock, in which dealers did a very satisfactory trade. Prices all round were a little firmer. Milch cows, £17 to £22; calvers, £14 to £18; barrens, £11 to £14; stirks, £7 to £11.

Colchester, Saturday.—Trade was good, and stock of all kinds in short supply. Beef, 4s to 4s 6d per stone; mutton, 5s 6d to 6s; pork, 9s to 9s 6d per score.

Doncaster, Saturday.—Average supply of cattle, but only a poor show of milch beasts, which were hardly so dear as last week. Moderate demand for other kinds. Milch beasts, £16 to £22; bullocks, £12 to £17; heifers and drapes, £10 to £15; young stocks, to £9. Small supply of sheep, and trade very slow. Hoggs, 6s to 43s each.

Dorchester, Saturday.—For a second sale there was a very good supply of Christmas beef and mutton at Messrs. Ensor and Son's sale to-day, with a good sprinkling of stores, including some specially good milch beasts. Fat beasts found a ready sale for the best steers and heifers, the former ranging from £22 to £28 (for a grand quality Longhorn), or 11s. to 12s. per score; fat heifers, £18 10s to £21 (or 10s. 6d.); fat cows, £14 10s to £17s (or 9s. 6d. to 10s.), with a quiet sale. Dairy beasts in active request for best milchers at £17 10s to £22 10s. each; and plainer grades from £13 10s to £15 18s; barreners, sold from £19 to £21 10s per pair; stirk heifers, £15 10s to £16 10s. For mutton there

was a good inquiry for wethers at 55s to 63s (or 8d to 8½d per lb.); and ewes, 52s to 54s 6d; lambs, 35s to 38s 6d; a good clearance.

Dublin, Thursday.—Numbers in market: Beasts, 4,025, increase 381; sheep, 7,067, increase 1,381; calves, 40, increase 7. A larger show of cattle, and with buyers in a cautious mood, trade was scarcely on as firm a basis as last week, except for really choice qualities suitable for home trade. Rough sorts in excess of demand and difficult to clear. Some beautiful heifers, fed by Mr. Cornwall, of Navan, were much admired, and realised top price for their class. Sheep a rather disappointing trade, and, except for fancy lots, late rates were difficult to maintain, and a clearance could not be effected. Cattle, live weight (best), 22s to 23s per cwt; extra for choice Angus crosses, 35s 6d per cwt; secondary and inferior sorts, 24s to 28s per cwt. Mutton, dead weight, 5½d to 7½d per lb.—GANLY, SONS AND CO.

Edinburgh, Wednesday.—Black polled bullocks, £11 10s to £15; coloured, £10 10s to £13 13s; stirks, to £10; half-bred hoggets, 32s to 38s; half bred hoggs, 34s to 42s; Cheviot wethers, 36s to 39s; best shorthorn cows, to £26; crosses, £23; Ayrshires, £14 to £19.

Exeter, Friday.—Being the first market after the fair, supplies were short, and there was but little demand. steers and maiden heifers made 11s and cows 10s. Late prices were maintained at 8½d to 9d for small-size sheep. A number of keeping sheep sold at 32s to 38s. Calves, 7½d to 8d.

Glasgow, Wednesday.—Demand fair and prices steady. Top Scotch cattle, 64s; current, 58s to 60s; top Irish, 56s per cwt; top hoggs, 9½d; ditto heavy-weights, 9d; wethers, 8d to 8½d; ewes, 6d to 7½d per lb. Dead meat firm; Scotch beef, 6d; States, 5½d; Canadian, 5½d per lb.

Gloucester, Saturday.—Messrs. Bruton, Knowles and Co. report their sales as follows: 70 cows and calves and incalvers, with a good attendance of buyers and a total clearance effected. A small supply of store cattle, with a better demand.

Leicester, Saturday.—Fair average consignments of home-bred stock. Buyers were not well represented, and trade ruled active for choice qualities. The finest milch cows sold readily at £20 to £24, good lots £17 to £19, inferior £15 to £16, shorthorn bullocks £11 10s to £15, Welch cattle £9 to £12, young stock £5 to 8, calves, 20s to 35s.

Lincoln, Friday.—A small attendance. Store beasts met with a slow trade. Yearlings, £10 to £12; two-year-olds, £12 to £16. The sheep pens were poorly filled, and there was little inquiry. Hoggs realised 40s. each.

Manchester, Friday.—Beef: First class, 4½d; second class, 4d to 4¼d; third class, 3d to 3½d. Mutton: First class, Cheviots, Scotch, 7½d; others, 7¼d; second class, 6½d to 7d; third class, 5½d to 6d. Veal: First class, 7¼d.; second class, 6½d to 6¾d; third class, 5½d to 5¾d. Bacon pigs: First class, 5¾d; second class, 4¾d to 5¼d; third class, 3¾d to 4¼d. Porket pigs: First class, 7d; second class, 6½d to 6¾d; third class, 6d to 6¼d.

Norwich, Saturday.—Trade firm for fat beasts, which were in small supply, an advance of 3d to 6d per stone being recorded; prices for best qualities were 7s 6d to 8s 6d per stone. Large supply of store animals, prices, which were about the same as past two or three weeks, being £6 to £15 per head. Poor trade for store sheep, which were penned in small numbers, prices being 35s to 45s per head; fat sheep made from 9s to 10s 6d per stone, and were in large supply. Improved trade for fat pigs at 6s 9d to 7s per stone.

Nottingham, Saturday.—There was a short supply of milch beasts. Best cows realised £18 to £22; in-calf heifers, £14 to £18; strong heifers and steers, £10 to £12; and younger beasts, £6 to £10; calves, 26s to 50s each.

Preston, Wednesday.—A slow trade was experienced all round although there was a good supply of both cattle and sheep. Cows and bulls, 5¼d to 5¾d; heifers and bullocks, 5¾d to 6¼d; hoggs, 8½d to 9d; tups, 5¼d to 6d; ewes, 6¼d to 7d; lambs, 8½d to 9d per lb.

Retford, Saturday.—Milch cows of really good quality were inquired for, but were scarce. Medium-class remained at £14 to £17; healthy steers and heifers, £10 to £12; and calves, 40s per head.

Romford, Wednesday.—The Christmas live stock show attracted a large attendance. Fat beasts were in large supply, and trade for best animals was good at 4s 6d to 4s 8d; middlings, 4s to 4s 2d per stone. Calves were in short supply; trade about the same, at 5s 2d to 5s 4d per stone. Sheep in large supply; trade unchanged. Best, 5s 8d to 5s 10d; middlings, 5s 2d to 5s 4d; ewes, 4s to 4s 4d per stone. Large supply of pigs; trade fair at late rates.

Shrewsbury, Tuesday.—Beef, 5d to 6¼d per lb; mutton, 7¾d to 9d per lb; veal, 7¼d to 8d per lb; porket pigs, 9s to 9s 6d per score; bacon pigs, 8s 9d to 9s 9d per score. Small supply of store cattle, but good of fat stock, mostly for Christmas trade. Good attendance and trade.

Truro, Thursday.—Fat bullocks, 54s to 60s per cwt.; barreners and store bullocks, 40s to 45s per cwt.; cows and calves, £10 to £17; rearing calves, 20s to 35s; wethers, 7d to 7¾d per lb.; ewes, 5½d to 6d; lambs, 7¼d to 8d; pigs, 8s 9d to 50s each.

Wolverhampton, Thursday. — Large supply of beasts; slow trade. Fair supply of sheep; good trade. Beef, 5d to 6¼d per lb.; mutton, 6d to 9d per lb.; veal, 6½d to 7¼d per lb.

FOREIGN.

Yorkhill, Monday.—At the usual weekly sales of cattle held at the Foreign Cattle Wharf to-day small supplies were on offer, only 193 animals being penned in the lairages. There was a fair attendance of wholesale and retail buyers. Bullocks of useful weights and size met a good demand, and superior animals were keenly bid for, but lower qualities were slow to sell. Owing to the limited supply and no imports due for several days, prices advanced from 2s to 4s per cwt dead weight over last week's quotations, and a number of animals were also sold to weigh at the increased rates. Bullocks of handy sizes and weights for all trade purposes sold from 56s to 58s per cwt dead weight, while a number of first-class animals made up to 60s per cwt, and prime bulls realised 45s per cwt dead weight.

WET GRAINS.

London, Saturday.—Wet grains: Prices are somewhat lower, owing to milder weather and extra brewings, preparatory to Christmas; ale at 20s to 21s, and porter 16s 6d to 17s 6d per ton. Wet distillers' grains are also easy from 30s per ton. Pressed white distillery meal, 35s per ton. Dried grains are without change: ale, 10½s 6d; mixed, 9½s 6d, and distillers', 11½s per ton. Dried distillery meal, containing 45 to 50 per cent. oil and albuminoids, without change, 117s 6d per ton. Molasses feed, 90s per ton. Pure cane molasses (treacle) for cattle feeding, 92s 6d to 93s 9d per ton, according to rails. All the above are free on rail London.—HAMLYN AND CO., 37 and 38, Mark Lane, E.C.

FEEDING STUFFS.

Hull, Tuesday. Linseed: Linseed opened firm, but later lost about 9d per quarter, closing steady at 5d up from the lowest. River Plate: Spot, 38s 3d paid after 38s taken afloat, and November December 38s 6d nearest, January February 38s. Cottonseed: There was a further improvement in the market during last week, and up to £5 15s paid for Egyptian spot, afloat and December-January shipment; but there has been a quietness the last day or two, with £5 13s 9d taken yesterday and to day £5 12s 6d the value all these positions. A little February-March changed hands at £5 16s 3d, with sellers to-day at £5 15s. A fair business done in Bombay at £4 17s 6d to £4 17s November December, £4 16s 3d to £4 16s 6d December-January, and £4 16s 3d to £4 15s 9d January-February. Oilseed cakes.—Linseed cakes: A quiet demand, but prices remain very firm. Foreign are scarce, and are likely to continue so. Cotton cakes: Firm for best. Bombay, 1s 3d to 2s 6d per ton dearer. Decorticated meal: Spot about cleared, but there is some nearly due.—KEIGHLEY, MANSTED AND CO.

London, Friday.—Linseed: Market continues strong, with good demand for all positions both from U.K. and Continent. Calcutta-London, spot 42s, afloat 42s, October-November 42s, November-December 42s, April-June 40s. Hull: Good business doing in spot seed and also forward positions. La Plata spot 40s, passage 40s, November-December 41s 9d, December-January 40s, and January-February 3s 9d. Rapeseed firm and sellers very reserved, but buyers so far not much in evidence. Yellow Cawnpore November-December 43s 6d. Yellow Guzerat 45s 6d. New crop, March-May shipment, yellow Guzerat 44s 6d, yellow Cawnpore 43s 9d, brown Cawnpore 40s, Ferozepore 39s. Brown Calcutta new crop 38s 9d. Cottonseed has declined a little, but at the close is rather firmer, Alexandria having advanced. London: Passage £5 15s, December-January £5 15s, and January-February £5 16s 3d. Hull: Spot and passage £5 12s 6d, December-January £5 12s 6d buyers.—THE PRODUCE BROKERS CO.

Mark Lane, Monday. Linseed cakes: With decreasing stocks and a decided improvement in the demand, coupled with a further advance in seed, values again tend upwards, and there is every indication of higher prices being realised. Russian are becoming scarce on spot, while importers ask 2s 6d per ton more money. American may still be bought at last week's prices. East India seed pures make slightly more money. London made meet a steady trade, and are unchanged in value. Cotton cakes: A fair quantity of Egyptian now available in warehouse, and with only a moderate demand values remain quiet and without alteration, while English and Bombay find a slow sale at last week's quotations. Decorticated: London made continue in good request, being relatively cheaply offered at £6 17s 6d for cake, £7 for meal, and £5 5s for special digestive meal. Rape cakes scarce. East India unchanged. Ravison none. Maize germ meal: A steamer parcel of white American nearly due is obtainable at £5 17s 6d free to trucks, but English makes are still sparingly offered at £5 18s 9d to £16. Maize gluten meal may be bought at £6 per ton for monthly deliveries during next year. Rice meal: Very little offers in Rangoon, but a fair quantity of Saigon has changed hands at 92s 6d, while 97s 6d has been paid for White Garden Siam. Broken Rangoon rice in bags is good value at £4 17s 6d to £5 per ton. Locust beans are rather more inquired after at £5 10s per ton for whole and £5 15s per ton for kibbled. Nitrate of soda is fully as dear, at £10 10s per ton ex quay, for present or spring delivery.

MOLASSINE FEEDING MEAL, packed in bags of 1 cwt each. Price per ton, £6 15s., in ton lots and upwards. £7 10s. per ton in less than ton lots. Free on rail, Liverpool or London. Uniform delivered price for small quantities, 10s. per bag of 1 cwt.

HAY AND STRAW.

Birmingham, Friday.—Small supply; trade quiet. Quotations:—Hay, £3 10s to £3 12s 6d per ton; clover, £4 per ton; straw, 2s 6d per cwt.

Derby, Friday.—Best clover, 80s to 90s per ton; wheat straw, 60s to 70s per ton; pressed straw, 50s to 55s per ton; oat straw, 50s to 60s per ton; peat moss litter, 35s to 40s per ton.

Manchester, Friday.—Hay, 4½d to 5d; clover, 5½ to 6½d; straw, wheat, 3½d; oat, 3½d to 4d per stone.

Whitechapel, Saturday.—Large supplies on offer met with slow support at following prices:—Best clover, 72s to 80s; inferior ditto, 60s to 70s; specially picked hay, 72s 6d; good ditto, 60s to 70s; inferior ditto, 45s to 57s 6d; mixture and sainfoin, 67s to 72s 6d; straw, 25s to 33s per load.

HOPS

Worcester, Saturday. — There is nothing fresh to report. The market keeps very firm, and few holders will offer their hops till the New Year, in the hope of better prices then. Yearlings sell from time to time. Forty pockets of new hops have been weighed this week, making 28,314 to date.—CHARLES FARAM AND CO.

CHEESE.

Glasgow, Wednesday.—Arrivals of home cheese were moderate this week, with a quiet trade passing. Holders still continue firm in their ideas. Cheddare, 60s to 63s per cwt.; Dunlop, 56s to 62s.

Newport, Wednesday.—Quotations: Caerphillies, 56s to 62s per cwt.; fancy dairies, 63s to 65s; truckles, 56s to 63s; Derbys, 63s to 70s, and Cheddars, 60s to 63s. A fair supply and a moderate demand.

FRUIT AND VEGETABLES.

Covent Garden, Saturday.—Ample and varied supplies of fruit and vegetables on offer, trade being fairly good. Quotations of English produce:—Apples, 8s to 12s per bushel; cranberries, 12s to 15s; lemons, 9s to 20s per case; grapes, 8d to 4s; cobnuts, 6s to 7s 6d per 12lb; tomatoes, 3s to 5s per 12lb; sprue, 9s to 12s per dozen bundles; artichokes, 1s 6d to 2s per half sieve; beetroots, 2s to 2s 6d; Brussels sprouts, 1s 3d to 1s 6d per bushel; celery, 5s to 12s 6d per dozen rolls; cucumbers, 4s 6d to 7s; endve, 1s 3d to 1s 9d per dozen; horseradish, 8s 6d to 14s per dozen bundles; onions, 4s 6d to 6s per cwt; parsnips, 2s 6d to 3s; turnip tops, 1s 6d per bag; seakale, 9s to 12s per dozen punnets; forced rhubarb, 1s 6d to 2s per dozen bundles; leeks, 1s 6d to 2s; parsley, 1s 6d to 2s; carrots, 2s to 3s; turnips, 2s to 3s per dozen bunches; mushrooms, 8s to 12s per lb; potatoes, 55s to 85s per ton.

GAME AND POULTRY.

Smithfield, Saturday.—A fair demand met a moderate supply. Prices:—Pheasants, 4s to 4s 6d; young grouse, 4s 6d; old, 2s 6d; young partridges, 4s to 4s 6d; old, 2s per brace; English turkeys, 10d to 1s; French, 10d to 11d; Italian, 8d to 8½d per lb; ducks, 3s 3d to 4s; geese, 5s to 7s; Surrey fowls, 3s to 4s 6d; Essex fowls, 2s 9d to 3s 3d; Lincolnshire fowls, 2s 6d to 3s; Irish fowls, 2s to 2s 6d; wild ducks, 1s 9d; woodcock, 2s to 2s 6d; snipe, 8d to 10d; quails, 9d to 1s 4d; feathered pigeons, 7d to 9d; Bordeaux pigeons, 10d to 1s 2d; English hares, 3s 6d to 4s; leverets, 2s to 2s 6d; Scottish hares, 1s 6d to 1s 9d; tame rabbits, 1s 3d to 1s 9d; wild rabbits, 9d to 1s; live hens, 1s 9d to 2s 3d each; Australian rabbits, 5s 6d to 7s 6d per dozen.

POTATOES.

Borough, Saturday.—A slow demand prevailed for the good supplies on offer. Quotations:—Blacklands, 50s to 55s; best silts, 55s to 65s; Scotch, 55s to 65s per ton.

Goole, Wednesday.—Good attendance and plenty of potatoes. Prices range from 4s 6d to 6s per load. Retail prices unaltered.

Manchester, Saturday.—Potatoes: Yorkshire warps, 7s to 9s; sands, 6s to 7s; Cheshire, 4s 6d to 5s 6d; Irish, 2s 9d to 3s per cwt.

Southwark (Waterside), Saturday—During the past week the arrivals have been heavy, for which the demand has been slow, with prices in buyers' favour. The following are this day's quotations:—Scotch Up-to-dates, 50s to 65s; ditto British Queens, 50s to 65s; Lincoln Evergoods, 50s to 60s; ditto Up-to-dates, 60s to 70s; Blackland Up-to-dates, 50s to 55s; ditto British Queens, 50s to 55s; ditto Evergoods, 50s to 55s per ton. —R. G. BROWN.

Spitalfields, Saturday.—Light supplies were on offer, which were equal to demand. Royal Kidneys, 2s 6d to 2s 9d; British Queens, 2s 9d to 3s; Blacklands, 2s 6d to 2s 9d; Up-to-Dates, 3s to 3s 3d; Scotch Dates, 3s to 3s 3d; Queens, 2s 9d to 3s per cwt.

York, Saturday.—A good supply of potatoes, with a fair demand at late rates. Sands made up to 40s, and warps 45s to 59s per ton.

Barley at the Dublin Winter Show.

When we write that the total entries of barley at the recent winter show of the Royal Dublin Society amounted to no less than 300 of one sack each it will be seen at a glance what an important agricultural industry barley growing has become in the Sister Isle. The growth of barley in Ireland has several important factors favouring its cultivation. In the first place, it has very rich and suitable soil, it has a ready market close at hand from some of the largest distilleries and breweries in the world, and then, owing to the small proportion of tillage land to pasture in Ireland, a bulky crop of barley straw possesses considerable value. The greatest drawback to its cultivation in that country is its weeping climate, but in the case of most of the distilleries in Dublin bright colour of the grain is of less consequence than a good bold and plump sample, for the production of which the soil and other conditions are admirably suited. The season of 1905 must have been peculiarly suited to the cereal, as the great bulk of the 300 samples amply testify, as a bolder, better grown lot of barley would be difficult to find, and a large proportion is also of very good colour. The greatest fault to find was a want of more careful dressing, a great number of the samples having a good deal of horns still on the grain, whilst in some others a little more tail corn taken out would much have improved matters, and still other few lots were some seeds of weeds and occasionally a few wild oats, that detracted from the appearance somewhat. On the whole, however, the general display was most creditable and certainly one of the best that has ever been held since the institution of these classes. The way the entries are catalogued, too, is worthy of special comment, being deeply instructive to those who take an interest in growing barley, either at home or in Ireland; the variety of barley is given, time of sowing, time of harvesting, previous crop (for two years), manure used, kind of soil, upon which farm, and in some cases also width of drills, thickness of seeding ,and other details. The sum of £290 is presented by the Barley Committee to provide special prizes, to be given accoraing to an allotment scheme in the great barley-growing counties. In addition to the above sum of money, two champion prizes of £10 each are offered for the best narrow-eared and wide-eared varieties respectively.

The special prize for wide-eared barley was awarded to an entry rf Mr. M. Lawson, from Athy, Kildare. This was an excellent sample of barley, even, plump in berry, well shown, and of good colour. The following particulars are given as to its production: — Variety, "Standwell"; second year imported; manure used, farmyard; soil, yellow clay; previous crops, 1903 barley; 1904 turnips; sown March 5; width of drill, four inches; rate of seeding, 10 stones per statute acre; cut first week in August; threshed in October. The other special prize was awarded to a sample shown by Mr. John Keenan, from Queen's County; seed used, Scotch Chevalier (home grown); manure used, farmyard; soil, light loam over limestone gravel; two previous crops, 1903, barley, 1904 green crops; sown April 5; width of drill, six inches; rate of seeding, 9½ stone per statute acre; cut, August 14. This, too was a first-rate lot of barley, well dressed, in good condition, and an even sample of good body and colour. A few other prize-winning samples were a second prize to Mrs. Rice, in Co. Dublin; soil, lea; two previous crops, hay; sown, March 23; width of drill, two feet; split rate of seeding, 20 stones per statute acre; cut, August 5; yield per statute acre, 24 barrels. The yield of the previously mentioned crops was about ten barrels. Two first prizes in County Kildare were grown from Chevalier seed. In one instance the manure used was potassic superphosphate; previous crops, oats and turnips; sown, last week in March; width of drill, seven inches; rate of seeding, 9½ stones per statute acre; and yield, 10½ barrels.

In the other case no manure was used, the soil sandy, subsoil gravelly, two previous crops as in the last case; width of drill, six inches; rate of seeding, 15 stones per statute acre; yield, 15 barrels; time of sowing, April 15: and cutting, August 14. In County Carlow a first prize was awarded to a very bright and plump sample of Chevalier, shown by Mr. P. Kelly; the manure used, farmyard; soil, loamy; two previous crops, barley 1903, potatoes 1904; sown, March 29; width, five inches; rate of seeding, 14 stones per statute acre; cut, August 10; yield, 20 barrels. In County Wexford first prizes were won with good quality of Scotch, grown after oats and roots, sown in February and March. Very good bright barley also carried off the prizes in County Kilkenny, grown from farmyard manure, after oats and roots.

A first prize sample of excellent barley was grown in Queen's County from two cwt. compound bone manure on loam over limestone gravel; sown April 5th; previous crops, 1903 potatoes, 1904 barley, this following barley; the yield, too, was good, in this case 12⅓ barrels. A good crop of wide-eared barley won first prize in County Dublin from farmyard manure on sandy soil, sown March 5, at ten inches in drill, and 18 stones per statute acre, cut in August; this yielded 19 barrels; previous crops, oats and potatoes. The majority of the best samples and yields throughout were grown after roots, after oats apparently, the seeding time being most general, in March and April, and cutting at the beginning of August. There is great variation in the width of drilling, but, with the exception of the one lot mentioned earlier, grown upon two feet split ridges, the majority appear to be from four to six inches.

Mr. Lambert on Farm Colonies and Colonial Preference.

In the course of a speech made at the dinner held in connection with the Southmolton Road Christmas Show, Mr. G. Lambert, M.P., remarked that many persons believed that anybody could be a farmer. Let them try it; and if they did not find their mistake, then he was mistaken! To be a successful farmer, a man must be bred up to it. To dump a man with no previous experience down on a piece of land, and expect him to make that land pay was a delusionand a snare. And they were mistaken who thought it required no skill to perform the manual operations on a farm, as they might see by studying the varied duties of the farm labourer. A man had to be as skilful in the manual work on a farm as many men engaged in other trades and industries. He had been interested in reading the remedies proposed for the unemployed in the great cities. Some persons advocated farm colonies, and others small holdings. He wanted to know exactly what a farm col- was going to be. He did not think it possible to take the men who had been in the town for any considerable time, and think they could of themselves profitably cultivate the land. His own impression, as regarded the depopulation of the rural districts, was that they wanted, if possible, to keep the men from going into the towns. (Applause.) But if people meant by farm colonies places where men who could work and would not work should be made work, then he rather agreed with it. After mentioning other matters, Mr. Lambert touched upon the forthcoming General Election, and said they were told at the next election there would be a great cry of colonial preference. At present, many of the colonial farmers were in a much happier position than the British farmer, because this country had to support practically the whole burden of the army and the navy. The cost of the army and navy in this country was 52s. 6d. per head for every man, woman, and child; Australia only paid 5s. per head, and the Canadian farmer only 1s. 6d. per head. He did not believe the colonial farmer asked this country to penalise itself for the colonial, but that was the question to be decided at the next election. That was not a political gathering, and he would go no further into it, except to ask them to give their greatest possible attention to this most important question, and to be perfectly certain that they did not adopt a remedy which might be like going from the frying pan into the fire.

Potato Growers and Railway Rates.

The case of the National Federation of Fruit and Potato Traders' Association v. the Great Northern, the Great Eastern, and the Midland Railway Companies, came before the Railway Commission for judgment on the 5th inst. The applicants, who are potato growers and dealers in the Spalding district of Lincolnshire, where for the last 17 years a rebate of 2s. per ton on the carriage rate had been granted, complained of the withdrawal of the rebate, and asked the Commissioners to order the companies to grant a fair and reasonable rate, alleging that the revised rate of 9s. 2d. was neither fair nor reasonable. The defence was that the rebate allowed to the applicants amounted to an undue preference, and that the rate now in force was fair and reasonable.

Mr. Justice Bigham (President), in delivering judgment, said that it appeared that up to the year 1882 the carriage of potatoes from the Spalding district to London was performed by the Great Northern Railway alone, the charge being 9s. 2d. per ton for four-ton loads. Subsequently the Great Eastern Railway and the Midland Railway came into competition, and this led to the companies conveying the goods to the stations free of charge, this service being later commuted for a rebate of 2s. per ton from the original charge of 9s. 2d. per ton, the farmers and dealers performing the cartage service themselves. Before the beginning of the competition the evidence showed that there were no complaints on the part of the farmers and dealers that the conveyance rate was unreasonable. In 1903 the competition between the railways ceased, and the companies gave notice that they should revert to the old rate of 9s. 2d. for four-ton loads, and that the rebate would be discontinued. The railway companies, in defence of their action, said that the rebate amounted to an undue preference in favour of the farmers and dealers within the rebate area, and that they were anxious to perform their statutory duty of doing away with all unfair prejudice or preference.

Sir F. Peel and Mr. Gathorne Hardy concurred, and the application was accordingly dismissed.

Desist, I pray thee, unmannerly hog!

Dost think I know not of these Powders or that I should attempt to fat thee without their aid? No! no!! I wot too well their merit as a flesh producer, and as a preventative of the ills to which thy race is prone.

Live Stock Record.

SUCCESSFUL FLOCK-BREEDING.

Among the meetings of live stock societies held in London during Smithfield week, the annual meeting of the Hampshire Down Sheep-breeders' Association deserves special notice, if only for the admission in the report which was adopted that the past year has proved a highly prosperous one for those who keep that variety in every point of view. "The year 1905," states the report, "has proved

A view of Slough Market during the Sale of the King's Fat Stock

altogether a successful one for Hampshire Down breeders, the crop of lambs being better than in the preceding year, and prices for every class of sheep—whether rams, breeding ewes, stock ewes, tegs, wether lambs, or mutton sheep — have been maintained all through the year at a high level."

This is all the more gratifying, as the sheep alluded to are not only pedigree ones, but those of ordinary flocks also, and we may take it as a matter of certainty that in regard to the favourable season for lambing, and the remunerative market prices for sheep of every description, Hampshires are not alone in their glory, the experience being very general. Dr. Gillespie, at the dinner which followed the annual meeting, expressed a truism when he said: "While beef and some other things were at a very low ebb, the handling of sheep was proving, considering the whole circumstances of the time, satisfactory both in regard to wool and mutton." No doubt the advance in the rate of wool has had something to do with turning the attention of ordinary farmers more generally to shepherding, which a great many of them have been neglecting too much in the past two decades, as the agricultural returns fully show. The circumstance must be regarded as one of the most grievous misfortunes when sheep are neglected on the farm because of the high value of their manure when they feed off roots or green crop on arable land.

Mr. Prout, of Sawbridgeworth, in returning thanks for the Farmers' Club at the Agricultural dinner at the Trocadero, stated very truly that the laying down of too much land to grass tended to decrease agricultural wealth. The process by which this is arrived at is very intimately connected with the abandonment of shepherding. When the greater part of the land is converted to pasture it is far easier to turn to dairying than to keep up a flock of sheep, besides which there is rather a numerous class of farmers who used to follow the four-course system and grow turnips; and they were accustomed to buy in lambs in autumn to consume them and leave droppings to nurture the corn crop to follow. Those who had not large balances at their bankers threshed out their new crop of wheat soon after harvest that they might buy in sheep to consume their turnips in winter, and they were able to sell them again soon enough in spring to meet the Lady Day rent-call.

Sale of the King's Fat Stock at Slough: Selling the Pigs.

This is sometimes done now, but nothing like to the extent it used to be. In fact, the decrease of arable has always hitherto tended to the decline of sheep-keeping. There may be systems which it could be as fully sustained on pastures as well as on arable, as some aver, but they have never yet become popular. Perhaps if mutton and wool keep up their prices there will be a more general recourse to them.

STOCK AND SHOW NOTES.

By Herdsman.

In the course of a paper dealing with the breeding and feeding of cattle, read at the annual meeting and dinner of the Aberdeen-Angus, Mr. W. Reid remarked that if the Board of Agriculture would only grant £5,000 a year for ten years to buy fifty bull calves every year and present them to the poorest districts of Ireland, British feeders would soon be independent of Canada. By the spending of less than the price of a single torpedo-boat more would be done to provide food for Great Britain in time of war than could be done by half the fleet if it were engaged in escorting food supplies from America. These remarks, as may be imagined, met with cordial approval, but what a lot hangs on the little word if! At the same meeting Mr. W. S. Ferguson said the position of affairs in this country would never be satisfactory if they tried to introduce foreign cattle. He included Canadian cattle in that class. Personally he had been twice nearly ruined by the introduction of cattle disease from abroad. When disease came the feeders of cattle got compensation, but to the breeders of cattle, who had spent a lifetime in perfecting herds, the compensation meant only a trifle of the value of their animals, and these men were ruined.

The Leeds Smithfield Club have for many years past been striving to get an Agricultural Hall in the centre of the town for their excellent Christmas Fat Stock Show, and some remarks on the subject were made at last week's show by the Chairman of the Committee (Mr. C. Bettison). The Committee, he said, were as anxious as were the subscribers and the tradespeople of the city that the show should be held as near the centre of the city as possible, but for the present, at any rate, they would have to make the best of the building which the Corporation had allowed them to use. A scheme was being formulated to have a cattle market nearer the city, and they would then hope to have a permanent home near the present meat market. Under present conditions they had all their work cut out to provide the prizes and to give a splendid show, but there was no doubt that if they could have a per-

manent home they would get the best cattle in the country on exhibition. Some of the tradespeople were refraining from subscribing to the show, urging that the Smithfield Club were not endeavouring to attain that end. Such an idea was quite erroneous, and he would point out to them that unless they supported the Club and kept it going until that time came they would have to give up the show altogether. If once they gave it up they would never get the show back to Leeds, for other towns in the near vicinity would be only too glad to take it up. Mr. Bettison remarked upon the friendly terms which now existed between Leeds and York, and he also made the welcome announcement that arrangements had been made by the Committee by which, for the next ten years at any rate, Leeds and York would not clash.

The Stretford Horse and Horticultural Society's sixteenth annual show of horses, dogs, dairy cows, poultry, pigeons, rabbits, and cavies will be held on Whit Monday, June 4, 1906.

A town's meeting was held at Nuneaton, on Thursday, to consider the advisability of inviting the Warwickshire Agricultural Society to hold next year's exhibition at Nuneaton, where it was last held in 1897. Several well-known gentlemen promised financial support, whilst others would not subscribe, being of the opinion that there would be no advantage in holding the show in the town. Eventually, however, it was decided by 25 votes to 1 to invite the Society, and thus the Warwickshire Agricultural Society has come to the end of their troubles over a site for their 1906 show.

Contagious Diseases of Animals.

Summary of Returns issued by the Board of Agriculture for the week ending Dec. 9, 1905 :—

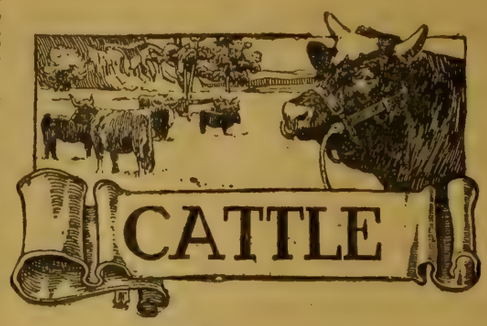
NOTE.—The figures for the current year are approximate only.

An appointment as inspector under the Board of Agriculture has been given to Mr. Ian Robertson, son of the late Mr. John Robertson, for many years factor and chamberlain to the Duke of Atholl. Mr. Robertson, until his father's death about two years ago, assisted him at Balmacneil Farm, near Ballinluig, which Mr. Robertson tenanted after his retirement. Recently Mr. Robertson was an inspector under the Perthshire local authority in the carrying out of the Sheep Scab Order.

The Paris "Matin" announces that, starting from the principle laid down by Professor Behring regarding the discovery of a bovine vaccine against tuberculosis, Dr. Roux and Professor Vallé have found a vaccine against bovine tuberculosis, composed of tuberculosis bacilli from horses, while that of Professor Behring was composed of human bacilli. This new vaccine, it is believed, will have the double advantage of being easy to manipulate and not dangerous, for the tuberculosis of horses is not communicable to man.



Notes and Jottings.

The block test for cattle at the Smithfield Show, established a few years ago, appears to attract a few entries and to create a fair amount of interest, though, really, there does not appear to be any great amount of valuable information attaching to it. The breeding of the various lots is given, it is true, but nothing whatever is said as to the feeding. This latter ought by all means to be included in the particulars that the catalogue affords concerning its entries, so that it might be ascertained which kind and system of feeding tended most to flesh, and which to fat only. Then the weights of the majority of the stock are decidedly on the light side, and savour more of the character of ordinary market cattle rather than those specially fattened for Christmas.

The total entry this year numbered twenty-two in the three classes: steers under two years old, steers above two and not exceeding three years of age, and heifers not exceeding three years. The classes were open to any breed or cross, it appears, and were patronised by many varieties. But of the twenty-two entries, eight were of the Aberdeen-Angus or its crosses, four were of Galloway cross, and the remainder chiefly purely bred Welsh, Sussex, or Red Polled. The champion prize carcase proved to be a heifer of Mr. J. Douglas Fletcher's, whose weight for age was exceedingly good, being 101 st. 4 lb. at a year and nine months old, her live weight 11 cwt. 15 lb., so that she dressed very well indeed. The quantity of internal fat and suet, however, must be considered rather small for such good feeding as her weight for age indicates.

This heifer was bred by exhibitor and sired by the Aberdeen-Angus bull, Juba 3rd of Craighead, out of the Shorthorn cow, Kirklevington Duchess, whose sire was Duke of Brailes 14th, both the latter of milk breeding to a considerable extent, which doubtless assisted with the flesh on the carcase and kept down the fat. The hide was 78 lb., which for a heifer of a year and nine months is quite on the heavy side. In addition to the champion prize, the heifer was also first in her class, and also adjudged first when alive, which is altogether satisfactory. The second prize in this (the heifer) class was awarded to the carcase of a Kerry and Angus cross, shown by the Duchess of Newcastle, two years and two months old, and, though of a smaller cross, the carcase weighed 94 stone, the hide 1 lb. less, and suet a trifle more.

The third and fourth prizes in this heifer class were accorded to a Red Poll of Sir Walter Corbett's, with 92 st. 7 lb. of carcase and 65 lb. hide at two years and a month old; and to a Welsh heifer of Mr. R. M. Greaves just upon three years old, whose dead weight was 110 st. and hide 87 lb. It is astonishing how well the Welsh breed come out in these competitions. In addition to the fourth prize awarded as above, both first prizes in the steer classes were awarded to this breed; that in the over two and under three years old class also being awarded the reserve champion. This was a steer of Mr. Robert Hughes, just upon the three years old, whose live weight was 13 cwt. 14 lb., and dead weight 119 st.; he had the most suet of anything in the class, and his hide was 114 lb.

The second prize in this aged steer class went to an Angus and Shorthorn cross of Mr. J. G. Young's, of two years and ten months; his live weight was 13 cwt. 2 lb., being 12 lb. lighter than the Welsh steer, whilst his dead weight was three stones lighter, suet 2 lb. lighter, and hide 17 lb. lighter. It is rather a singular coincidence that the third and fourth prizes in this class were awarded to the lightest and heaviest beasts in the class respectively, so that it appears size did not tell at all in the results of the carcase judging, by which it is intended to convey the meaning that the heaviest beast cut up pretty well as satisfactorily as the lightest, and as the difference in these two carcases was 79 st. 3 lb. and 131 st. 7 lb., it leaves rather a wide margin to allow for variation in quality. The live weight of the one was 9 cwt., and of the other 14 cwt. 3 qr. 4 lb., the hides being 65 lb. and 104 lb.

Coming to the junior steers under two years old, as intimated in a previous note, the first prize again went to a Welsh carcase, shown by Mr. R. M. Greaves. The steer was only just under two years old, and weighed, alive, 12 cwt. 2 lb., and carcase 199 st. 1 lb., and the hide 92 lb. The second prize in this class was allotted to a Galloway and Shorthori cross of Sir Oswald Mosley's, the live weight in this instance being 11 cwt. 2 qr. 14 lb., carcase 104 st. 3 lb., suet exactly the same as the first-prize one, and hide 2 lb. lighter. Both third and fourth prizes were won by Angus and Shorthorn crosses of Mr. Young's, 10 cwt. 2 qr. 24 lb. and 10 cwt. 3 qr. alive, and 98 st. 4 lb. and 93 st. 5 lb. dead, respectively. The difference in live and dead weights of these two is very striking, and affords considerable food for conjecture.

There was but 4 lb. difference in the weight of the two animals alive, yet when dressed the lighter beast of the two when alive was 5 stones all but a pound the heaviest when dressed, and there was only two pounds difference in the weight of the hides. Six weeks difference in the age of the animals may account for some of this difference, the lighter weighing steer dead being that much younger than his heavier companion. In breeding, both were sired by a Shorthorn bull, though not the same bull, and the dam of the heavier weighing steer dead was Shorthorn and Angus cross, whilst the dam of the lighter steer was a pure Angus. The extra cross of Shorthorn blood might, too, have its influence over the weight of the heavier one by giving more muscle and solidity to the carcase.

Such differences as the above in the live and dead weight of two animals that have apparently been fed by the same hands and in the same manner leads one to wonder whether the live weight is to be trusted very implicitly; it would be interesting to know if the judges noted any want of finish in the handling of the lighter beast. In their awards alive it was placed behind the heavier one, but no other remarks are set down. As regards districts whence the winning animals in this competition hailed, four were fed in Scotland, including the champion, four were fed in Wales and of pure Welsh blood, and included the usual champion, and four were fed in England. The only four Welsh cattle exhibited in this section thus secured two first and two fourth prizes, as well as the usual for the championship.

It has not been a frequent occurrence of late for us to have to report sales of Aberdeen-Angus cattle for export, so that it is the more gratifying to learn that Mr. W. B. Greenfield, of Haynes Park, Bedford, has sold two promising two-year-old bulls for export to the Argentine. Both are the get of the wellbred and capital sire Just Rover of Morlich, and have been very successful at several shows this or last year. Foreign buyers, it is reported, are much keener upon English-bred Angus cattle than they were at one time, the reason assigned being the English-bred ones from the milder climate enabling them to be kept almost entirely in the open air, and give greater satisfaction when transferred across the water.

Aberdeen-Angus breeders will have many friends to back them up, if they will adhere to the policy laid down by Mr. Ferguson at the annual club dinner this year in London, when, after listening to Mr. Reid's admirable paper on the breeding and feeding of cattle, he said that the great backbone of this country was breeding their own stock; and, as he very truly remarked, where had they ever, in the course of their experience, seen cheaper store cattle than at the present moment. The present price of stores is certainly leaving the breeder nothing for his trouble; then, if the present low price is to be still further lowered by the admission of Canadian stores, surely it will be about like driving the last nail into the coffin of English stock farming.

There is one point, however, in Mr. Reid's paper that requires considering very deeply before being accepted in its entirety. We allude to the paragraph in which he recommends the purchase by the Government of a large number of their best bull calves for use in Ireland each year, as being an excellent plan to adopt, and likely to aid much in furnishing us with a better supply of store cattle. It is needless, perhaps, here to add that there are two kinds of store cattle always needed—one class for making dairy cattle of, and one class for feeding. Latterly a very large portion of the milking cow supply in this country has been obtained by the purchase of Shorthorn heifers and drapes from Ireland, and these pay the producer (as prices go nowadays) far better

Whether it is desired, however, to breed cattle for dairy purposes or for feeding, Mr. Reid's, as well as the remarks made by other speakers, were very true, and ought to be very deeply impressed upon all breeders of cattle in every country—namely, to breed the best, or, rather, to try and do so, by using the best sires upon as good dams as circumstances will admit, and when cross-breeding is the object in view, to see that both parents are pedigree-bred. Attention to this very important point will just make all the difference to profit and loss, as well as to the more certain quality of the offspring, which, in other words, means profit.

Thame Christmas Fat Stock Show and Sale.

The annual Christmas Fat Stock Show and Sale at Thame took place on Tuesday, and fully kept up the old reputation which it has now held for many years, of being the largest and best attended market in the district. Agriculturists from all parts were present, and there was a very large attendance of buyers, many coming from long distances.

The entries for the show were again excellent and slightly larger than last week, and the quality of the animals shown were particularly good; in fact, there has not been such a strong class of crossbred bullocks for many years, the champion beast winning the prize being a grand crossbred Hereford, bred and exhibited by Mr. F. Chowns. The second prize in the class and also reserve champion was a very fine Hereford of great size and quality, exhibited by Mr. Henry Fuller, and was sold for the very high price of £47, which has not been approached for many years. The remaining classes for cattle were: First prize, won by the Earl of Macclesfield's trustees for a Shorthorn ox; Mr. W. Way, with two exceptionally good Shorthorn cows; and Mrs. Jessop, for a very choice Shorthorn heifer.

The sheep were exceptionally good, and received more entries than in previous years, the principal winners being Messrs. Andrews, Henry Reynolds, and Milton Harris.

The pig classes were again well filled, and some very fine animals were shown.

In the market Messrs. Bond and Burrows had 288 beasts, selling all the exhibted and prize animals. The quality of the cattle was excellent; a brisk demand ruled througohut. Best beef realised 4s .4d. to 5s. 2d. per stone. Mr. Burrows commenced selling punctually at 11.30, and it was evident, as the sale advanced, trade improved, the last 150 beasts selling better than any. The auctioneer did not finish until 5.20, having actually sold 250 beasts.

Basingstoke Christmas Fat Stock Sale.

Messrs. Raynbird and Sons held their 33rd annual sale of prime Christmas fat stock on Wednesday, when their sale yard immediately adjoining the stations of the L. and S.W. and G.W. Railways at Basingstoke was filled with a very excellent show of prime quality fat beasts, fat calves, fat sheep and lambs, and fat pigs, which attracted the attendance of a very numerous and influential body of agriculturists and buyers from all parts. The show consisted of 183 fat beasts, 626 fat sheep and lambs, 35 fat calves, 299 fat pigs, and 153 head of poultry consigned by over 120 feeders, chiefly from the locality and the west of England. These were exhibited to the best advantage, the pens and sale rings being well arranged for convenience and for the quick despatch of business, the sale yard and auction mart has the very great advantage of unrivalled railway facilities.

A feature of the sale was the good show of well-bred cattle from some of the best graziers in the country, several of the exhibits being prize-winners at Christmas shows; upwards of one hundred head of choice Devon cattle selected from the best herds and shows of North Devon and Somerset entered the sale ring, and nearly all were sold. Fat beasts of Christmas quality found ready buyers, as usual the choice beasts of moderate weight making from £20 to £25 had the best of the trade. Inferior and rough cattle were saleable, but at prices comparatively lower than the best.

Amongst the noteworthy lots to enter the sale ring may be mentioned Lots 1 to 25, well-bred Devons from W. Thay, the best making £21 to £26; smaller up to £20. A few good Devons were sold by W. Filmore up to £22 10s., the four two-year-old polled steers, grass and cake-fed, from Wolverton Park, made from £18 5s. to £20 10s. Twenty-nine very choice Devon steers from J. B. Dennis sold readily at from £21 to £26 10s.

A prime fat bull from W. Allen was sold at £20. Lot 43, a young Galloway steer from the Rev. Canon Theobald, £18; a shorthorn bull from W. J. Trearson £18 10s.; Lot 46, an excellent shorthorn beast from G. Laing, Esq., £28; Lot 48, a shorthorn heifer from J. Nicoll, Esq., £22 10s.; W. G. Pench sold Devons up to £22 5s., and shorthorns £19; W. Randall's useful shorthorns made up to £20 10s.; Lots 119 to 139 were filled with the superior Devons from W. A. Ashford, which were cleared at from £19 5s. to £26 15s.; W. R. May's young Devons made up to £19; £20 was given for the good shorthorn bull from the Preston House Estate; shorthorn steers from W. G. Oldershaw sold up to £20.

The selection of fat sheep was excellent as regards quality and good as to numbers, consisting mainly of ripe meat-weights of the Hampshire down breed, a good all-round demand was experienced, and with a fair trade, a clearance was quickly made, a few lots being reserved at prices beyond the buyers' ideas of value. Prime South Down lambs from the Dognastield Estate made 49s. 6d. Mr. F. W. Evans selling at 39s., Mr. G. H. King 37s., Mr. C. Harnett 35s. Prime wether tegs were sold by F. H. T. Anvorsi, Esq., at 69s.; Mr. Honey, 62s. 6d; Mr. S. Suten, 59s.; Mr. H. Barton, 58s.; Mr. J. T. Frearson, 55s.; Mr. W. Bowden, 54s.; Sir R. Rycroft, Bart., 54s.; S. Hatton, Esq., 53s.; Mr. J. W. Hooper, 52s. 6d.; H. Harris, Esq., 51s.; Mr. W. Allen, 50s. 6d.; fat ewes by Mr. W. H. Horlock, 47s. to 55s.; Mr. W. N. Butler, 43s. 6d. to 45s. 6d.

There was a fine show of fat pigs, and throughout the sale a very brisk trade may be reported, choice porker pigs selling exceedingly well. Fat hogs had a very good trade. There was a large entry of prime fat sows, which were cleared at high prices. Fat hogs were sold for Mr. C. Harnett at £5 10s.; Mr. W. Street, £5; Mr. A. C. Butler, 99s.; Mr. Earnaker, 98s.; Mr. H. E. Sharp, 97s.; Mr. E. Bayliss, 90s. Fat sows realised £5 5s. to £8 12s. 6d.

Fat calves were a short entry, and for good quality calves a ready sale was made, Mr. R. Webb selling at £6; Mr. W. Allen, £5 5s.; Miss Neate, 97s 6d., etc., etc.

Ruling values :—Prime Devon and Scotch beasts, 7d. to 7½d. per lb.; ditto shorthorn ditto, 6½d. to 7d. per lb.; bulls, cows, and inferior beasts, 5d. to 6d. per lb.; best quality fat sheep, 8½d. to 9d.; secondary do., 7½d. to 8d. per lb.; fat hogs, 9s. to 10s. 6d.; porkers, 10s. 6d. to 11s. 6d.; fat sows, 8s. to 8s. 6d. per score.

The buyers, upwards of 75, included representatives from Basingstoke, Reading, Guildford, Farnboro', Hartley Row, Odiham, Aldershot, Camberley, Croydon, London, Surbiton, Walton, Woking, Fleet, Mortimer, Overton, Andover, Shenfield, Whitchurch, Salisbury, Winchester, Kingsclere, Preston, Caudover, Micheldever, Gosport, Portsmouth, Southsea, Alloa, Eastleigh, Weybridge, Uxbridge, Kingston, etc., etc.

Gloucester Christmas Sale.

The Great Christmas Market at Gloucester was held on Monday, in bright, frosty weather, and, as usual in the case of this most important fixture, there was a large attendance of buyers of fat stock from various parts of the country. A large entry of excellent stock had been secured for each sale ring, and the attractive prize fund which had been contributed produced keen competition in most departments of the market. Messrs. Bruton, Knowles and Co. had a first-class entry, which comprised over 350 bullocks, heifers and cows, 17 heavy bulls, 800 sheep, 120 calves, and 750 bacon pigs and porkers, the vendors including well-known breeders and feeders of stock. As usual, Messrs. Bruton Knowles and Co. contribute a goodly sum, £52 10s., to the prize fund, the value of which amounted to £84. Mr. James Peter, of the Berkeley Castle Estate Office, was to have judged the sheep and calves, but he was unable to attend in consequence of ill-health, and his son, Mr. J. A. Peter, and Mr. T. Webb, of Ross, officiated in his place. Messrs. Webb and Peter also judged the sheep; and Mr. G. Samworth, Birmingham, the pigs. The awards were as follows :—

CATTLE.—Fat Bull: 1, Mr. Lawford Pullin; 2, Mr. R. Stratton; 3, Messrs. J. and E. S. Vines; r., Mr. Joseph Wherrett. Five fat heifers: 1, Mrs. Vines; 2, Mr. W. H. Butt; r., Mr. George Chandler. Five fat steers: 1, Mr. John Cave; 2, Mr. J. P. Terry; r., Mr. S. Phelps. Pair of fat heifers: 1, Mrs. Vines; 2, Mr. J. G. Rymer; r., Mr. George Vines. Pair of fat steers: 1, Mr. S. Phelps; 2, Mr. J. Cave; r., Mr. J. P. Terry. Fat cow: 1, The Executors of the late Mr. Peter Stubs; 2, Mr. James Horlick; r., Mr. George Vines. Best fat beast in the sale: 1, Mr. S. Phelps; r., Mr. J. Cave.

SPECIAL PRIZES.—Best fat beast in the market (open to any sale ring): 1, Mr. S. Phelps.

SHEEP.—Ten fat sheep, lambed in 1905: 1, Mr. James Horlick; 2, Mr. C. W. Curtis. Ten fat sheep, lambed in 1904: 1, Mr. E. Harvey; 2, Mr. James Pearce. Ten fat ewes: 1, Mr. L. J. Smith.

PIGS.—Five bacon pigs: 1, Mr. C. R. Rickards; 2, Mr. W. F. Jordan; 3, Mr. C. R. Rickards; r., Mr. W. Summers. Five porkers: 1, Mr. C. R. Rickards; 2, Mr. P. A. Colebatch; 3, Mr. G. E. Fowler; r., Messrs. J. and E. S. Vines. Fat sow: 1, Mr. W. Summers; 2, Mr. W. Archer.

CALVES.—Fat calf: 1, Mr. J. Pearce; 2, Mr. W. Littleton; 3, Mr. P. Wheeler.

Mr. H. W. Bruton conducted the sale, which, taken as a whole, was a satisfactory one.

Mr. Lawford Pullin's prize bull was sold for £24 10s., to Mr. Poole, Newport, who gave £22 for Mr. Stratton's second prize bull, and £22 10s. for Messrs. J. and E. S. Vines' third prize winner. The reserve bull went to Mr. Hawkins, Pontypridd, for £24; other bulls sold up to £25. In submitting the two pure-bred steers of the Old Gloucester breed, consigned by the Duke of Beaufort, Mr. Bruton remarked upon the interesting character of the lots, the cattle being of the oldest breed in the kingdom, with the exception of the Chillingworth, which, as is well known, are wild cattle. One of the steers was knocked down to Mr. Walter Warner, Gloucester, for £26; and the other to Messrs. Holliday, Cheltenham, for £24. The bullock of Mr. Samuel Phelps, Churcham, which won the champion prize for the best fat beast in the market, was purchased by Mr. Greenwood, Gloucester, for £30 15s. This price was surpassed by another bullock of Mr. Phelps', which sold at £31 15s., Mr. Clarke, Bredon, being the buyer. These prices were by far the highest realised in the market. Numerous other lots of bullocks, heifers, etc., of various ages were disposed of at good prices.

With regard to the sheep, amongst the prize-winners wethers from Mr. James Horlick made up to 68s. (Mr. Hawker, Dursley), others selling at 67s. (Mr. Trownsell, Chalford) and 65s. (Mr. Windo, Gloucester). Mr. C. W. Curtis' tegs made up to 60s. (Mr. E. Taylor, Gloucester); and Mr. E. Harvey's tegs also up to 60s. (Messrs. Chamberlayne and Co.); a similar price being realised by tegs consigned by Mr. James Pearce, the purchaser in the latter case being Mr. Sidney Davies, Bristol. Mr. Smith also gave 52s. for ewes from Mr. L. J. Smith, The Scarr, Newent. Amongst the sheep not shown for competition Mr. E. Harvey's made up to 66s. (Mr. Young, Bath); and Mr. James Pearce's, 61s. 6d. (Dr. Etlinger, The Cotswold Sanatorium, Cranham).

Some noteworthy prices were realised in the pig market. The first prize pen of five bacons, owned by Mr. C. R. Rickards, Haresfield, was purchased by Mr. Ashcroft, Cheltenham, at 100s. apiece; Mr. W. F. Jordan's, Taynton, second prize pen was secured by the Gloucester Co-operative Society at 108s. apiece; and Mr. Rickards' third prize winners went to Mr. W. Summers, Standish, at 97s. each. Of the prize porkers, Mr. Rickards' winners sold at 58s. apiece, to Mr Wall, Downend, Bristol; Mr. P. A. Colebatch's second prize porks at 50s. each, to Mr. Docker, Cardiff; and Mr. G. E. Fowler's Apperley, third prize winners, at 50s. 6d. apiece (Mr. Docker). The best fat sow, consigned by Mr. W. Summers, Standish, was sold to Mr. Docker for £14 7s. 6d.; the second prize winner (Mr. W. Archer's) was bought by Mr. G. Samworth, Birmingham (the judge) for £12; while the highly commended—the heaviest pig in the market, weighing 6 cwt. 3 qrs. 4 lbs.—owned by Messrs. J. Grose and Sons, Quedgeley, realised £13, Mr. Docker being the buyer.

Mr. James Pearce's first prize calf was sold for £6 10s. to Mr. Wall; Mr. W. Littleton's second prize winner for £4 19s. to Messrs. Waghorne Bros.; and Mr. P. Wheeler's third prize calf to Mr. F. Windo, Gloucester, for £4 16s.

Difficulties in Importing Stock into France.

The Board of Agriculture and Fisheries have been informed that difficulties have arisen at some of the French Channel ports owing to the fact that the formalities prescribed by the Decree of the 11th June, 1905, with regard to the importation into France of horses and other animals have not been complied with in Great Britain.

The Board desire, therefore, to bring to the notice of all persons exporting horses, asses, cattle, sheep, goats, and pigs to France that the landing can only take place through certain specified Customs-houses.

The stock must be accompanied by a certificate of origin from the administrative authority of the place from which they come, certifying that no contagious disease affecting animals of the species in question exists or has existed in that place during the preceding six weeks. The certificate must state the number and description of the animals, and should not have been issued more than three days before the dispatch of the animals. Animals not accompanied by such a certificate or which are not presented with as little delay as possible after the expiration of the voyage will be rejected. Cattle presented for importation into France will be submitted to the tuberculin test, and for this purpose are to be kept under observation, at the expense of the importers, for forty-eight hours at the least.

Fuller particulars were published in the "Journal of the Board of Agriculture" for August, 1905.

Horse Notes.

He doth nothing but talk of his horse.
—Merchant of Venice.

"He doth nothing but talk of his horse." as he appears in fiction, and pointed out that his powers of endurance, or if it chanced, for the purposes of the story, that a wild and vicious horse is needed, his vice is, in one word, "impossible." Why this should be I cannot for the life of me make out. One can understand the impossible jumps which lady novelists make their heroes take, if they chance to write of hunting, for lady novelists, as a rule, know nothing whatever of sport or of horses, and, when they write about either, made sad examples of themselves—as, for instance, the steeplechase described by Ouida. But when men who do know, or who should know, something about horses write these impossible stories about them one can only wonder.

The latest instance of gross exaggeration at the expense of "that noble animal, the friend of man," comes from the pen of Sir A. Conan Doyle, and I should have never noticed it had not Sir A. Conan Doyle shown on many previous occasions that he does know something about horses. One never takes any notice of Dumas making a horse or horses cover impossible distances of ground in a short time. Dumas is superior to time and space, and if the exigencies of his story require that a man shall be in London at ten o'clock and at York at eleven, why at London and York he will be when he is wanted, and one does not inquire too closely how he gets there.

Dumas, however, does not enter into minute descriptions about his horses; and, if he did, we should not care much, knowing his ignorance. But from Sir A. Conan Doyle we expect better things. And this is what we get! In his latest novel "The yellow horse of Crooksbury," we are told, was by a Spanish Destrier from an Arab mare of the same breed that had carried Saladin. And then he proceeds to describe him as a light chestnut, 17 hands high!! In the days of which he was writing—the days of Edward III.—England, nay, Europe, could have been searched and searched in vain for a horse 16 hands high, let alone 17. Fourteen hands and a half was the usual size of the light horse for many a year after that, and the heavy, clumsy war-horse that struggled along at a slow pace under the burthen of some 30 stone was not a tall horse, as we know tall horses in these days, and was probably under rather than over 15 hands 3 inches in height.

As for the vagaries of the horse in question—even if he could have done what is described—no man could have ridden him and conquered him without saddle or bridle. Indeed, no man could have beaten him by main force, as Sir A. Conan Doyle makes his hero do. There does not appear to be the least reason for such exaggeration, and it is certainly strange that a man, who would never think of, say, making a train travel at the rate of 200 miles per hour, thinks nothing of making a horse do quite as wonderful a thing, the relative powers of the two being taken into consideration.

The December sales have been the subject of conversation all over the country, and even the most sanguine of the vendors could scarcely have expected to realise such prices as they did. This is surely a curious commentary on the cry of the pessimists that our thoroughbred horses are a decadent race. We hear, day after day, that we are going back as a horse-breeding nation; day after day we are told with painful repetition, of the skill of our foreign neighbours—Germany, France, Italy, America are countries whose example is quoted. The skill and intelligence of foreign breeders is flung with scorn in the teeth of us poor benighted islanders. And what is the result? The foreign breeders come to our markets and outbid us for the best, and take them out of the country. Given the intelligence and skill of the foreigner in matters appertaining to horses and horse breeding, and, if one will, cheerfully acknowledge the skill and judgment of the foreign buyer, it strikes me as not very likely that he would come here and pay thousands for brood mares and stallions if he had as good or better at home.

And one very important factor is not to be overlooked. This scouring of England for high-class stallions and mares has been going on for some hundreds of years, for there were stringent laws against the export of horses long before there was any record of the sales of horses for abroad. But records do exist for upwards of a hundred years, and yet we find that, although the foreign trade has increased by leaps and by bounds, and in spite of the many good horses and mares which we have sold to our foreign friends, we have still managed to do more than hold our own and keep "the top of the market."

This does not imply that we are doing as much as is necessary to hold our position. That we are lax enough in many important matters is but too evident from the very sales which I am discussing. The foreign breeders, knowing what they want, go on bidding, and the English breeders, many of them as wealthy men as their rivals, stop bidding and marvel at the prices made. And the consequence is that we lose horses we can ill afford to lose. In this instance I am not referring to Diamond Jubilee. There is so much of the blood in the country that he will not be badly missed, and, in some respects, his expatriation will be a benefit, for there will be less opportunity of that inbreeding in one line which is so injurious to the breed as a whole. But it was different with Flying Fox, who was a direct descendant of the famous Agnes in the best line; and it was different with many of the mares which were sold at the December sales. They should never have left the country.

The same remarks apply with equal force to other breeds as well as the thoroughbred, but with the latter the prices rule so large that they serve better to point a moral than horses which do not command such a big figure. What the country has lost through the way in which Cleveland Bays have been sent abroad at, in many cases, sadly below their value, it would be impossible to say. I remember once talking to a very wealthy man about a horse of the breed that had been exported, and I told him that he was just the horse that was wanted to help the breed at the time, and this loss was a serious one. His reply was that it would be a good thing to revive the old laws forbidding the export of horses, or else putting on a heavy export duty. I pointed out to him that he had the best means of keeping the horses in the country in his own pocket; but I could not convince him. Yet considerably under £500 would have kept that horse in the country.

The danger is that we take our position too much for granted. People who are not horse-breeders have little or no interest in horses, until some fine day we are beaten at our own game—as why should we not be—and then there is a great outcry that breeders have not done their duty, they have not gone in for this or they have gone in for the other. It is quite on the cards that some day we shall find a horse that has been bred abroad the champion at the Shire Horse Show or the Hackney Horse Show. And would it be wondered at. The foreigners have been buying our best for years; they have been breeding intelligently for years, and if they had their reward in this way one should not grudge them their victory, or join in the outcry which there would arise from ignorant scribes and ignorant critics about the decline of English horse-breeding, the first thing I should recognise would be that our foreign friends had pluckily come to where they could meet the best in the world.

Perhaps I may be permitted to relate a personal experience. Many years ago I was staying with a friend who exported horses largely, and I may say that he was one of the shrewdest judges of a horse it was ever my lot to see. A Yorkshire man, too, and with a keen sense of humour. My friend was expecting a large foreign buyer the next day, and he suggested a walk around the boxes. One useful horse after another was inspected, and at last we came to a remarkably fine colt. He was duly examined and admired, and then his owner said, "Aye—that will do, Jim—you can put him in the barn end." We continued our inspection, and some five or six more were consigned to the barn end. Then we came to one which caused considerable thought, but at last his owner said, "He can stop where he is, Jim."

Next morning the foreign buyer arrived—a shrewd man, and a good judge, and I accompanied my friend and him on the tour of inspection. The buyer said but little, but it was easy to see that he knew his business. When he had gone through all but those in the "barn end," my friend said, "Now you've seen what I have to sell." "Is that the lot?" asked the buyer, a question to which he did not get a direct negative or affirmative. Finally he bought eight very good young horses. And when he went away my friend said, "If he had seen the barn end lot he would have bought nothing else, and they are too good to leave England yet awhile."

Now with the wealth there is in the country, why do not some of those who take an interest in horse-breeding establish a "barn end." My friend recognised the value of blood, and would not part with it till there was more of it coming in in the same line. Yet dealing was his business, and no one could have blamed him for taking the ready profit and minimising his risk. But what shall we say about the wealthy men to whom a few thousands are as nothing, who, time after time, let the foreigners take the best in the market? Can it be that, in the craze for many excitements, we are ceasing to be a nation of horsemen?

THE LOOKER ON.

THE TENS OF THOUSANDS of users of MOLASSINE MEAL should see that their stock have a portion in every feed all the year round, not simply as a condiment when an animal is out of condition, or occasionally as a fillip. MOLASSINE MEAL is the most valuable and economical food, displacing all condiments, and should be given in place of the same weight of oats, beans, grain, cake, or other feeding stuffs. Manufactured by HENRY TATE AND SONS, LTD., Sugar Refiners, London and Liverpool. Sold by all Grain and Forage Merchants and the MOLASSINE CO., LTD., 36, Mark Lane, London, E.C.; 125, Hope Street, Glasgow; and 45, Dame Street, Dublin.—[ADVT.]

Notes and Jottings.

The value of the cross-bred sheep for mutton purposes has probably never been better demonstrated than in the recent carcase test classes at Smithfield Show. To the casual observer it is probable that this remark may be open to question, but it is not so, the reason being that the carcase section of Smithfield Show this year had for the first time classes for cross-bred lambs and wethers.

This separation of the cross-bred carcases from those of the different pure breeds is an excellent arrangement. It is now possible for those who care to take the trouble to thoroughly compare the result of the mating of any two pure breeds with that given by any other combination of pure breeds of different breeds. The importance of this comparison lies in the fact not only that it can be made in connection with flesh, but also in regard to the conformation of the carcase. The latter is an all-important point in assessing the value to the butcher. It is true that there is no material digerence made in the retail price of a well-formed carcase in comparison with an ill-formed one. But the former has this in its favour, namely, it is available for the first-class trade, and the latter largely, if not entirely, has to go to supply the wants of those who are not so particular as to the appearance of the joint.

One of the best-formed pens of cross-bred lambs that have come to our notice at the fat stock shows this season was a pen that only took second prize at the Ashford Show. It was the produce of the Southdown ram mated with Kent or Romney Marsh ewes. A neater pen, with better backs, loins, and legs would be difficult to find.

This is one of those crosses that are uncommon, but from the result given by this pen and one of almost similar description of the same cross exhibited some five or six years back by one of the leading Southdown breeders in Kent, it is evident that the cross is one that deserves far more attention than it has hitherto received. An instance has just been brought to our notice that shows the increased care that importers of British sheep in the Argentine are taking in reference to the breeding and pedigree of the sheep they import.

Without mentioning either the breed or the parties concerned, the case before us is as follows:—"A," a buyer of English stud sheep for the Argentine, purchased from "B," the breeder,

the understanding that every endeavour should of their breed here, and received with them individual export certificates. For some reason or other "A" neglected to have, at any rate, one of these export certificates stamped at the Argentine Consulate here previously to shipment. On arrival in the Argentine "A" sold these sheep by auction, and one of them was purchased for stud purposes by "C," who, being a breeder of stud sheep of the breed, applied to have his ram recorded in the Argentine Flock Book, and his application was refused because the export certificate had not been stamped by the Argentine Consul here. The export certificate in question has now been returned here for this purpose. This fact indicates that there is need for all concerned in such transactions to see that all the requirements of the Argentine Government and Flock Book are carried out, for nothing will be found more detrimental to business than for the Argentine purchaser to be put to the unnecessary trouble and expense the breeder indicated by the letter "C" has been in the case referred to above.

Stud sheep breeders will be able to look back upon the recorded results of the export demand for their sheep in November, 1905, with the greatest satisfaction. It is true that the number exported was not a record one, for in November, 1897, it is found that 1,443 head were shipped, but the average declared value of these was only £10 3s. 3d. per head. Last month's results are by far more satisfactory taken as a whole, for, although the number exported was but 1,067 head, the average declared value of them is given in the Trade and Navigation Returns as being £18 5s. 10d. per head.

Looking back at the records for previous years we find that the increased demand during the past month took 72.34 per cent. more than in November, 1904, and that the average of declared value of the larger number exported was £18 5s. 10d., as against £12 15s. 9d.—a notable and very material increase.

It is generally agreed that the prices of live mutton in our markets is very satisfactory. This result has, doubtless, been helped very materially by the notably small supply of imported live sheep received during the same period, namely, 5,129 head, the smallest total imported during the month of November for very many years.

On the other hand, the supplies of imported mutton received during November have never been larger than was the case during the month just concluded. Taking the totals given in the official returns, we find that the aggregate profit of imported mutton received during November last was 318,793 cwt., or 8,047 cwt. more than the highest total imports for this same month previously recorded. The declared value of the live sheep and mutton imported last month amounts to £584,344, or 6.69 per cent. more than in November, 1904.

There were thirteen new members added to the Kent or Romney Marsh Society at its last meeting, owning just over 3,600 sheep, a notable accession of membership, and one that shows that at last the breeders of this breed of sheep are realising the value and worth of this association. In respect to the export demand for the Kent or Romney Marsh sheep it has been officially stated that during the current year 529 sheep have been exported as against 146 during the same period of last year. This is a notable increase, and one that must have been of very considerable importance to those who have participated in this large demand.

More than one vendor of sheep for the Argentine has asked why is it that so few reports of the auction sales of English sheep have been given in this column during the past season. The reply is simply this, that for some reason or other, almost without exception, no reports of these sales have been given in the Argentine papers.

It may be that these papers consider by omitting such reports they are doing good service to their countrymen by not letting the English breeder know the prices realised, etc. If this is so, the sooner it become realised that such practices are not in accord with the true interest of sound business, the better, for the only inference that will be drawn from this omission here is that the prices realised have been so satisfactory to the importer that, were they known, higher prices would be asked for sheep when next they wanted to purchase.

Those, therefore, who are interested in the sale of sheep for the Argentine market can, with every fidence, treat this year's sales as having been thoroughly satisfactory to the importer, and place the value of the sheep now coming on for sale on this assumption.

York.

This year's fat stock show at York was quite up to the standard of previous years as regards quality, though the entries were somewhat fewer than last year, the decrease, however, being chiefly in newer sections. The total was 2,789, as against 3,163 last year, but the cattle market was taxed to its utmost as far as accommodation was concerned, and it is just as well the entries were not more numerous. Cattle numbered 124, sheep 55, pigs 58, roots 321, dressed poultry 57, eggs 16, poultry 1,289, pigeons 690, and products of the dairy and the farmyard made up the rest of the total.

The feature of the Shorthorns was the white ox, just under three years old, sent from the Royal Farms at Windsor. It is one of the progeny of Royal Duke and Maid of Denmark 4th. It made its first appearance in the show yard at Birmingham last week, when it gained a second prize in its class. At York, however, it went one better. Though lacking a little in weight compared with its rivals—it scaled 124 stones—it was a Shorthorn of nice character and handled well. Mr. T. B. Earle, of Alborough Hall, Darlington, took second prize with a shapely red and white ox of good substance. The same owner got the first award in the Shorthorn heifer class with a red and white animal, which was second at Birmingham and reserve for the best Shorthorn in the show. It also took a first at Norwich. A big class of crossbred oxen was headed by Master Peter Dunn's Weaver, a useful black steer of Scottish origin. Crossbred heifers were a smaller but useful class. Mr. E. Gibson Heslop, of Gainford, Darlington, was first, with a black heifer of the Aberdeen Angus type, which had a minor success at Edinburgh last year, and has not been shown since. A nice-looking roan, entered by Mr. Peter Dunn, of Hull, was placed second, which is a step in advance of her Birmingham achievement.

The Irish cattle was one of the best displays ever seen at York, and the judges were a very long time in arriving at their decisions, more especially in a strong class for horned Irish bullocks. Premier honours fell to Mr. George Lax, of Weatherby, in this class. Close competition was seen in the local tenant farmer classes. In the class for oxen not exceeding three years, Mr. Carlton, of Crockey Hill, York, came out first with a polled Angus, which also topped the class for the best ox for butchering purposes, and won the York Challenge Cup for the best beast exhibited by a tenant farmer. The cup, which has been won for the last two years successively by Mr. Peter Dunn, is thus retained by the society for further competition.

The pure Scotch classes included some very interesting stock. One of the most notable successes was that of the Seaton Delaval Coal Company's Blue Blood of Delaval, a nice-looking heifer, symmetrical, weighty, and very well topped. Although never shown before, it carried off chief honours in a strong class of polled heifers, and secured the Faber Challenge Cup for the best fat beast in the show. A heifer, bred by Lord Rosebery at Dalmeny, and shown by Mr. Peter Dunn, of Hull, was second in the class, and was closely followed by the Duke of Portland's Welbeck bred Aberdeen Angus Bacchante. The Earl of Durham obtained both the first awards in the two classes for Highland cattle.

Sheep made a show quite up to the high average which is attained here, both in regard to fleece and flesh. The challence cup for the best pen of sheep in the show was secured by Messrs. R. and J. Davison, of Malton, who were also the winners in 1903. Theirs was a remarkably good group, both as regards size and and substance. The most successful exhibitors of mountain sheep were Mr. M. Sherwin, of Carthorpe, Bedale, Captain Behrens, of Malton (who is president of the society for the year), Messrs. Francis Coates and Son, of Malton, and Mr. William Wood, of Helmsley.

Pigs were numerous and of good quality, but were drawn entirely from the district immediately around York. Mr. W. L. Wright's special prize for the best exhibit in the classes for pork pigs was taken by Captain Behrens. Some excellent dressed poultry was shown, and the miscellaneous produce, such as cream, cheese, bread, Christmas cakes, was very creditable.

"The Agricultural Annual and Mark Lane Express Almanac for 1906" is now ready. It contains specially written articles on all subjects of interest to a farmer. Send at once for a copy. Price 1s.; post free, 1s. 4d. "Mark Lane Express" Office, 3, Wellington Street, Strand, London, W.C. [ADVT.]

Plymouth.

The West of England Fat Stock and Poultry Society, as its title indicates, embraces a wide territorial area within the sphere of its influence, and its thirty-fifth annual exhibition, held in the Plymouth Market on Wednesday and Thursday, was, alike in its magnitude and the quality of the exhibits, worthy of the high position which the society occupies in the Western Counties. For the first time in the history of the society the entries totalled over 1,000, and in a large measure this gratifying circumstance was due to the growth of the poultry section, which reached unrivalled dimensions; but the other departments, although they showed some numerical fluctuations, were of the highest, and, generally speaking, the show was the best of the series.

In the cattle section there were 74 entries, slightly less numerous than last year, but their general excellence was of an even higher standard. Some breeders from the neighbourhood of Barnstaple, who usually compete, were not represented, and owing to the absence of their animals the North Devon breed made a smaller show than usual. With scarcely an exception, however, the animals shown were very choice, and thoroughly typical of the breed. Only one young ox was paraded in this section, but it was a really splendid specimen. The old North Devon oxen formed a very symmetrical quartette. Only a few cows were shown of this breed, but their quality was of the best. South Devons filled three exceptionally strong classes, and were probably the best collection of the breed yet exhibited. Full of promise were the young South Devon oxen, the chief award going to Mr. F. W. Rowe, of Lostwithiel, for a remarkably well developed two-year-old beast, coming from the same stock as the animals which on three occasions have won the same breeder the championship prize. The same animal was also a winner at Smithfield. The old steers of this breed are really a superb collection, and the chief prize-winner in this calass, Jumbo, a massive creature, shown in the pink of condition, owned by Mr. Roberts, of St. Germans, was also awarded the president's cup for the best beast in the exhibition, Sir Massey Lope's cup, for the best ox or steer, the cup given by Mr. F. J. Nicholls for the best beast in the show exhibited by a tenant farmer, and a piece of plate presented by the Plymouth Co-operative Society for the best South Devon beast in the show. Scarcely inferior to the oxen were the South Devon cows, and the chief prize winner in this class. Mr. Helmer's Constance was awarded the special presented by the Plymouth Hotels Company for the best cow or heifer in the show, and it also ran Jumbo close for the championship prize. Among the crossbreds were some fine specimens of other breeds, and Mr. Alexander's Holt Boy, which took the first prize in the class, was adjudged the second best ox in the show. The pairs of steers gave the judges great difficulty in discriminating between the beasts exhibited by Mr. Peake, of Harbertonford, and Mr. Gibbings, of Northtawton. First two and then four judges were unable to agree, and finally Mr. T. Pitts, who was called in as umpire, gave the preference to the pair from South Devon. Among the dairy classes were several very choice milch cows, while the butchers' beasts looked a very profitable lot. Taken altogether, the cattle formed one of the best collections yet shown under the society's auspices.

Although the number of sheep entered did not compare so favourably as in some previous years the quality was exceptional. Messrs. Matthews, of Antony, secured the first in a class for a pen of three long-woolled wethers of any breed, not Dartmoor, under two years old. The three sheep weighed 7 cwt. 3 qrs. and 25 lb. Messrs. Matthews were also deservedly awarded the champion prize of three guineas, presented by Messrs. Thos. Hoyle and Sons, for the best pen of sheep in the show. The Earl of Mount Edgcumbes was awarded second honours with a magnificent pen, which weighed 7 cwt. 2 qrs. and 20lb. The Governers of the Dartmoor Prison got first and third with two capital pens of Dartmoor wethers; Mr. F. Damerell, of Plympton, being placed second with a really grand lot of sheep. He also secured the Polienta Company's special for the best pen of sheep fed on their food. Mr. A. C. Hall, of Marldon, Paignton, repeated the success he gained at the recent Smithfield Show with his splendid pen of three wethers of any long-woolled breed not exceeding twelve months old. The three sheep he exhibited were only nine months old, and turned the scale at 6 cwt. 1 qr. 0 lb. His second pen, of a similar age, weighed 5 cwt. 3 qrs. 24 lb., and that of Messrs. H. Tope and Sons, which were given third prize, 5 cwt. 1 qr. 27 lb. Messrs. Weaver's special prize of a guinea was awarded to Mr. Hall's exhibit.

The show of roots was, without doubt, the best ever seen here, while the same remark would

apply to the poultry section, in which there were no fewer than 400 head of live birds. Butter and cream also made a good display.

Leeds.

A record number of entries was received for the Forty-Sixth Christmas Fat Stock Show of the Leeds Smithfield Club, held at the Corporation Cattle Market, Leeds, on Tuesday and Wednesday, the total being 2,148, as compared with 1,959 last year. The chief increase was in the Poultry section, which drew 1,069 entries, as compared with 518 in 1904. Cattle numbered 92, as compared with 108 last year; but on that occasion the entries were exceptional, and this year's figures were up to the average of recent years. Sheep numbered 24, as against 28, and pigs 32, as compared with 72 last year, but the number was the same in 1902.

The exhibits in the cattle section formed an excellent lot, and included several which had secured honours at other shows. In the class for Shorthorn oxen under three years of age the King exhibited a bullock just under the age limit from the Royal Farm at Windsor. It was a typical white by "Royal Duke," and was of a good character. It was second at Birmingham and at York. It was placed at the head of the list here, beating an animal shown by Mr. James Hilton, of Kirton Lindsay, which received the second award. The Shorthorn cows of any age, or heifers under three years, included an animal of good quality, belonging to Mr. Alexander Whitelaw, of Edinburgh. In addition to the principal honour in its class, it secured a piece of plate, offered by the Leeds Licensed Victuallers for the best animal among the Shorthorns. A heifer owned by Mr. T. B Earle, of Darlington, was second. In the section for Cross-bred or Irish cattle, the champion of the show was found, and this animal provided what may be described as the feature of the show, for it won outright for Mr Peter Dunn, of Sigglesthorne, Hull, the Walker and Hall 50-guinea challenge trophy. Mr. Dunn took this prize, which represents the championship of the cattle section, in 1902 and 1904, but in 1903 the King won it. Mr. Dunn's final victory has not been without its edge of keenness. At York his two-year-old Cross-bred, Weaver, had to play second fiddle in the supreme contest to the Seaton Delaval Coal Company's Aberdeen-Angus heifer, but now the tables were turned, and the verdict accorded with the opinion of nearly every one of those who watched the judging, cheers being raised for the veteran exhibitor. The champion animal, which was bred by Mr. Finlay Munroe, of Rockfield, N.B., is a cross between a Shorthorn and Aberdeen-Angus. With a beautiful coat, he is a very deep, square, gay, and stylish steer, and walks well. In a strong class at Birmingham he was second to Mr. R. W. Hudson's Danesfield Midnight, the Norwich male champion, and in good company at York he took the highest class honours. Besides securing at Leeds the challenge trophy, Mr. Dunn gained with the same animal the President's prize, worth £10, and the Leeds Tradesmen's Plate, of the same value. The heifer from Seaton Delaval was a charming and well-balanced specimen of the Aberdeen-Angus, but of less scale and weight than the Sigglesthorne bullock. A heifer belonging to Mr. E. G. Heslop, of Darlington, was first among the cross-bred or Irish cows or heifers; and another heifer shown by the Earl of Durham was second.

The Scottish cattle did not make a very big show, the breeds represented being the Aberdeen-Angus and Highland. In the class for polled Scottish oxen only two were entered, and there was one absentee. Mr. T. B. Earle's bullock, however, had an abundance of merit, and the judges had no difficulty in awarding to it the first prize. The cows numbered five, and the leader was found in a beautifully-moulded animal of good quality owned by the Seaton Delaval Coal Company. A bigger animal, belonging to Mr. Peter Dunn, was placed second. Two classes were provided for the Highland cattle, but there were only five entries. The animals exhibited included prize-winners at Birmingham and London. Bullocks shown by the Earl of Durham and Mr. T. L. Wickham-Boyston, of Boston Spa, were placed first and second respectively. In the cow and heifer classes, an animal shown by Mr. H. M. Worsley Taylor, K.C., M.P., Whalley, was successful, and the Earl of Durham's cow was placed second. The prize for the best pair of Scotch or Welsh cross-bred bullocks or heifers most suitable for the butcher was awarded to a pair shown by Mr. T. B. Earle, who also secured two special honours. A pair exhibited by Messrs. Wentworth, Son and Nephew, Ltd., were second.

As usual, sheep were exhibited by only a few gentlemen, there being 24 entries and eight exhibitors, all of whom, with one exception, were awarded. The specials in the section went to Messrs. R. and J. Davison, of Malton.

The pigs, excepting in a few instances, were only moderate. In the solitary large breed class—two others had been cancelled—Messrs. A. Duchering and Sons, Kirton-Lindsey, brought out the two winners well. The highly-commended animal, shown by Mr. G. W. Cryar, of Wetherby, was more of the large breed sort, and had taken a number of prizes The small and Tamworth breeds were only moderate in quality, while the porkers were just a nice lot. Sows and litters formed a good entry, and some nice animals were exhibited, but the Leeds Industrial Co-operative Society took easily. Mr. Joshua Sheldon's challenge trophy and the Leeds Tradesmen's Plate were taken by Messrs. Duchering.

The entries in the poultry classes were nearly double those of last year; the quality, too, was in advance of that shown in 1904.

Ipswich.

The annual show of fat stock at Ipswich was held on the opening days of last week, and that it is as popular as ever was proved by the large entry of stock; in fact, it was a record one, the total being 1,081, against 1,076 last year and 1,072 in 1903; whilst the attendance of visitors was on a large scale. The wide range of interesting features of previous years was considerably extended on the present occasion by the introduction of what was called a Working Trades Exhibition, comprising about 70 stands, on which was displayed a most comprehensive collection of the trade specialities of the town and district. This constituted a show in itself, and materially added to the attractiveness of the Ipswich Christmas display.

The cattle classes, which, as usual, were one of the features of the show, were better filled, with one exception, than on any previous occasion. The increase in numbers, and the excellent quality of the majority of the beasts, prolonged the duties of the judges, who were kept going until a late hour in the day. The multiplicity of the championship classes, though an excellent thing, added to the work of the judges, who with the stewards had a rather trying time when the various champions had to be selected. One of the smallest classes was that for steers or heifers of any pure or cross breed under three years old. Mr. E. T. Learner, of Burgh, Ayisham, the owner of the winner, a cross-bred heifer scaling 14 cwt., had a close contest with Mr. Spencer Dawson, Stratton Hall, whose cross-bred steer, a finely-developed animal, reached 17 cwt. The third, a good type of Shorthorn, was exhibited by Mr. R. J. Thurman, of the Dairy Farm, Semer. Two of these three animals were in close running for championship awards. Mr. Learner's cross-bred was reserved for the 25-guinea Challenge Cup presented by the Mayor of Ipswich for the best beast in the show, which Mr. Spencer Dawson won last year. The last-named gentleman was reserved for another 25-guinea cup for the best beast in the show that had been grazed in the county, and the property of the exhibitor for not less than six months previous to the show.

A similar class as the foregoing, but closed to Suffolk, attracted as many as 15 entries, amongst which was ultimately found the champion beast of the show, an Aberdeen-Angus heifer owned by Mr. R. J. Thurman, of Semer. The animal, which was bred by Mr. Thomas Moy, of Stanway Hall, has been in the possession of Mr. Thurman some 18 months or more. Its appearance at Ipswich last Christmas led to the owner taking a second and two special awards. The same animal was also seen at the recent Norwich Show, where the heifer was second in its class, but at Smithfield it only gained the reserve number, although probably there was reason to believe it might have had a third prize card. Scaling 15 cwt. 1 qr. 7 lb., it was not a too weighty beast; it certainly appeared a small-bone animal for its weight. Besides being the champion beast (steer or heifer) in the yard, it also took the 25-guinea Challenge Cup given by the Mayor of Ipswich, together with the other for the best that was grazed in the county. Sir Frederick Adair was both second and reserve in this class, and it is noteworthy that the reserve animal, a Polled Angus steer, was the heaviest beast in the showyard, being over 19 cwt.

Steers or heifers of the Red Polled breed not exceeding three years old were eight in number. The best of these was shown by Sir Walter Corbet, whose Red Polls have taken prominent places at all the recent Christmas shows. It was remarkable that Sir Walter won the premier prize with a heifer that was reserved both at Norwich and Smithfield. The prize-winning steer at the latter show, owned by A. E. Fellowes, M.P., was only reserved, a position to which many critics argued it should not have been relegated. Since the Islington exhibition Mr. Fellowes's heifer has deteriorated somewhat, and there was, therefore, good reason why the premier prize should be given to another animal. In other ways previous judgments were reversed; the same gentleman's heifer that had already taken a first was now reserved, while Mr. Thurman's h.c. Norwich Show steer crept into second place. This animal was last year first in its class, besides winning a couple of specials. Five pairs of fat steers and heifers produced good competition, the winning pair weighing 15 cwt. 2 qr. and 12 cwt. respectively. These two animals were reserved for the champion prizes for the best steer and best heifer in the show under two years old, grazed in Suffolk. Red Polled steers or heifers under two years old, numbering eleven, included a Norwich Show exhibit in a nice steer belonging to Sir Walter Corbet, which was second, although at the Norfolk Show it was first and reserved for the cup. The premier award went to the Hon. A. E. Fellowes for a rather leggy animal, which was second at Norwich.

There were nineteen steers or heifers, not exceeding two years, the best of which, a Polled Angus heifer, owned by Sir Robert Adair, received the fifteen-guinea challenge cup, offered for the best beast in the show under two years old, grazed in Suffolk. It was a level and well-developed beast, weighing 13 cwt. 2 qr.; it also handled well. The second, a Shorthorn steer, owned by Mr. J. C. Pike, of Stuston, was an extraordinary animal for its age. The first and second prizes in the class for animals not exceeding eighteen months also fell to Mr. Pike. The better of the two, which was on the small side, was grazed to the verge of perfection, but the second was a larger type, and not so well developed. The best of the butchers' beasts, of any breed, came from Mr. Kenneth M. Clarke's Iken Hall Farm; it was a nice quality animal, just suitable to the requirements of the butchers of the present day, and in accordance with the public taste, which is in the direction of small joints. Sir Hugh Adair, who was second with an animal weighing 17 cwts., exactly four above the winner, was probably of too large proportions to be successful in the class. The remaining champion awards—namely that for the best Red Poll, went to Mr. Fellowes, M.P., while the other for the best beast, judged by the Ipswich butchers, was taken also by Mr. Fellowes, with Mr. R. J. Thurman reserve.

The show of sheep was a good one, Suffolks, of course, largely predominating, and in this section the entries from the noted Walton Grange flock again came prominently to the front. In the class of three wethers, of any breed, Mr. Herbert Smith entered the sheep which secured the cup in London, and took first at Norwich, and were reserved for the championship there. They handled very firmly, and the judge had not much difficulty about giving them the first prize on this occasion. They afterwards took the fifteen-guinea challenge cup for the best pen of sheep and lambs in the show, which has to be won three years before becoming the absolute property of any exhibitor. Mr. Herbert Smith was the winner last year. The same pen carried off the five-guinea champion prize, given by Messrs. George Mason, Ipswich, Limited, for the best pen of fat sheep or lambs in the yard, not to exceed twenty-three months old. Another nice pen belonging to the same flock was second in the class. The entry of Suffolk wether lambs was a large one, and here again the Walton Grange flock came to the front, a pen which carried off first honours at Smithfield Show again coming into the front rank, and they were reserved for the challenge cup and the champion prize. A little interest was centred in the awarding of the second prize in the class, an opinion having been expressed at the time that Messrs. S. and F. Traylen were deserving of a higher honour than third place at the Smithfield Show. On this occasion, however, two different gentlemen confirmed the London judgment, by relegating Messrs. Traylen's pen to the third position. The Earl of Cadogan, K.G., was fourth, with a pen which might with advantage have been sent to Smithfield.

The competition in the class for a pen of three pure-bred lambs, other than Suffolk, was not a strong one, but Mr. Charles H. Berners sent a couple of pens of Southdowns which carried off first and second. The competition for the prizes offered for a pen of three lambs, of any breed or cross-bred, uncoloured and untrimmed, and drawn direct from the field unhoused and unyarded, was not a strong one. Mr. Herbert Smith sent three, which were a long way ahead of the others, another pen of the same flock being awarded second. The gentleman made a score entries—with two in the carcase competition—all of his own breeding.

The display of pigs was, perhaps, on the whole, as good as has ever been seen at the Suffolk Fat Cattle Show. The class for fat pigs of any breed, one year old and under, was a big one, and the issue of the judging process was watched with some interest, because there was the semblance of a fight between the Large Whites and the Large Blacks. Mr. Russell Walker, of Marlesford, who is always a keen competitor, showed a Large White of great size and excellent quality, and it took precedence of a couple of Large Blacks belonging to Mr. Kenneth M. Clark, of Sudbourn Hall, this gentleman being awarded first and second. With regard to pen of three pigs, under nine months old, a Berkshire came into com-

petition with the Large Blacks, and this time a pen of the latter, hailing from Sudbourn Hall, were the victors, Mr. C. H. Berners's Berkshire being awarded second, and another Large Black, entered by Mr. Kenneth M. Clark, taking third. Some nice pigs were entered for the class of five pigs suitable for the London market. Here the honours went to a Monewden exhibit, whither they have gone on many a previous occasion, the Executors of Mr. George Gooderham keeping up the old charter, and sending a class of pig which commanded the attention of many admirers; albeit, some thought that they were this time just a little too big for Londoners. Mr. John Goddard, of Tunstall, was second, with a pretty pen of cross-breds; but the third prize went to the Executors of Mr. George Gooderham

The decision in a big class for two pigs for bacon gave rise to a little comment, Mr. Russell Walker having a pen of Large Whites, by a boar belonging to Mr. Sanders Spencer, and moreover, Mr. Russell Walker had taken the first prize in the same class for three years in succession at this show. This pen was awarded the first prize in it class, the second and third prizes going to Mr. John Goddard, and the Executors of Mr. George Gooderham, but the crucial test came in awarding the champion prize for the best "fat" pig in the yard. The judges found themselves in a difficulty, because they were bound to adhere to the lines laid down, and they awarded the championship to an exhibit belonging to Earl Cadogan, as being the fattest pig. Mr. C. F. Marriner offered a special prize for the best two fat pigs, not exceeding twelve months old, of the Large Black breed, and this was taken by Mr. Kenneth M. Clark, two other pens from Sudbourn Hall being reserved.

Ashford Cattle Show.

It is a pity in some respects that this fixture does not take place before Smithfield, because, if this were so, we should then possibly find other entries at the London Show. The reason for this is that amongst the exhibits at this show there were both in the cattle and sheep entries that were quite worthy to be sent to London.

The important work of adiudicating upon the entries were undertaken by Messrs H. Levey and W. Massie for cattle, Arthur Finn and Allan Cooper for sheep, and A. T. Miles for pigs.

The Sussex cattle classes had a somewhat smaller entry than last year, but the addition of the animals that had been specially reserved until the London Show made these classes of good average merit The Earl of Derby won rightly enough in the older steer class, but the correctness of the award that gave Mr. W. W. Berry's steer, bred by Colonel W. W. Hammond, precedence over Mr. W. F. Winch's good-handling was open to question. Mr. W. Levett came in for third honours. The younger steer class had for its winner Mr. W. F. Winch's entry, a well-grown steer of merit.

The older heifer class was an excellent trio, all of good merit, and in the winner, that came from Mr. Gerald Warde's herd at Tutsham, West Farleigh, was found one of grand quality. The younger heifer class had a popular winner in Mr. L. Hardy's entry; Mr. E. Ascherson taking second honours with one bred by Captain S. Webb, leaving the Earl of Derby r.n.

The Cross-bred and any other pure-bred classes had an excellent entry of first-class animals, mostly of the Aberdeen-Angus breed or its crosses.

The older steer class found a fine Aberdeen, bred by Mr. G. Drummond and exhibited by Mr. W. Levett, at its head. The Breed Cup went to this good steer. Mr. W. W. Berry come in for second and third with a very typical pair of steers, deep in the carcase and wealthy in flesh. The trio of winners in the younger steer class were of high merit all through. Mr. T. Wotton was first and r.n. for the Breed Cup, and Mr. G. Drummond second and r.n. The senior heifer class had for its winner Mr. T. Wotton's very fine and level heifer, a choice speciment of its breed. Mr. W. W. Berry came in with a cross-bred for second honours.

Sir H. N. Dering's young Shorthorn heifer went clearly to the fore in the younger heifer class; and in the final competitions the Breed Cup and the r.n. for champion honours went to her. Mr. T. Wotton, with a very promising young Aberdeen-Angus heifer, came in second. The calf class was a good one. The Marquis of Camden won first honours and Sir H. N. Dering came in second. Both of these entries were of considerable promise and well brought out.

The sheep section showed most fully the enormous amount of improvement that has been effected in recent years in respect to the Kent or Romney Marsh breed, particularly in the more early development and maturity of the lamb classes, and thus emphasises the value of the work that has been accomplished by the Kent or Romney Marsh Sheep Breeders' Association.

The wether class of a dozen entries was a most typical one, and it is quite certain that the winning pen, that came from Mr. C. File's, was one that received no more than its just recognition, when first place in this strong class was given it.

The lamb class was one of which it can be written that none of this age in former years have in the aggregate been of better or more typical merit. The increased weight and depth of flesh found upon these lambs only proves how erroneous it is to suppose that the breed will not mature rapidly, and shows all that is requisite to secure its early development and maturity is to give it the same careful and judicious treatment as other breeds have, and the results will be equally satisfactory. Mr. T. Wotton here, as in London, went to the top of the class—a correct award; and here, as at Smithfield, the pen, with equal justice, received the champion award.

The Down classes were not large. Mr. F. E. Speed took leading honours in the class for wethers, followed by a very fine and well-fed pen from Colonel W. W. Hammond's flock, leaving the r.n. to Mr. W. M. Cazalet.

The class for cross-bred lambs was a very good one indeed. Sir H. N. Dering was first and third with two very good pens. But the best pen of the lot was a very choice one of Southdown-Kent cross. A pen of very superior merit from Mr. R. Kinnard's floc. The executors of Mr. Elvy came forward with a level and well-fed pen, to which the r.n. was given.

The Duchess of Devonshire won leading honours in the pig section. The best single pig came from this noted herd, to which champion honours were also given. Captain S. Webb and Sir H. N. Dering were the other leading winners.

Lewes.

The show of Fat Stock held at Lewes last week proved one of the best ever seen here, and fortunately the weather was favourable, so that a large attendance of visitors was recorded. In the classes for beast 79 entries were received, as compared with 74 last year, and the total has only once been exceeded, viz., 96 two years ago; there were 95 sheep (a record), against 80, the previous highest number in 1902; pigs numbered 13, and thereby maintained the average; while in a new class instituted this winter four calves were entered. The judges found their task unusually difficult in the classes for sheep, and were complimentary in their criticism of the specimens, competition in the class for Southdown wethers under two years of age being exceedingly keen. Concerning beasts, too, the quality of the animals proved a subject for favourable comment, a cross-bred steer, shown in splendid condition by Mr. Wildman Cattley, of West Grinstead, claiming premier notice. This animal gained the first prize in its class and the silver cup awarded for the best fat beast in the show.

National Agricultural Examination Board.

The National Agricultural Examination Board held its annual meeting on December 7, at 13, Hanover Square, under the presidency of the Very Rev. Dr. Gillespie, LL.D., Chairman of the Board. There were present:—Lord Moreton, Mr. J. Bowen-Jones, Mr. Martin J. Sutton, and Sir Ernest Clarke (representing the Royal Agricultural Society of England); Dr. Gillespie, Dr. David Wilson, Mr. Alexander Cross, Mr. John Speir, and Mr. James Macdonald (representing the Highland and Agricultural Society of Scotland); Dr. William Somerville (Board of Agriculture); Mr. John Struthers, C.B. (Scotch Education Department); and Mr. Ernest E. Godfrey (Secretary of the Board).

The report on the results of the examinations held during 1905 showed that ninety-one candidates had entered for the National Diploma in Agriculture, of whom twenty had gained the diploma, and that sixty-one candidates had entered for the National Diploma in Dairying, of whom thirty-one had gained the diploma. The regulations and syllabus for the diploma examinations of 1906 were considered, and, after revision, were approved and ordered to be issued forthwith. The examiners for the several examinations were also appointed.

It was decided to hold the seventh annual examination for the Diploma of Agriculture at the Leeds University during the second week of May, 1906, and the tenth annual examination for the Diploma in Dairying at two centres—one in England and one in Scotland—in the autumn. On the motion of Dr. Gillespie, Lord Moreton was unanimously elected Chairman of the Board for the year 1906; and Lord Moreton, Dr. Gillespie, Sir Ernest Clarke, and Mr. James Macdonald were, on the motion of Mr. Bowen-Jones, reappointed as an Executive Committee to conduct the Board's examinations of next year.

SOCIETIES.

The Polo and Riding Pony Society

Mr. Tresham Gilbey (President Elect) occupied the chair at a meeting of the Council of the Polo and Riding Pony Society, held at 12, Hanover Square, London, W., on the 8th inst., when two new new members were elected.

Mr. Tresham Gilbey (Chairman of the Finance Committee), presented the financial statement, indicating a balance at the bank of £96 12s. 4d.: receipts since the last meeting, £12 17s.; arrears of subscriptions, £52 11s.; accounts for payment, £50 15s. 9d. This report was adopted.

Editing Committee.

Mr. C. Howard Taylor (Chairman) reported that the Committee had met the previous evening, and had carefully revised the proofs of the 1905 Supplement. Three entries had been submitted for registration in the next volume of the Stud Book, two of which they had accepted, though the inspection report in respect of the third did not permit of their recommending its entry in the next volume of the Stud Book. The 1906 Supplement would contain the illustrations of eight ponies which had been awarded prizes or medals at the London and affiliated shows. This report was adopted.

Horse Show Committee.

Mr. G. Norris Midwood submitted the report of this Committee, and stated that the following gentlemen had kindly consented to officiate as judges:—

Breeding Classes.—Rev. E. A. Milne, M.F.H., Chilfrome, Dorchester; Hon. Alexander E. Parker, The Cottage, Doveridge, Derby. Referee; Capt. G. Phipps Hornby, Sandley, Gillingham, Dorset.

Eastern Sires.—Mr. James Tagg, 94, Wellesley Road, Croydon.

Riding Classes.—Mr. Frank Belville, Papillon Hall, Market Harborough; Capt. G. Phipps Hornby, Sandley, Gillingham, Dorset. Referee: Mr. J. B. Dale, Caribury Hall, Darlington.

Shetland Ponies.—apCt. W. Hope Johnstone, Polebrook, Edenbridge, Kent.

Competitions.—Major F. Egerton-Green, Hurlingham Club, S.W.; Capt. E. D. Miller, Roehampton Club, S.W.; Mr. F. H. Unwin, Sheffield

Mr. Charles Sheather, F.R.C.V.S., had again consented to act as measurer of ponies, while he would also attend by permission of the Hurlingham Club to measure all ponies in the riding classes not holding the Hurlingham certificate.

The Veterinary inspectors appointed by the Hunters' Improvement Society had also consented to act for this Society, viz:—Mr. J. Malcolm, F.R.C.V.S. (Birmingham); Professor James MacQueen (Royal Veterinary College); and Mr. J. J. Ridley, M.R.C.V.S. (Beverley).

The prize list drawn up by the Council at their last meeting had been carefully revised, with the following additional prizes, which had been accepted with thanks:—Eastern sires (and sires by an Eastern sire), the sum of £3 offered by Mr. Everard R. Calthorp as second and third prizes. Produce class: A second prize of £5, and a third prize of £2, offered by members of the Council. Prizes value £21 offered conjointly by Mr. G. Norris Midwood and Mr. S. H. Moorhouse for the best heavy-weight ponies suitable for hacking purposes.

A letter was read from Mr. Mungall, representing the Shetland pony breeders, intimating that the sum of £10 had been subscribed to insure the incorporation in the prize list of two classes for Shetland pony stallions and brood mares.

The Committee had, upon the initiative of Mr. Tresham Gilbey, carefully considered the height of the young stock, and they recommended that both for London and for the affiliated country shows the heights should be amended as follows:—Yearlings not exceeding 13 h. 3 in.; two-year-olds not exceeding 14 h. 1 in.; three-year-olds not exceeding 14 h. 1½ in.

This report having been adopted, Mr. G. Norris Midwood wished to direct particular attention to the arrangements made for the annual dinner of members, which would take place at the Hotel Metropole on the Friday evening of the show week, March 16, and he hoped that members would make a point of attending the dinner.

Height of Young Ponies.

Mr. Tresham Gilbey called attention to the recommendations of the Horse Show Committee in respect to the heights of the young ponies. He thought that it was absolutely necessary for the Society to fall into line with the requirements of the market. The bigger the pony the larger the price that could be obtained from buyers. Sir Richard Green-Price, a member of the Committee, agreed with the recommendations, though the forcing of yearlings was, in his opinion, extremely dangerous. In the original proposition submitted it was proposed that the increased heights should be subject to the young animals being the produce of registered mares, and with this qualification he entirely agreed, as there was little danger when

young ponies were out of a dam not exceeding 14 hands 2 in. He thought that the time was approaching when they must consider whether their prizes for yearlings should be limited to ponies bred from such mares.

Mr. John Hill, while agreeing with the previous speaker and the recommendation of the Committee, thought that it would have been better if no heights had been fixed, provided no pony exceeding 14h. 2in. Colonel Sanders Darley thought that this was putting too much upon the judges. Rev. D. B. Montefiore considered that the proposal would be correct if the breeding qualifications were added. The provision of the heights in each class of young stock was a guide to breeders, as showing the heights at which the Society was aiming.

Mountain and Moorland Ponies.

Letters had been read from several conveners calling attention to the foaling qualifications of the brood mares winning the Society's prizes at the district shows, and urging the omission of the condition that requires such mare to be in foal, or have produced a foal in 1906, "to a sire registered in the respective section of the Polo and Riding Pony Stud Book. It was urged that many of the mares ran free on the moors, and therefore it was impossible to state with certainty by what stallion they were in foal, and at the present time of the year it was too late for exhibitors to make any attempt to comply with the condition.

The Council recognised the justice of this representation, and the Secretary was instructed to inform the secretaries of the societies at which the prizes would be offered that it would be sufficient to entitle the mare to the prize money if it foaled in 1906.

National Shows.

Letters were read from the Royal Agricultural Society of England, accepting the Society's offer of gold medals for polo ponies at the Derby meeting, and from the Highland Agricultural Society, the prizes for Highland ponies at their Peebles Show.

Royal Agricultural Society.

The attention of the Council was called to the three classes which would be offered for polo and riding ponies at the Derby meeting, and urging the desirability of this Society providing two additional classes, viz., three-year-old geldings and fillies, and for two-year-old colts, geldings, or fillies. The suggestion was also accompanied by an offer of prizes amounting to £20 for the first class if the other members of the Council were prepared to provide prizes for the second class. This met with a cordial response, and the Secretary was instructed to convey the offer to the proper quarter, while it should also be suggested to the Royal Agricultural Society of England that the wording of the class for brood mares should correspond with that in the other classes for horses, viz., brood mares with foal at foot.

The Secretary was also instructed to suggest to the Hurlingham, Roehampton, and Ranelagh Clubs that if they provided classes for brood mares at their summer show they should also adopt this wording.

Affiliated Shows.

Mr. C. Howard Taylor, pursuant to notice, desired that members in touch with agricultural societies should be asked to use their influence to have classes for polo and riding ponies included in their schedules, and the Secretary was instructed to place himself in communication with all societies that had offered the Society's medals, and submit the result of his inquiries to the Horse Show Committee at their next meeting.

Selection Committee of Candidates for Council.

The Council constituted the Committee as follows:—The President, Mr. John Barker, Lieut.-Colonel C. W. Campbell-Hyslop, Colonel Sanders Darley, Mr. Tresham Gilbey, Sir Richard Green-Prices, Bart., Mr. G. Norris Midwood, Rev. D. B. Montefiore, and Mr. C. Howard Taylor—to meet on January 16, at 3 p.m.

The Council, having arranged the dates of their meetings in 1906, adjourned till Friday, February 9, 1906.

Shorthorn Society.

Meetings of the Committees and Council of the Shorthorn Society were held at the Society's rooms, 12, Hanover Square, W., on the 5th inst., Lord Moreton (vice-president) in the chair.

The minutes of the previous meeting having been approved and signed, eight new members were elected.

Lord Moreton reported that the Editing Committee had examined the list of pedigree exportation certificates issued by the secretary since the last meeting of the Committee, viz.:—For Germany, 4; Russia, 2; South Africa, 16; South America, 69; Sweden, 10; total, 101.

The Committee also reported the issue of Vol. 51 of Coates' Herd Book and considered and passed the forms and regulations for entering pedigrees in Vol. 52, the entries for which close on February 1 next.

The Committee considered several new and other pedigrees, with the evidence in support of their correctness, and which were accepted for entry in Vol. 52.

This report was adopted.

General Purposes Committee.

Mr. E. Potter reported that the accounts for the last month had been examined by Messrs. Welton, Jones and Co. and the Committee, and that the Committee recommended that cheques be drawn for printing the Herd Book, salaries and rent, etc., when due, amounting to £713 0s. 4d.

The Committee recommended the following scheme of prizes for 1096:—

CHAMPION PRIZES.

Royal Agricultural Society of England.—Two Champion Prizes of £50 each, for the best male and best female Shorthorn.

Highland and Agricultural Society.—Two Champion Prizes of £25, for the best male and best female Shorthorn.

Royal Dublin Society.—A Champion Prize of £20, for the best yearling Shorthorn bull bred in Ireland.

Bath and West of England and Southern Counties' Society.—A Champion Prize of £10, for the best Shorthorn bull.

DISTRICT PRIZES.

For the best Shorthorn bull, calved in 1905, located in the undermentioned districts:—

ENGLAND AND WALES.

Twenty-eight District Prizes of £10 each.

District.	To be awarded at the following Agricultural Shows.
Beds., Herts., and Middlesex	Bedfordshire.
Berks., Wilts., and Hants	Royal Counties.
Cambridgeshire and Essex	Essex.
Cheshire	Cheshire.
Cornwall and Devon	Royal Cornwall
Cumberland	Cumberland.
Derbyshire	Derbyshire.
Durham	Durham.
Gloucestershire and Monmouthshire	Gloucestershire.
Herefordshire and Worcestershire	Herefordshire and Worcestershire.
Isle of Man	Isle of Man.
Lancashire	Royal Lancashire.
Leicestershire and Rutland	Leicestershire.
Lincolnshire	Lincolnshire.
Norfolk and Suffolk	Suffolk.
Northamptonshire and Hunts	Northamptonshire.
Northumberland	Northumberland.
Nottinghamshire	Nottinghamshire.
Oxfordshire and Bucks	Oxfordshire.
Shropshire	Shropshire and West Midland.
Somerset and Dorset	Somersetshire.
Staffordshire	Staffordshire.
Surrey, Kent, and Sussex	Tunbridge Wells.
Wales (North)	Denbighshire.
Wales (South)	United Counties.
Warwickshire	Warwickshire.
Westmorland	Westmorland and Kendal
Yorkshire	Yorkshire.

SCOTLAND.

Four District Prizes of £10 each.

District.	To be awarded at the following Agricultural Shows.
Argyle, Perth, Fife, Kinross, Clackmannan, Stirling, Linlithgow, Dumbarton, and Renfrew	Stirlingshire.
Ayr, Wigtown, Lanark, Dumfries, Kirkcudbright, Edinburgh, Haddington, Peebles, Berwick, Selkirk, and Roxburghshire	Border Union.
Elgin, Banff, Aberdeen, Kincardine, and Forfarshire	Royal Northern.
Inverness, Nairn, Ross, Sutherland, Caithness, and Orkney	Northern Counties.

IRELAND.

Four District Prizes of £10 each.

District.	To be awarded at the following Agricultural Shows.
Connaught	Hollymount.
Leinster	Royal Dublin.
Munster	County Cork.
Ulster	Royal Ulster.

PRIZES FOR PEDIGREE SHORTHORN DAIRY COWS IN MILK.

At the shows of the undermentioned societies, for the year 1906, a prize of £10 will be offered as a first prize in a special extra class for pedigree Shorthorn dairy cows in milk, of four years old and upwards, the societies named to offer in such class a second prize of £5.

England and Wales.—Bath and West of England Agricultural Society; British Dairy Farmers' Association; United Counties Agricultural Society; Herefordshire and Worcestershire Agricultural Society; Gloucestershire Agricultural Society; Royal Counties Agricultural Society; Durham County Agricultural Society; Oxfordshire Agricultural Society; Leicestershire Agricultural Society; Shropshire and West Midland Agricultural Society; Royal Lancashire Agricultural Society; Cheshire Agricultural Society; Somersetshire Agricultural Society; Tunbridge Wells and Southern Counties Agricultural Society; Westmorland and Kendal Agricultural Society; Yorkshire Agricultural Society; Warwickshire Agricultural Society.

Scotland. Border Union Agricultural Society; Royal Northern Agricultural Society; Strathearn Agricultural Society.

Ireland. Royal Dublin Society £15); County Cork Agricultural Society; Hollymount Agricultural Society; Royal Ulster Agricultural Society; North-West of Ireland Agricultural Society.

The above prizes to be offered in a special extra class for pedigree Shorthorn dairy cows in milk, four years old and upwards on the first day of the show at which the prize is offered, eligible for, and entered in, Coates' Herd Book, or pedigree sent for such entry previous to the show. Such cows to be clean milked at six o'clock on the previous evening, and to be milked in the ring on the first morning of the show in the presence of the judge, who shall see the milk weighed, and any cow that does not yield up to the following standard shall be disqualified: Cows having calved within three calendar months of the first day of the show, 25 lb. of milk; if calved more than three calendar months from the first day of the show, 20 lb. of milk.

No animal having once taken one of these prizes is eligible to compete again.

ROYAL AGRICULTURAL SOCIETY'S SHOW, 1906.

The prizes for Shorthorn cattle offered by the Royal Agricultural Society in 1906 will be increased by the addition of the following prizes offered by the Shorthorn Society:—A class for Shorthorn heifers in milk, calved in 1903, with prizes £10, £6, and £4. Also two classes for pedigree Shorthorn dairy cows in milk, viz. Cow in milk, four years old and upwards, etc., £10, £6, and £4, and cow in milk, under four years old, etc., £10, £6, and £4, such cows to be entered, or eligible for entry, in Coates' Herd Book. Also £5 to the breeder of the first prize animal in each of the nine Shorthorn classes. These prizes being in addition to the two champion prizes of £50 each offered by the Shorthorn Society for the best male and best female Shorthorn exhibited.

This report was adopted.

Mr. R. Stratton, in moving the resolution below, of which he had given notice, said that as the Society now gave a very considerable sum of money for prizes for pedigree dairy Shorthorns, it only appeared reasonable that they should expect animals winning these prizes to be thorough dairy cattle, and with this object he and those whom he had consulted thought that the standard which was mentioned in his resolution was not too high for such cows. The dairy Shorthorn (Coates' Herd Book) Association had adopted this standard, and it was very desirable that in the interests of the breed they should work harmoniously and adopt the same standard qualification, and, with the view to prevent overlapping in offering prizes, he would suggest that the Shorthorn Society should give their prizes for fully-developed cows, and that the Dairy Shorthorn Association would offer prizes for heifers. He therefore moved—

That all pedigree dairy cows competing for the Shorthorn Society's prizes must be four years old and upwards on the first day of the show at which the prize is offered, and must be clean milked at six o'clock on the previous evening. That on the first morning of the show all cows shall be milked in the ring in the presence of the judge, who shall see the milk weighed, and any cow that does not yield up to the following standard shall be disqualified:—Cows having calved within three calendar months of the first day of the show, 25 lb. of milk; if calved more than three calendar months from the first day of the show, 20 lb. of milk.

Mr. J. P. Cross seconded the motion.

Mr. J. Harris pointed out that there would be some difficulty in applying these conditions to a few one-day shows at which the Society offered these prizes, these shows having no accommodation for animals sent in overnight.

Mr. Stratton thought these societies might make some arrangement by which they could obtain the prize under the conditions suggested, and, after some further discussion, the motion was put to the meeting, and carried, and the conditions added to the General Purposes Committee's report.

The question of judges for dairy Shorthorns was considered, and it was proposed that the members of the Council should send in names for the consideration of the General Purposes Committee.

The next meeting was fixed for early in February next.

Royal Counties.

The annual meeting of the Royal Counties' Agricultural Society was held at the Town Hall, Basingstoke on Wednesday, the retiring President, the Duke of Wellington, in the chair.

The annual report was as follows: The Council have once more to report a very cordial reception from the County Borough of Bournemouth, which they visited during the past year for the third time. The attendance was most satisfactory, the amount taken in gate-money being considerably larger than at the previous Bournemouth meeting in 1895, and with one exception never having been exceeded, the total sum being £2,522, as against £2,468 in 1904, and £2,234 in 1895.

The entries of live stock, as might naturally be expected, fell short of the show at Guildford, the horse classes especially being badly filled, in spite of increased prize money, but there was an excellent entry in the dairy herds competitions, and the grand total of 1,772 is considerably in excess of the last Bournemouth meeting. The amount of space taken in the machinery and implement department was quite up to the average.

The Council regret to report a reduction in the number of members, the amount received in subscriptions being less than in the two previous years. They trust that in the coming year there will be a marked improvement.

The audited statement of accounts shows a balance in favour of the Society (including the invested funds) of £5,771, which is in excess of any previous year. This satisfactory result is largely due to the warm co-operation of the Bournemouth Local Committee, whilst the military display given by the K Battery Royal Horse Artillery was again a great attraction.

The thanks of the Society are specially due to

his Grace the Duke of Wellington, K.G., who has occupied the position of President and taken the warmest interest in the proceedings of the year; to the Mayor (Alderman Elmes Beale) and Corporation and the members of the Local Committee, who did everything in their power to meet the requirements of the Society and make the show a success; to Mr. Cooper-Dean, for so kindly again placing a site for the show at the disposal of the society; to the Committee of the Bournemouth Horse Show, who readily abandoned their show for the year, and assisted in every way towards the success of the meeting; to the County Council of Hants for their special prizes, and for kindly allowing their staff to assist in the working dairy and the horse-shoeing departments; to the donors of prizes; the judges; the the honorary local secretary; the honorary official reporter; the honorary veterinary surgeons; the Chief Constable of Hants and the Superintendent of Police at Bournemouth; the staff of the Royal Boscombe Hospital and St. John Ambulance Association, and the managers of the railway companies; whilst the Council tender their cordial thanks to the clergy and choir of St Paul's Church, who kindly undertook the special service in the Show Yard on Whit-Sunday, and to the Bishop of Honduras for the most able address he gave on that occasion.

Your Council have to record with the deepest regret the death of Mr. William Newton, Vice-Chairman of the Council, and one of the oldest and most valued members of the Society; of Mr. T. J. Cotterell, who had also for many years been a member of the Council; of Lord Montagu of Beaulieu, who twice occupied the position of President; and of Sir Wyndham S. Portal, Bart., who had for a long period been a Vice-President.

The Council have gladly accepted an invitation from the Council of the County Borough of Portsmouth to hold the 1906 meeting in that town, and they look forward to a repetition of the successful shows which have been held there on several previous occasions.

Mr. W. M. Harris (Chairman of the Council), in moving the adoption of the report and financial statement, said that the report spoke of the Society's connection with Bournemouth last year which had given them the greatest pleasure. They received the support of the Mayor and Corporation and the people of Bournemouth to an extent almost unprecedented. There was only one occasion in the annals of the Society when they had taken more gate money than they did at Bournemouth. (Applause.) The Society had suffered a decrease in membership, but the reason was the depression in agriculture which was experienced throughout the country. He hoped they would work individually in the direction of gaining additional members. The Society was almost unique in holding competitions in regard to dairy herds; the venture had proved most successful and was evidently a move in the right direction. Whereas a few years ago they only had £2,000 in hand, the Society now had a balance of £5,800. While many other societies experienced great difficulty in holding their own he considered that a very satisfactory tate of thing. It howed that the Cousncil were composed of business men, who were backed up by an excellent Secretary in Mr. Franklin Simmons. (Applause.)

Mr. James Stratton seconded, and the report and statement of accounts were unanimously passed.

It was decided to invest a further £800 in Consols as recommended by the Council.

Mr. Harris proposed the election of Sir George Cooper, Bart., as President of the Society for the ensuing year. Sir George was a comparative stranger in Hampshire, but if elected he would do honour to the post and help the Society in every way he could. Sir George was very largely interested in agriculture and was admirably qualified for the post.

Mr. Stratton seconded.

The Duke of Wellington supported the proposition, saying he was quite sure that if they elected Sir George he would do all in his power to further the interests of the Society.

The selection was endorsed by acclamation, and the Duke vacated the chair.

Sir George Cooper thanked them very much for the honour they had conferred upon him, and assured them that he would do all he could to further the interests of the Society. (Applause.)

Mr. A. F. Jeffreys, M.P., proposed a vote of thanks to the Duke of Wellington for his valuable assistance to the Society during the past year. That year had been one of the most successful that the Society had ever had, and the Duke had been one of the best of Presidents. His Grace had attended every meeting, and every member of the Society greatly appreciated having a nobleman like the Duke of Wellington, who not only attended their business meeting, but who conducted them in the admirable way he had done. (Applause.)

Mr. W. M. Harris seconded, and the vote was heartily passed.

The Duke of Wellington replied, and referred to the pleasant way in which they had worked together. That was because they all had the same object in view, which was to benefit agriculture. (Applause.) It had been said that the success of the past year was very much owing to the part he had taken as their President; that might be so to a small extent, but it was in a very much larger degree owing to the whole hearted way in which they had all worked together. They had also received most valuable assistance from their Secretary, Mr. Franklin Simmons. (Hear, hear.) His Grace also alluded to the very hearty welcome they received at Bournemouth. It was a matter of unalloyed pleasure to him to be there and to receive the hearty welcome and hospitality of the local committee; he hoped that before long they would visit Bournemouth again. (Applause.)

Numerous other votes of thanks were passed, and members of Council elected.

English Jersey Cattle.

A special Council meeting of the English Jersey Cattle Society was held at 7, Princes Street, Hanover Square, London, on the 4th inst., the president, Mr. William Arkwright, in the chair. Nine new members were elected, but the business of the meeting was to consider Mr. Richardson Carr's proposition, which had been postponed from the last meeting:—

"To call attention to the prizes given for Jersey cattle generally, with the view to further expenditure of the society's funds in the award of prizes, or in carrying out any suggestion for the furtherance of the breed."

After considerable discussion it was agreed to offer to the Devon County and the Sussex County Societies, both of which had applied for prizes, the sum of £15 each, in three prizes of £7, £5, and £3, for a butter test open to all breeds, provided those societies would give similar amounts for a milk test.

Further business was adjourned until the next meeting, which was left to be arranged early in the new year.

Shire Horse.

Mr. J. P. Cross, president-elect, occupied the chair at the last meeting of the Council of the Shire Horse Society, when seventeen new members were elected.

Mr. R. W. Hudson presented the report of the Finance Committee, showing an available balance at the bankers of £551 15s. 7d.; arrears of subscription, £162 15s.; accounts for payment, £724 5s. 2d. The report was adopted.

For the Editing Committee Mr. J. T. C. Eadie, vice-chairman, reported that applications had been received for the following seven prefixes:—

Prefix.	Applicant.
Astbury	Charles Baker.
Bescar	James Seddon.
Birkholme	J. E. Thurman.
Castalldu	Thomas Williams.
Darlaston	Joseph Harvey.
Lymington	H. Graham Harris.
Toddington	Frank Bishop.

which the Committee granted. The proposal that "all mares having produce registered or eligible for registration in the Stud Book should, in consequence, be eligible for registration and a number," had, after a short discussion by the Committee, been withdrawn by Mr. Edward Green.

This report having been presented and adopted, the secretary stated that, acting upon his instructions from the Council at their last meeting, he had made inquiries and was able to inform them that the statuette of the Shire Horse required by the Natural History Department of the British Museum should be about eighteen inches high, and in plaster coloured to nature. The Council thought it desirable to give publicity to this informaton in the event of any member desiring to take advantage of the suggestion, though the Council felt that the statuette should be limited to stallions that had received the Society's championship at the London Show.

Horse Show Committee

The chairman reported that the following gentlemen had accepted office as judges, viz., Mr. J. T. C. Eadie, Mr. Thomas Green, and Mr. John Rowell. Professor Penberthy had accepted the post of Chief Veterinary Inspector, while from the list submitted by him the Committee had selected the following gentlemen to act as his colleagues, viz., Mr. R. S. Reynolds, M.R.C.V.S., Liverpool; Mr. Frank Aulton, M.R.C.V.S., Tutbury; Mr. J. R. Carless, M.R.C.V.S., Shrewsbury; Mr. Harry G. Lepper, M.R.C.V.S., Aylesbury; with first reserve Mr. George Howe, F.R.C.V.S., Buxton; and second reserve Mr. Sydney Vincent, M.R.C.V.S., Brentwood.

A letter had been read from the Royal Agricultural Hall Company, intimating that, in accordance with the arrangements made with the secretary, the proposal for exhibitors to provide their own sawdust would be agreeable, but on the understanding that every endeavour should be made by the Society to arrange that the sacks, etc., should not be placed in the gangways, but in the horse boxes or stalls. The Committee confirmed their previous decision forbidding the entrance of hay (which was provided by the Society), and they recommended that a supply sufficient for one day's consumption be placed in each box before the exhibits arrived.

In the event of the number of horses exceeding the limit fixed by the London County Council, viz., 700 animals, the second entry of any exhibitor in the same class would be charged at the double fee rate. Various suggestions in respect of the above arrangements had been received by the Committee, but they did not deem it desirable to recommend any alteration in their proposals, viz., that in the event of the total entry exceeding the accommodation at their disposal they would have to cancel the classes for geldings. A proposal from Mr. Forshaw to facilitate the movement of the horses to and from the veterinary yard was favourably considered, and its adoption recommended. This report was adopted.

The Council adjourned till their first meeting in the new year, viz., February 6, after having arranged the dates of their other meetings during 1906.

Hunters' Improvement Society.

Colonel Victor Van de Weyer (President) occupied the chair at the last meeting of the Council of the Hunters' Improvement Society. Five new members having been elected, Colonel G. C. Ricardo (Chairman of the Finance Committee) reported that the balance at the bank on the current account was £148 12s. 2d., receipts since the last meeting £48 14s. 5d., arrears of subscription £28 7s., accounts for payment £200 0s. 3d. The Chairman, in presenting the report, desired to urge upon all members of the society the desirability of using their best efforts to bring the work of the society before their friends with a view to increasing the membership. The report was then adopted.

Editing Committee.

Mr. Romer Williams (Chairman) said that, as the result of the inspections arranged by the Committee at their last meeting, they had been enabled to register two further stallions and their dams in the coming volume of the Hunters Stud Book, and two mares in the supplement. He was pleased to state that the whole of the Hunter Stud Book was now in type, and more than half of it in pages, with the general index practically ready, so that there was every hope of the volume being sent to press by the end of the month. It was hoped to issue it to members early in the New Year.

Owing to representations from several members of the society, the Committee wished to strongly urge upon the Council that notice should be given in the Press and to the members of the society, and to the secretaries of the affiliated societies, that the Imperial Hunter Stud Book and the Irish Hunter Register, published at the Stud Book offices, Boscombe, Hants, and at 10, Gunnersbury Lane, Acton, W., had no conection with the Stud Book issued by this society. Members and others desirous of registering their hunter stallions and mares should send their entries to the Secretary, A. B. Charlton, 12, Hanover Square, London, W., only. The report of the Committee was adopted.

Horse Show Committee.

Mr. J. B. Kingscote (Chairman) reported that a letter had been received from the Royal Commission on Horse Breeding, accepting the society's invitation to hold their 1906 show at the Royal Agricultural Hall.

Letters had also been read from the Royal Agricultural Society, the Royal Dublin and Highland and Agricultural Societies, accepting the offer of the gold medals for award at their 1906 shows.

Replies had been received from the following gentlemen intimating their willingness to officiate as judges:—

Riding Classes.—Mr. R. A. Barkley, Diss, Norfolk; Mr. Alfred West, Bray, Ireland.

Young Stock.—Mr. Thomas Anderson, Mageney, Kildare; Mr. W. H. J. Jenkins, Frenchay Park, Bristol.

Jumping.—Mr. Romer Williams, Newnham Hall, Daventry; Mr. R. G. Carden, Borrisoleigh, Tipperary.

Mr. J. Malcolm, F.R.C.V.S. (Brmingham), had accepted the post of Veterinary Inspector, and from the list of names submitted by him the Committee had selected as his colleagues Professor James McQueen, F.R.C.V.S. (Royal Veterinary College) and Mr. J. J. Ridley, M.R.C.V.S. (Beverley).

The revised edition of the prize list had been submitted by the Secretary and duly approved by them, who confirmed the addition to Rule 18—that as hay was provided free, and accommodation limited, exhibitors would not be permitted to bring hay into the Hall.

An improvement in the prize rosettes suggested

by the Secretary was recommended for adoption, while the reference from the October Council as to the desirability of drawing up a list of judges for the country shows was referred to the Judges' Selection Committee, with a request that they should report fully to the Council in due course. The report was adopted.

Selection Committee of Candidates for Council.

This Committee was constituted as follows:—The President, Mr. J. P. Cross, Mr. C. E. De Trafford, Mr. W. H. Dunn, Colonel Sir Nigel Kingscote, K.C.B., Mr. J. L. Nickisson, and Mr. Romer Williams, to meet on Wednesday, January 10, 1906.

been duly arranged, the Council adjourned till

National Potato.

The general annual meeting of the National Potato Society was held on December 7, in the Prince's Saloon at the Agricultural Hall, Islington, London, N., Mr. G. Gordon, V.M.H., in the chair, and was largely attended.

The Secretary (Mr. W. P. Wright) read the minutes of the previous meeting and the annual report for 1905. The balance sheet showed that the society had a balance on the year's working o £81 11s. Mr. A. D. Hall moved and Mr. Straw son seconded the adoption of the report. Mr. Davie inquired about the die and medals which were charged for on the balance sheet. The secretary explained that certain medals had been awarded to amateurs' or cottagers' societies. The resolution was carried unanimously.

The Secretary brought up the question of unpaid subscriptions, asking the meeting to decide when the defaulters should cease to become members After some discussion Mr. Hall moved that such members be allowed a year's grace; this was seconded by Mr. Fred Pickering and carried unanimously.

Mr. W. Cuthbertson proposed that the officers, committee, and board of arbitration as given in the Schedule be re-elected *en bloc*. This was seconded by Mr. F. G. Crampton and carried unanimously.

On the motion of Mr. Davie, Mr. J. Gray, of Osborne Street, Glasgow, was elected to the Board of Arbitration, the members of which were given votes on the General Committee.

Messrs. W. Cuthbertson and W. J. Malden were unanimously elected as joint honorary auditors.

Mr. A. D. Hall opened a discussion respecting the society's trials during 1906. He suggested that the society should enter into an agreement with the Cambridge University agricultural department. The secretary stated that he had seen Professor Middleton on the subject, and this gentleman had given an encouraging reply. Mr. G. Massey, Mr. T. J. Blaydes, C.C., Mr. R. W. Green, and Mr. T. A. Scarlett supported the scheme. Several members spoke very highly of the Cambridge trials of 1905.

Mr. T. J. Blaydes suggested that the various county councils might take the matter up. Mr. Scarlett moved that the department be approached formally; this was seconded by Mr. George Massey, who stated that his county council were doing nothing whatever in the way of experiments. Carried unanimously.

The Secretary moved that the maximum charge for testing any one variety be 10s.; this was seconded by Mr. Cuthbertson and carried unanimously.

The Secretary suggested the appointment of Mr. G. M. Taylor, of Pinkie Hill, Inveresk, as honorary assistant secretary for Scotland. Mr. Scarlett made a formal motion to this effect which Mr. Davie seconded. It was carried unanimously.

Metropolitan Dairymen's Benevolent Institution.

Founded in 1874 to provide relief for the poor, aged, and afflicted but deserving members of the dairy trade, as well as the orphans and widows of deceased dairymen, the Metropolitan Dairymen's Benevolent Institution has at the present moment thirty-six pensioners on the register, and during the past year gratuities of from £10 to £18 have been granted to several persons whose urgent necessitous circumstances were brought before the committee. Special emphasis is laid on the fact that no lavish expenditure in almshouses or other costly accessories is incurred.

Mr. Frank Denning, managing director of Welford's Surrey dairies, who occupied the chair at the recent annual meeting, observed that recently a learned divine gave utterance to the sentence, "Let us do good to all, but mainly to those of our own faith." Would they allow him to remind them that while they should do good to all, they should especially do good to those who had been engaged in the same trade as themselves. This appeal was most liberally responded to, the subscriptions, etc., amounting to £1,682 9s. 6d. Mr. Denning gave £105.

National Sheep Breeders.

The annual meeting of the National Sheep Breeders' Association, under the chairmanship of Mr. J. T. Hobbs, took place at the Agricultural Hall during the Smithfield Show.

It was reported that the Council had passed a resolution expressing the opinion that the time had arrived when it should be a condition of entry at the Royal Agricultural Show that all sheep entered for competition in the pure-bred classes should be either entered or eligible for entry in their respective flock books, and that the Council of the Royal be asked to make a rule to this effect.

Mr. Mansell said it had been pointed out to him that the resolution might work wrongly, for all flock books were not closed. He proposed that the four words "or eligible for entry" be omitted.

Mr. A. Amos seconded.

During a discussion it was explained that the resolution could not be amended without notice, and, consequently, the resolution passed as submitted. The opinion was also expressed that the Royal Society had already taken action in the matter.

A resolution had also been adopted by the Council that the judges appointed to award prizes in all pure-bred classes should be selected by the Councils of the agricultural societies from gentlemen nominated by the respective sheep societies.

It was further reported that a strong representation had been made to the Board of Agriculture pointing out the great inconvenience arising through the disease of sheep scab being allowed to continue in this country, and urging them to take the most drastic measures for its entire eradication.

Mr. J. Flower, of Chilmark, Salisbury, was chosen president-elect for 1906 and president for 1907.

Highland.

The Directors of the Highland and Agricultural Society met at Edinburgh on Wednesday week. Mr. Wilson, of Carbeth, presided, and, before the business of the meeting was commenced, referred to the death of Mr. Cameron, of Lochiel, in whose death, he said, they had lost an old and valued member, who had been connected with the society for forty-six years, and had been in turn a director, a vice-president, and president. They mourned the loss of one who had done his duty abroad and at home right loyally and well. He moved that they record in their minutes an expression of deep regret at Mr. Cameron's death, and their sense of the loss which the society had sustained. The motion was unanimously agreed to.

The report of the Shows Committee on the premium list for Peebles Show next year was submitted. It showed that the prize money offered from the society's own funds amounted to £2,546, as compared with £2,479 at Kelso in 1898 and £2,804 at Glasgow last year. The following special prizes were intimated:—By the Polo and Riding Pony Society, £15, to be applied in increasing the first prize in each of the three classes for Highland ponies to £10; by Mr. M. G. Thorburn, of Glenormiston, £50, divided as follows:—£40 towards the prizes for Cheviot sheep, £10 for prizes of £5, £3, and £2 for pens of cross-bred lambs in class 113, got by blackfaced tups and out of Border Leicester ewes; by Peebles Co-operative Society, Limited, piece of plate, value £10, for best pen of half-bred sheep; Mr. Charles Howatson, of Glenbuck, offered £10 as a champion prize for the best blackfaced ram in the show, any age.

The Secretary (Mr. James Macdonald) intimated that the secretary of the Royal Commission on Motor Cars had written inviting the society to appoint a witness to give evidence by November 28. He had written that they would not have a meeting before that date. Thereupon the secretary wrote stating that the Commission would be glad to receive a short note of the evidence their witness would be prepared to give, and that they would then communicate further with the society if they desired to do so. That he (Mr. Macdonald) took to mean that it would depend on the evidence to be given whether they would receive the witness or not. The Glasgow Agricultural Society and the Scottish Chamber of Agriculture were, he understood, sending witnesses.

Mr. Mair, Upper Mill, Aberdeen, said he was afraid their was a danger of the views of agriculturists not being sufficiently prominently brought before the Commission, and that the views of those who were more insistent on having their way might have undue prominence. He thought they should take some steps to defend their birthright—the free and unrestricted use of the roads—otherwise their liberties would be encroached upon. He thought they should have somebody to present the view of the Highland Society. There ought to be stringent restrictions put on those motor cars, both as to speed and as to passing over narrow roads.

On the motion of Mr. Anderson, Kinross, Mr Mair was appointed to give evidence, but, on the suggestion of the chairman, it was agreed not to act on the letter of the secretary of the Commission, but to say that they had appointed a witness, and that when they learned that his evidence was to be taken they would send his precognition.

Grants to local shows amounting to £665 were approved. This is an increase of £25 over last year, about double the grants in 1901, and £440 more than they gave twelve years ago.

Large Black Pig.

The annual general meeting of the Large Black Pig Society was held in the Princes Saloon of the Agricultural Hall on Wednesday of Smithfield week, when, in the unavoidable absence of the President, the Earl of Onslow, the Vice-President, Mr. C. F. Marriner, was voted to the chair.

The seventh annual report and statement of accounts for the year ending June 30, 1995, showed that during the year twenty-four new members had been elected, and the total number of members was now as follows:—Life members, 1; annual subscribers, 213. The statement of accounts showed credit balances amounting to £141 16s. 5d., and a surplus of £122 10s. 11d., after payment of all liabilities. The sixth volume of the Society's Herd Book, containing entries of boars, Nos. 1,085 to 1,325, and of sows, Nos. 4,198 to 4,870, had been issued, and a considerable number of entries had already been received for the seventh volume. The export trade had increased and considerable shipments had been made to Australia, New Zealand, Denmark, Germany, Russia, South Africa, and the United States of America. Several purchases had been made for Ireland, and extensive business might be done with that portion of the United Kingdom if it were not for the almost prohibitive restrictions enforced in respect to the importation of pedigree swine. Appended to the report were the names of officers of the Society and members of the Council retiring by rotation.

The President, in his letter of apology for his inability to be present, said he was very glad to hear that the Society was doing so well.

The Chairman said he was desired to express regret that Mr. H. G. Regnart could not attend the meeting that day. The Secretary had requested him (Mr. Marriner) to express regret that there were not more exhibitors at Smithfield Show this year. As he (the Chairman) was one of the defaulters, he felt that he was in rather an awkward position. He personally wished he could have sent more, but he really had not the opportunity, owing to the demand there was for Large Blacks. It was very satisfactory that there was such a good trade; they had not only been sent to more home countries, but to more countries abroad than previously. This growing popularity of the Large Blacks was very encouraging, showing, as it did,, that the demand for that special class of pig was becoming greater year by year. (Hear, hear.)

The Secretary remarked that there was a good representation of the Large Blacks at the summer shows, but he thought they had not done justice to the breed at the Smithfield Show. He confessed, for his own part, that he should have been glad to have seen more entries. He might call attention to the remarkable success of the Suffolk sheep in the carcase competitions there; out of the twelve money awards, as many as eleven going to Suffolks and Suffolk crosses. He felt convinced that if there had been more exhibits of Large Blacks in the pig section they would take a like prominent place.

New members to the number of about a score were elected.

Some time was occupied in considering the grants of premiums, etc., to the Royal and other societies for 1906, and a list of judges of Large Blacks for recommendation to agricultural societies in 1906 was approved.

Presentation to a Secretary.

An interesting gathering took place at Reading on the 9th inst., when about 40 members of the Berks and Adjoining Counties Dairy Farmers' Association entertained to dinner Mr. Thomas Chettle, the Farm Steward to the Reading Corporation, who is their hon. secretary, and at the same time made to him handsome and suitable gifts in recognition of his services in the promotion of the Association and the union among dairy farmers in the promotion of their common interest which it has brought about. The presentation took the form of a gold watch and chain, and a framed illuminated address. The address read:—"Presented by the Members of the Berks and Adjoining Counties Dairy Farmers' Association to Mr. T. Chettle, with the accompanying Watch and Chain, in recognition of the valuable services he has rendered the Association as Honorary Secretary since its inauguration, November, 1901." Then followed the names of the subscribers, over 65 in number.

W. S. BROOKES,
Plumtree Lodge, Bawtry.

CHANGE OF SEED

always increases and sometimes doubles the crop.

The Potato benefits more than any other crop by the introduction of FRESH SEED.

This year has again proved the necessity for English growers changing their Potato Seed from Scotland.

The Seed I offer is grown on the high lands of Fifeshire, and from that district they always do well. Most of the new, and all the older, varieties I have grown and tested, and will be pleased to give advice as to what kinds are likely to suit the different soils, &c., and give best results. I have also tried Findlay's latest. These have done exceptionally well.

HOME AND EXPORT.

COLQUHOUN'S

Scotch Tweeds & Knitting Yarns.

To the Public.

Scotch Tweeds mean value, and Colquhoun's Ladies and Gentlemen's Scotch Tweeds, Knitting Yarns, Blankets, &c., mean perfection of value. Their wear is magnificent. All goods are made in my own Mills under my own supervision, and nothing is sold as wool that is not pure wool. Any length at Mill price and carriage paid. Self measurement forms sent, and Suits made up if desired. 400 Patterns, post free. Write for them.

To Wool Growers.

What do you do with your wool? Do you make the most of it? One thing is quite certain. You cannot do better than send it to my Mills and have it made into woollen cloth, blankets, or other goods. I have 400 patterns to select from, and pay carriage on wool sent to me for manufacture. Write for booklet, which tells you all you want to know, and receive patterns, so that you may say what you want made and the patterns you prefer.

"Cakettes" FOR Cattle

(Bibby's Patent).

No Trouble. No Waste.
No Extra Cost.

BIBBY'S NEW METHOD of Manufacturing Feeding Cakes.

It has been our good fortune, from the commencement of our business career, to have led the way in the production of high-class Feeding Cakes; and our "BIBBY" CAKE, BIBBY'S FEEDING CAKE, and BIBBY'S DAIRY CAKE, with their corresponding Meals, have now for many years taken the first place in popular favour.

We have recently taken another step forward, and have invented a process by which the Feeding Cakes can be turned out in the form of "Cakettes," as shown in our illustration; it is obvious that this improved method of manufacture will save a good deal of time to the Feeder—and what is more it costs him nothing.

So excellent an innovation has attracted the attention of a great many Cake users, and naturally more or less plausible imitations of our "Cakettes" are beginning to loom on the horizon.

We do not complain of this in the least, so long as the Feeder knows exactly what he is buying; for no one is quicker than he at discovering the difference in value between an original piece of work and a more or less successful copy. For the same laws obtain in commerce as in art; and all artists begin by copying the work of the masters in the craft.

But a caution is necessary; no connoisseur of art expects the same perfection of detail in a copy as in the original picture; and a user of Feeding Cakes, when buying an imitation of our "Cakettes," should not conclude therefrom that he is getting a Cake of our quality.

We have been catering for many years for those Feeders who demand—and who will have—

The Best Feeding Stuffs the Market affords;

and we maintain a staff of Chemists and an Experimental Farm, researching all the time after improvements in all directions; and it must be manifest to all that this line of policy is bound to yield the best results obtainable, a fact which any observant feeder will discover for himself if he make careful tests.

We may add that all the most approved methods of producing Cake in this form have been patented by us, and not only is the quality of our "Cakettes" the result of years of the most painstaking research, but the pieces themselves are more regular, shapely, and more satisfactory in every way than can be otherwise obtained.

We have, therefore, thought it but right to bring these facts under the notice of feeders, so that buyers who really want our "Cakettes" may not be put off with an imperfect article, and particularly as the genuine thing can be had at the same price.

We have registered the word "Cakettes" to describe the results of our improved method of manufacturing Feeding Cakes; and buyers who want our "Cakettes" should see that the word "Cakettes" is plainly marked on the bags, as shown in our illustration. If the word "Cakettes" is not on the bags, and you have been sold something "Just as good," we recommend that a practical experiment be made to test the quantity and quality of the milk which they severally yield, for the stomach of a cow is a handy and reliable chemist; and the more the farmer submits the claims of rival Cakes or Meals to practical tests of this kind, the more careful will he be to select the original article, however plausible a copy of it may be recommended to his notice.

For further particulars, with delivered prices, please apply to our local representatives, or direct to the

WIREWORM MEANS POOR HARVEST

Your land is of little profit if it is infested with wireworms. Kill them with VAPORITE, which acts in a very simple way. When ploughing, you scatter it broadcast on the ground. VAPORITE gives forth a powerful insect destroying gas. That's death to all ground insects. It rids you of the pest that literally eats into your pocket. Send for our VAPORITE booklet, it's full of interesting things.

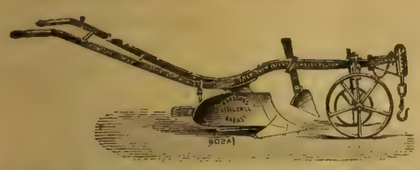
RHEUMATISM.

BLAIR'S GOUT PILLS.

The only remedy that relieves and cures all Rheumatic complaints. Sure, safe, and effectual. All Chemists and Stores.
1/1½ and 2/9 per Box.

By Royal Warrant Manufacturers of Agricultural and Horticultural Machinery to His Majesty King Edward VII.

PLOUGHS AND CULTIVATORS

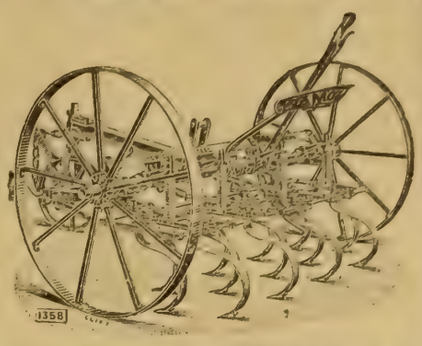


TO SUIT EVERY REQUIREMENT.

GENERAL PURPOSE PLOUGHS.
CHILLED DIGGING PLOUGHS.
RIDGING PLOUGHS
ONE-WAY PLOUGHS.
2 & 3 FURROW PLOUGHS

CULTIVATORS

For General Purposes, Small Holdings, and of "Triplex" Type.
i.e., Combined Cultivator, Hoe and Ridger.



Complete Illustrated Price Lists free on application to—

RANSOMES, SIMS & JEFFERIES, Limited, Orwell Works, IPSWICH.

CHAMPIONSHIP OF THE WORLD for the fourth time, 1896, 1900, 1903, 1905, Brewers' Exhibition, Agricultural Hall, London.

The Championship of the World has again been awarded to Barley grown with Joseph Fison & Co.'s Extra Quality Barley Fertilizer, by Mr. C. G. Miles, Alburgh, Norfolk. For full particulars of Fertilizers for Wheat, Oats, Barley, Beans, and Grass, write to—

JOSEPH FISON & CO., LTD.,

Chemical Fertilizer Manufacturers to H.M. the King, IPSWICH.

ESTABLISHED 1832.

DECEMBER 25, 1905.

Correspondents are requested to address all communications for the Editorial Department to THE EDITOR, "Mark Lane Express," 3, Wellington Street, Strand, London, W.C.

Subscription rates (including postage).—In the United Kingdom: one year, 15s.; Six months 7s. 6d.; three months, 3s. 9d. The Colonies and Abroad: one year, 17s. 6d.; six months, 8s. 9d. Cheques and postal orders to be made payable to the Publisher.

Advertisements, Subscriptions, and business communications should be addressed to THE PUBLISHER "Mark Lane Express" 3 Wellington Street, Strand, London, W.C.

PILFERED CORN.

An evil with which farmers have to cope, especially in the wold districts of Yorkshire and Lincolnshire, is the mistaken ambition of waggoners and other farm servants to improve the appearance of their teams by the injudicious administration of drugs or feeding stuffs to the horses under their charge.

The law has attempted to guard against the danger by two enactments—viz.:—

(a) That any person wilfully and unlawfully administering to or causing to be administered to or taken by any horse, cattle, or domestic animal, any poisonous or injurious drug or substance (unless reasonable cause or excuse is shown on his behalf) shall be liable to a penalty of £5, or imprisonment with hard labour for not exceeding one month for a first offence, or three months for any subsequent offence.

(b) That if any servant shall, contrary to the orders of his master, take from his possession any corn, pulse, roots, or other food for the purpose of giving the same, or of having the same given, to any horse or other animal belonging to or in possession of his master, he shall be liable to imprisonment with hard labour for not exceeding three months, or to a fine not exceeding £5.

Thus the law regards the misappropriation of the master's corn as a more serious offence than the wilful and deliberate administration of injurious drugs, the maximum imprisonment for a first offence in the latter case being one month, whilst in the former three months' imprisonment may be imposed.

But, notwithstanding these provisions, we constantly hear of cases of very serious injury being done to stock by misguided farm hands "doctoring" them by surreptitiously dosing them with arsenical compounds or by administering food of an unsuitable nature, or in excessive amount. When the mischief is done the servant realises his folly, and is unfeignedly penitent, the actual result of his operations being the very reverse of what he had intended. So far from being actuated by any spite or ill-will against his master or by any felonious intent the man's conduct is nearly always prompted by a laudable pride in the appearance of his horses, and he deeply regrets that any harm should happen to the animals, of which he is genuinely fond. Recognising that the servant's offence proceeds rather from an error of judgment than from an evil mind, the farmer often forgives the injury done to him, and so it happens that although these cases are of too frequent occurrence, they do not often come into court.

But sometimes the damage done is so appalling that it is felt to be due to the public that a prosecution should ensue, in order that farmers and others may be protected against these unauthorised practices on the part of their servants, and that the dangers lurking therein may be emphasised for the enlightenment of those who are tempted to indulge in them. Of such a nature was a case which recently occurred in the East Riding of Yorkshire, resulting in the death of five valuable mares, worth not less than £300. A waggoner who had the absolute charge of these mares one day last October found some wheat in the barn, some of which he took (without authority) and gave to his "beauties" for a treat. Now, as luck would have it, that wheat was the remains of some seed wheat, which had been subjected to an arsenical process with a view of being sown. This was quite unknown to the waggoner, who, of course, would not have used it had he suspected for a moment that it had been treated. At the same time, he had no business to have taken it, and he was properly convicted of misappropriating his master's corn. The punishment inflicted—a fine of £3 and costs—would doubtless have been heavier but for the carelessness of leaving the poisoned corn unprotected in a place where it was liable to be used for an improper purpose. The Bench commented upon this carelessness, and remarked that the poisoned wheat should have been protected, and so placed that it would have been impossible for a servant to get at it.

This case has attracted a good deal of attention on account of its disastrous results, and the prosecution was taken up as a matter of public importance by the Bridlington Agricultural Club, of which the farmer was a member. The Club have also adopted a resolution urging that the law should be strengthened by making it an offence for servants to give, contrary to their master's orders, any foods or other substances to horses or other stock, whether such foods be the property of their masters or not. At present the Act only deals with misappropriation of the master's feeding stuffs, and not to the administration of foods which the servant may get elsewhere.

New House Farm, near Felton, was the scene of a very destructive fire on Tuesday night and Wednesday morning. It was first discovered by a farm hand about nine o'clock in a straw barn, and owing to the scarcity of water and want of implements wherewith to combat the flames the fire had practically to burn itself out. The flames spread from the barn to the granary and then to the threshing room. In the former place a large quantity of oats, oilcake, and barley was destroyed. In the threshing room there was great havoc, the engine and machinery being absolutely destroyed. A good many of the cattle which were in a field contiguous to the burning building were got into safety, and about thirty bags of potatoes were also saved from destruction. The farm is tenanted by Mr. Thomas Heath. The damage is estimated at something over £1,000, but is covered by insurance.

Seasonable Topics.

Christmas.

A merry Christmas! As these lines are being written the old wish is being passed from lips to lips, and we hope also from heart to heart, just in the old sweet way, and preparations are being made for the Yule-tide feast. Times, manners, habits, customs, and fashions all change as the years roll on, but the true spirit of Christmas is a thing of itself, and remains unchanged and unchangeable. And the man who is never infected at all by the spirit must be a veritable Scrooge indeed, for even the individuals who boast that they are devoid of sentiment, seem to creep out of their shells a little at Christmas time, become a trifle generous, and slightly sympathetic, while the man who loves his Christmas and believes in it, rejoices in making those about him glad and happy. It is good to be with such a character as this at all times, and particularly just now, for when he wishes you a merry Christmas you may depend that it is no figure of speech, but he really means it, and if it is in his power to make your Christmas a little more bright and happy he will find pleasure in doing it. Indeed, the world is made a much better place through the presence of the good men who live in it, and they shine at Christmas time.

Christmas Then and Now.

Look at the old picture hanging on the wall, or plates in the Christmas numbers of the illustrated magazines (which usually come out six weeks before the time and are stale by Christmas) and you are reminded of what is known as an old-fashioned Christmas—a season of frost and snow, when coaches had to be dug out, and all sorts of more or less exciting things happened; in fact, a real Dickens's Christmas describes it as well as anything. Now look out of the window and you survey not frost and snow, but muddy roads, green fields, and a more or less damp and murky atmosphere. Did they have these green Christmases, which according to some dead and gone authority, make fat churchyards, in the old days, we wonder, and is the ideal snowy and frosty Yuletide one of imagination's own making? So far back as our recollection goes, we remember more mild and muddy Christmases than those of the real old-fashioned story-book character, and perhaps after all the modern Christmas is the most convenient, for, with all the thousands of people who travel to visit friends and relatives at this season, to say nothing of the parcels and post traffic, it would be very awkward, indeed, if trains had to be dug out to enable passengers to reach their destinations, and postmen bringing the greeting cards had to be extricated from snowdrifts. On the whole, we think that the old-fashioned snowy Christmas is better on the pictures and coloured plates than in reality, bearing in mind the requirements of the people of this modern age, because Christmas is not only a season of pleasure, but one when an enormous amount of business is done.

The Farmer's Christmas

Farmers have always done their share towards upholding the spirit of Christmas, and the convivial tendency which belongs to the fraternity betrays itself at this season. Through all the ages farmers have been a hospitable people, and this characteristic is as marked now as ever it was. Christmas, of course, is a time specially set aside for hospitality, and the farmer, as Mark Tapley would put it, has a chance of coming out strong. For years we have been, as it were, one of the fraternity, and recollection wanders to a dear old portly farmer's wife of the old school, with an apple face and cheerful smile, who always made a special brand of pork pies for Christmas presents, and never failed to rear half a dozen turkeys and the same number of geese for the same express purpose. Woe be to the member of the household who dared have put a peg or tap into the special keg of Elderberry wine before the Eve of Christmas, and it would have been counted as an insult by the homely dame if any visitor had refused a glass of the wine and a Christmas mince pie. Don't think this spirit is dead; not a bit of it, for farmers still live in a world peculiarly their own; they give and take in the same open handed manner, and the old-fashioned custom of entertaining each other at evening parties is still carried on during the Christmas season. Particularly is this so in districts far removed from towns, where the population is sparse and chiefly made up of members of the farming fraternity.

Christmas Customs.

Naturally a good many of the old rural customs associated with Christmas have died out or nearly so, for railways and other means have brought the country more into contact with the world of the town, and the rising generation does not show the same interest in the amusements which delighted the youth of a past decade. We have in mind an old farmhouse in a Midland shire which was liberty hall at Christmas time. The carol singers on Christmas Eve which came from the Methodist chapel were just as welcome as those associated with the Established Church, and it was said of the band of local musicians that their gait was invariably less steady after a visit to the establishment in question. Recollections still live in the district of the famous brew of "posset" which was boarded on Christmas Eve, and which every labourer on the farm shared, while the old kitchen re-echoed with laughter and song. It was customary then for "Morris dancers" to go round, and it was their privilege to step into the kitchen, tapping with their sticks and keeping time to the tune of Yankee doodle, played on a tin whistle or a squeaky concertina. After them would come a company of play actors in the form of village lads, who, dressed up in grotesque attire, used to go through some unintelligible jargon, in which Earl Guy and various other notabilities figured more or less conspicuously. No one knew the origin of the play, but probably it was a distorted bit from Shakespeare, and one generation of schoolboys learned it from another; the rural people dropped coppers into the tin ladle carried for the purpose as a matter of custom, and perhaps they do still for aught we know.

Changing Farm Servants at Christmas.

In the well-known dairy farming district of North Staffordshire and Derbyshire the farm servants' year ends on Christmas morning, and even if the youths and maids are "stoppin' agen," as it is locally put, they leave their places on the morning of Christmas Day and return on New Year's Day. Perhaps this time for terminating engagements was selected originally because the cows were mostly dry, and cheese making for the time being was at a standstill. Alas! in many cases cheese making now appears to be at a standstill for ever, because the milk trade has superseded it, but still the dairymaids (what few there are left) and the farm lads who live on the premises, shoulder their bundles on Christmas morning and trudge off, in some cases for a week, and in others for ever, but with the intention during the next few days of getting as much pleasure out of life as they can. During the week dividing Christmas and the New Year hiring fairs, known locally as "Gauby's markets," are held in the market towns, though these meetings of late years seem to have become pleasure fairs more than anything else, as not nearly so much hiring is done as used to be the case. Farm lads in the Midlands work hard during the greater part of the year, and for the most part they get but little excitement; therefore at Christmas it is not surprising that they make the most of their opportunities. Evidently they do not stand alone in this respect, for it may be observed at the Christmas hiring fairs that cheapjacks and purse trick experts do a roaring business, and invariably succeed in appropriating a goodly share of the farm lads' hard-earned money.

The Mystic Mistletoe.

Though mistletoe growing in an apple tree is not indicative of high class fruit culture, yet many of the farmers in the West of England look to the parasite which flourishes in so many of the orchards as a means of returning them a little profit. Very closely is the mystic mistletoe connected with the festival of Christmas, even more so, in fact, than the time-honoured holly, and it seems to lose none of its popularity, judging by the tons of it that are sold every year. Though poplars, limes, and hawthorns are favourite hosts of the mistletoe, it seems to have a particular liking for the apple, and on this tree it grows abundantly. Mistletoe rarely grows on the oak, and the Druids of old held a specimen on an oak as sacred. The cutting of it was done with a golden knife, amid great ceremony, a white bull being secured to the stem of the tree during the operation ready for the sacrifice. After the sacrifice was made feasting followed, and it is with Yuletide merrymakings that the mistletoe has continued to associate itself. Birds are the chief propagators of mistletoe, as they eat the berries, and in wiping their bills on the branches of trees the bruised berries with the seeds become affixed by means of the sticky gummy matter they contain, and in due time the seeds germinate and take root. Though an up-to-date commercial fruit grower would not tolerate mistletoe on his apple trees, there is something old worldly and peculiarly sentimental about the big bunches of the parasite which flourish on the gnarled orchard trees in the west country.

The Crossing of Grains.

An interesting lecture on the above was delivered on Wednesday by Dr. John H. Wilson (Lecturer on Agriculture at St. Andrew's University), under the auspices of the Glasgow and West of Scotland Agricultural Discussion Society, at Glasgow. Dr. Wilson, in the course of his lecture, said it was necessary to get a clear idea of what was meant the successful application of pollen of one kind of a plant to another, resembling in the blending of the character of both kinds. In cross-fertilisation the action version took place, and for every three plants was confined to one plant, or to two plants of the same kind. Much discussion had taken place regarding the possibility of cereals crossing naturally. This was very unlikely to happen, but instances of it had been recorded. The individual flowers of cereals fertilised themselves in ordinary circumstances.

In crossing it was necessary to take means of preventing self-fertilisation. The lecturer had crossed oats, wheats, and barleys, one variety with another. A black oat crossed with a white one resulted in the first generation in a brown-grained variety, but in the second generation reversion took place, and for every three plants bearing black or brown grains, one bore white grains. He found that the white ones bred true to colour, but the others did not, some white ones appearing amongst them.

The result was in conformity with Mendel's law of inheritance of individual characters. By giving attention to this law the breeder was able to see which varieties were fixed or constant. Amongst the wheats, a cross between a bearded and a beardless variety gave a blending of the two at first, but the progeny of the hybrid could be separated distinctly into two groups, one beardless and the other bearded, the former being three times as many as the latter. Those representing the smaller term of the ration bred true, all being bearded.

The length of the ear was another character following Mendel's law, the long-eared type breeding true to that type. A cross between barley and bere was interesting on account of certain of the derivatives resembling the barley parent in form, but possessing the early character of the bere.

Sugar Beet Cultivation.—At a meeting of the Council of the East Suffolk Chamber of Agriculture, held at the Town Hall, Ipswich, on Tuesday, it was decided to hold a meeting to consider the growth of sugar beet in Suffolk, on January 2. Mr. E. J. Cheney promised to introduce the subject for discussion, and an influential company of persons interested in the subject either as growers or manufacturers, is expected. It was decided to postpone the annual meeting and luncheon until February.

York Horse Fair.—The York Christmas Horse Fair nominally started on Monday, but, so far as the best stock is concerned, was in full swing on Saturday. There was a good demand for hunters, and the best trade was for Irish hunters and coach horses. A good many well-known Irish breeders were represented. Compared with former fairs, the supply is moderate and buyers are fewer, though several well-known Continental agents are present, and were extensive purchasers on Saturday. Prices for both hunters and harness horses ranged from 150 guineas downwards; for carriage work some well-matched pairs changed hands at 150 gs. and 160 gs. On Monday the best of the hunters and harness horses left over from the preceding days of the fair made as much as 125 gs., but the greater part sold at prices ranging from 50 to 90 gs. One of the features in the trade for harness horses was the decline in the demand for the stronger and more wearing type, the demand being chiefly for stylish lighter type suitable for town and short distance work. Agricultural horses ranged from 45 gs. downwards, though anything good in Shires up to heavy railway lurry work would command as much as 70 gs. Hackneys sold up to 50 gs., but there were very few which reached this figure.

CHANGE OF ADDRESS.

Will readers kindly note that we have removed to larger and more convenient Offices and that in future our address will be—

3, WELLINGTON STREET,
STRAND, LONDON, W.C.

Telephone—3665 Gerrard. Telegrams—"Certitude, London."

Agricultural Politics.

BY A LOBBYIST.

Of course, we have now reason to be gratified over at least two of the minor appointments to the Ministry—that of Mr. George Lambert to the Civil Lordship of the Admiralty and that of Sir. E. Strachey to the Treasurership of the Royal Household and the representation of the Board of Agriculture in the Commons. Of course, I have more than once suggested that Mr. George Lambert was too prone—too prone for his own advantage—to roam at large in the political sphere from Dan to Beersheba. At the same time, I had never imagined him likely to be a Minister in administrative charge—for that is what he will become in a larger degree—of the naval establishments and the naval factories. I had perceived in him, in his stern interrogatories of the Minister for War, a chivalrous readiness to, in the hour of stress, take charge, if deemed necessary, of the British Army. This was particularly evident after his return from garrison-service during the war with his Militia regiment. I had never, however, perceived that he had so far devoted his attention to the Navy as to know the difference between a marling-spike and a boarding-net. I see that some Devonshire Conservative commentators have made great fun over the appointment. "So like C.-B.," say they, "to send a man who knows all about agriculture to the Navy." He was afraid of what Mr. Lambert would propose at the Board of Agriculture." This is simply grotesque silliness. There can be only one Minister for Agriculture, and C.-B. gave that to the Peer who has devoted a scientific sympathy to the interest, and whose inclusion in the Cabinet was absolutely necessary. There could be only one spokesman for the Ministry in the House of Commons; and C.-B. have given that dignity—to which in itself no remuneration attaches—to a Somersetshire squire and politician whose claims are undeniable.

• • •

Of course, none of us can command our partisan sentiments; and this criticism of Mr. Lambert's appointmnet was simply a partisan ebullition. When I heard of it I could not but reflect upon Mr. Hanbury's first appointment to the portfolio of Agriculture, when the Tory party had actually at its command Mr. Henry Chaplin, Mr. Walter Long, and twenty other able men connected with agriculture. If a man is only to receive the appointment for which his predispositions and past suggest him—and, of course, we must all confess that this would be the ideal plan—then how was it that that dainty Greek versifier, Mr. Gerald Balfour, was placed by his brother in control of the dreary drudgery of the Board of Trade? No doubt, too, the present Marquis of Salisbury is a man of competent ability; but what had there been in his past to justify his succeeding Mr. Gerald Balfour in his dull and drab unromantic significance? I would opine that no trading-house in the British-speaking world wosld for a moment have thought of consulting either gentleman on a matter of trade polity, or for less than a moment pursuing their advice before their appointment to the position. Hence it is that this criticism of Mr. Lambert's appointment is only an evidence of the desire of the instinct within us — it is as inevitable to us as is the double dose of original sin—to flagellate our political rival whether we be justified or not. There can be only two agricultural appointments in the Ministry — the Minister himself and his spokesman in the other House; and two agriculturists have been associated with it. The appointment of a third distinctive agriculturist to a Ministerial position may not be the result of a designed anxiety to distinguish agriculture; but, at least, under the circumstances, it is a considerate act which is deserving of courteous recognition. If Mr. Lambert had been the selected spokesman of agriculture in the Commons, Somersetshire would have wanted to know what Sir E. Strachey had done.

• • •

It will be interesting to see what attitude Sir E. Strachey adopts towards the question of railway rates, and whether he will be still in favour of coercing companies into abandoning excessive demands. You will remember that the policy he once suggested was a bit draconic. This was that the House of Commons should refuse to assent to the private Bills of railway companies — Bills, for instance, providing for the extension of a line, the building of light railways, and the like—until a formal and definite revision of the railway charges had either been promised or undertaken. In my view, this policy was justifiable. Every railway in the country owes its existence to the State. Had the State withheld its approval, the line could no more have been built than a narrow-gauge connection could be established with Mars. Hence the State was in a measure responsible for the policy of the company. Or, at all events, if that the company unduly penalised a section of the community, if by that policy it gave an advantage to its rivals, the State should, on the first possible opportunity, exact redress and possibly retribution. "Drastic, drastic," quoths the commentator. Nothing of the kind. The proposal of Sir E. Strachey seemed to be the common-sense assertion of the undeniable right of the State; and, though the State was not, as a result of his action, called upon to exert its powers, the mere suggestion that it could invoke them had its influence. Will Sir E. Strachey maintain his bold, punitive attitude?

• • •

Probably there is not so much necessity for this attitude now as there was when he first adopted it. Still there is very much yet to be obtained from the railway companies. Perhaps, too, it may be the easier to obtain these concessions when the companies believe they will be acting in harmony with a friendlier State. By "friendlier" I mean "subventing." Will Lord Carrington seek to unloosen the nation's purse-strings in the interest of the British farmers—in the interest of improved means of distribution?

• • •

Will Earl Carrington have the strength to resist the demand which is already being revived to remove the restrictions upon the admission of Canadian cattle? The attitude—the pawky attitude—which Sir Henry Campbell-Bannerman adopted in his speech to the Scottish fleshers is now being interpreted to be an encouragement to at once proceed with the organisation of all forces interested in the policy of removal. It would assuredly be a strange, almost weird, contrast if restrictions devised to prevent the spread of disease among British flocks and herds were removed at the instigation of interested personages, at the very moment when, in the interest only of her own trade, Canada was putting in force restrictions against the introduction of American agricultural produce into the Dominion. Of course, one of the assertions which it is hoped will influence Lord Carrington is that his exclusion of Canadian cattle must tend to the heightening of the price of the food of the people. Of course, the cheapened food of the people is now the Ark of the Radical Covenant. Well, Lord Carrington is, temperamentally, an unemotional man. He does not act upon impulse; neither does he think that because a fellow has leather-lined lungs he voices the requirements of divine Providence. I should opine that he would not for a moment think of hastily reversing the policy of his predecessor until he had consulted the expert advice at the command of the Minister of Agriculture. If he does this, we may assume that reversal will not take place just yet. Agricultural opinion in England, at this moment, is entirely with the policy of exclusion. "Oh, yes," retorts the restriction-removalist, "because this restriction is simply another form of Protection." Well, as a fact, it is not in harmony with the new policy of Protection based on Colonial preference. But the farmer is moved by a very different sentiment. He has a morbid fear of a ravaging disease—and his fear is justified. Lord Carrington's first problem is not without its personal difficulties, as a great body of his political associates undeniably favour the removal of the restrictions.

• • •

Well, the latest thing in farm-colony philanthropy — I pray I be not accused of irreverence in this phrase, but farm-colony philanthropy is now an inevitable part of the romance of the rural economy—has, at least, a common-sense element in it. We are not going to establish with Mr. George Herring's £100,000—even if General Booth manages to get that sum largely supplemented by other men of the same generous type—a network of peasant proprietors throughout the land. I doubt that General Booth, even in his most roseate hour of extreme optimism, believes this. At all events, it is gratifying to perceive that the scheme betrays no evidence of the continued existence of the mischievous phantasy that you have only to draft a city corner-boy on to an allotment to at once have at your command, ready-fashioned by the supreme human sculptor, a complete farmer. General Booth tells us that the object of the plan is to prevent the exodus from the villages, and to attract from the cities those brought up in the villages. This is excellent. We are returning from feather-headism to sanity. And if experiments are to be made in peasant proprietorship it is as well, perhaps, that this should be done by private philanthropy rather than out of the purse of the State. The voice of the croaker is ever heard in the land — when money is being spent. And if national money spent in this way were not immediately reproductive there would be an inevitable growl against waste and the inevitable prophecy that an empire run thus must end in bankruptcy. When the scheme has to be really nationalised, when the fabric has to be completed, the State will be able to take full advantage of the lessons, the probably expensive lessons, culled for its behoof by well-meaning philanthropy. At all events, we have, I repeat, become enfranchised from the conviction of the very amateur social reformer—of course, the Socialist still holds it—that every out-o'-work is a born agriculturist.

• • •

The exigencies of the Yuletide week compel me to write on Thursday morning. Hence, it is that I am unable to verify the report that Sir Henry Campbell-Bannerman has resolved to throw Sir Horace Plunkett to the wolves. Alas! Sir Horace has written a book which has arraigned against him a vehement Irish priesthood, and this priesthood has pulled the strings which set its Nationalist puppets in motion. So — thus runs the story — Sir Horace, one of the best public servants Ireland has ever known, goes, in spite of Lord Aberdeen's desire to keep him. Well, if the story be true, it redounds little to the credit of Nationalism. Sir Horace has created in the Irish Board of Agriculture a really national organisation, whose every anxiety has been practical, whose method has been wise, and whose results have been numberless benefits — including bettered markets, improved railway rates, and instruction in scientific culture—to the Irish tenant-farmers. If Sir Horace be another victim to Celtic rivalries and priestly sensibilities, he has left behind him an excellent and enduring movement.

£100,000 for Small Holdings for Unemployed.

General Booth, the famous leader of the Salvation Army, has received from the well-known philanthropist, Mr. George Herring, the sum of £100,000, in order to carry out a scheme of home colonisation. By an ingenious arrangement, the benefits intended will operate in a two-fold direction, for the Salvation Army undertakes to pay over the whole sum, by 25 annual instalments, to the King's Hospital Fund. General Booth explained the scheme to a meeting of pressmen on Tuesday, and in the course of his speech said:—

The community is, as we all know too well, confronted at the moment with a great difficulty. We have a large number of unemployed people in this and other of great cities, who are not only a distress to themselves,, but a trouble to those about them. To furnish these people with work is admited on all hands o be the most effective remedy for the existing evil.

Emigration to other countries has seemed to me to be one important method of doing this, and no doubt a great amount of distress has been and still will be relieved thereby. But there is no doubt that, for a certain section of the city population, settlement on the land here in England would be the best and wisest solution of the problem; it would certainly be preferred by many who are greatly interested in the question. And for a particular class of the sufferers, notwithstanding the serious difficulties that appear to prevent its accomplishment, I believe it to be possible. I pointed this out when I launched my "Darkest England" scheme, sixteen years ago, and both I and my son Bramwell, who is my principal adviser, and who has considerable acquaintance with these questions, have been conjointly studying the problem ever since.

About that time I met Mr. George Herring—a gentleman whose name will be known to you and to the public because of his sympathies with the poor and suffering. He expressed his views as running in the same direction, and we had some conference at the time, but no distinct scheme was before us. During the years that have elapsed, his views have remained unchanged, and the recent distress has not only strengthened these opinions, but revived his determination to translate them, if possible, into actual practice; and the result is the formation of the following scheme:—

1. Mr. Herring is placing at the service of the Salvation Army the sum of £100,000 to finance the effort, a portion of which is to be at once expended in an initiatory experiment, the remainder to be furnished as required.

2. The entire amount is to be paid again by us, in twenty-five instalments, to the King's Hospital Fund, for which it will constitute a magnificent gift.

3. The Salvation Army is to conduct, control, and supervise the effort.

This involves the provision, for each settler, of five acres, or thereabouts, of suitable land; a cottage when required; the finding of stock, seed, implements, and other means necessary to the cultivation of the land; as well as adequate provision for their families until the land is sufficiently productive for their support.

All this, with interest, will be charged to the settler, and be paid by him in annual instalments, spread over a term of years.

This payment will be made up somewhat as follows:—

a. 3 per cent. on the entire amount.
b. 1¼ per cent. for an extinction fund.
c. ¾ per cent. for expenses of management.

When the holders have paid the entire sum required from them, the land will be conveyed to them,, subject to a covenant preventing the sale of intoxicating drinks upon any part of the holding. The profit, if any, from the scheme will go to form the nucleus of a permanent fud for the further extension of the effort.

Suitable land in localities possessed of the necessary means of transit will be required, and we shall be very glad, through the publicity of the press, to receive from friends information respecting land available and adapted to our object.

The plan, it will thus be seen, contemplates benefiting the community in several different ways:

First, it will supply an object-lesson, which, if successful, will lead to:—

a. The prevention of the exodus of agricultural people from the villages to the cities; and also attract back again to the land from the cities many of those who have been brought up in the country, and have an instinctive liking for it.

b. It will form an objective to place before the young people, which will help to overcome the existing restlessness, and, with the prospect of having land of their own, lead them to regard the country as their permanent home.

c. The method, if successful, has the advantage of giving the promise of covering the land with peasant proprietors, who must be, not only, as the poet sings, "a country's pride," but a very considerable element in a country's power and a country's wealth.

We are perfectly aware that this experiment will have to encounter many very serious difficulties. Thse difficulties have, I trust, been duly considered. We have gained in the past a great deal of experience, but perhaps few have had more disappointments with respect to those we have sought to benefit, our farm colonies at home and abroad, than ourselves. Still, there are peculiar advantages in the working out of this method which make us tolerably confident that with men who have had large experience in dealing with the classes we propose to help, as well as experience in the cultivation of the land, we shall, with the blessing of God, make it the success we desire.

With respect to the generositv, hopefulness, and faith of Mr. Herring, there will be no two opinions. By this gift he makes his deep interest in the welfare of the Fatherland evident to all men. He wishes to assist the struggling poor, but prefers to do it by helping them at home. Speaking for the Salvation Army, I can only say how heartily—and I hope intelligently—we shall labour to work out the scheme to the great success on which he had set his heart, and which, if realised, cannot but be welcomed and rejoiced over by every true lover of the nation.

A Description of Farming Life.

In the course of a lecture given before the members of the Aberdeen University Agriculture Discussion Society, Mr. W. S. Ferguson, Pictonshill, said that farming at its best, even although one might have a speciality, was not the most profitable calling on earth, but to the man who was able to pay his way, it was a free, charming, healthful, and independent life. He would not say that the farmers in this country were an indolent lot, but he would say that after extensive observation in Canada and the United States, our young men were not so keen nor so hard working as our cousins on the other side of the Atlantic. He had come across men out there with horny hands and in shirt sleeves whom he had known at home in swell clothes and kid gloves, and he ventured to say that had they stripped off their gloves at home and attended better to their men and their beasts, and given a practical hand when occasion required, they had not needed to go abroad.

True it was that unless one had a paying speciality at the top, farming was not amongst the most lucrative occupations, but when all was said and done, and notwithstanding unfair competition from abroad, and the other vicissitudes that the farmer had to suffer, was it not the case that, considering the capital the ordinary farmer possessed, he was, as a rule, quite as well off as other men in business, possessing an equal amount of capital? Moreover, he had more freedom and a healthier and more pleasant life than other men whose work was daily conducted in cities. That was the compensation.

They might not be "ay growin' richer," and few of them might ever make fortunes; but in that they escaped the danger of too much wealth—a disease which consumed many men and made them less human than when they were poor. They, as farmers, need not be frightened for this disease. Neither need they be frightened at the disease of poverty if they made up their minds to live within their incomes.

Royal Agricultural College, Cirencester.

The winter term of this college closed on Wednesday, when the principal, the Rev. J. B. McClellan, M.A., conferred the diplomas and other honours on the successful students. The diploma class was the largest and most distinguished in the annals of the college, numbering ten candidates, all of whom were successful, and the external examiners, viz., Mr. H. W. Adams (practical agriculture), Dr. J. A. Voelcker (agricultural chemistry), Professor H. Robinson, M. Inst.C.E. (land surveying and engineering), and Professor Sir G. Brown, C.B. (veterinary and bacteriology), spoke in the highest terms of the excellence of their work. One of the diploma candidates, Mr. Knubley, received the Council prize of £5 for herbarium of woody plants, mounted and named. The other chief awards follow:—

Honour Diploma of Membership.—(Maximum marks, 2,100; qualifying marks, 1,400.)—Albert Sasson, Alexandria, Egypt, 1,901; Miles Ponsonby Knubley, Steeple Ashton Vicarage, Trowbridge, 1,778; Harry Howard Beardsley, Hamilton Road, Sherwood Rise, Nottingham, 1,760; Lawrence Brown Akers, Hillside, Buckhurst Hill, Essex, 1,675; Kenneth McDiarmid, Devonshire Road, Liverpool, 1,656; Alan Roderick Whittington, Sandhills, Betchworth, 1,630; Harold de Byrlay Archer, Claremont Place, Sheffield, 1,619; Henry Trelss Watson, Croxteth Road, Liverpool, 1,586; John Poore, St. Helen's Parade, Southsea, 1,568; Lambert Wilfred Alexander de Sousa, Colombo, Ceylon, 1,533.

Gold Medal.—Albert Sasson.

Silver Medals.—M. P. Knubley, H. H. Beardsley.

Scholarships (open to the whole college).—(Maximum marks, 3,900; qualifying marks, 3,250.)—First scholarship, £25, Wathen Arthur Waller, Leek Wootton, Warwick, 3,739; second scholarship, £10, Robert Henry Price, Cloudesdale Road, Balham, 3,471; Proxime Accessit, Augustus Major Henniker; honourable mention on the term's work (in alphabetical order), Addison, A. Casey, Craven, Joynson, Landau, Oswald, Soubhy, Trier.

The Potato from an Experimental Point of View.

Some interesting remarks on the above subject were made at the last meeting of the East of Fife Farmers' Club by Dr. J. W. Wilson, Lecturer on Agriculture, St. Andrew's University. He said the potato had been grown in this country for three hundred years, and it differed from such crops as the cereals in refusing to produce varieties that lasted for an indefinite period under cultivation. It was seldom long out of the region of experiment. Hundreds of pounds were spent annually by County Councils, colleges, and clubs in testing the cropping and other qualities of the varieties at present grown, and many experimenters were busy at the task of producing new varieties to replace the old when these became worn out.

The tuber was a modified underground branch, in which starch was stored in large quantity. The whole plant died away annually, except the tubers, and by these the plant was easily propagated. The time might come when the chemist would succeed in finding a cheaper method of manufacturing starch than the plant did, but to all appearances the potato would retain its place on our tables as a staple and nutritious article of food for many a day.—

The Moon and Vegetation.

The widespread belief that the growth of plants is in some mysterious manner related to the phases of the moon has, it is stated, been put to the test by M. Flammarion, the eminent French astronomer. At dates selected to correspond with the age of the moon he planted a number of common vegetables, such as potatoes, peas, cabbages, etc., and carefully noted the variation in their growth. The results were rather damaging to the theory of the moon's influence, it being quite impossible to connect in any way the development of the plants with the varying phases of our satellite.

M. Flammarion, however, has decided to continue his experiments over a longer period and on a more extensive scale. Convinced that the growth of vegetation depended largely on sunspot activity, M. Flammarion many years ago began systematic observations on a number of trees in the vicinity of his residence, and after thirty years he claims to have proved that the annual development of certain trees, particularly the chestnut, varies with the solar disturbances. Of more general interest are his experiments at the Juvisy Observatory, Paris, where by intercepting the sun's rays with different-coloured glass he has found that while blue glass keeps vegetation back, red glass hastens it in a most remarkable manner. Some plants, indeed, attain under red glass tenfold the height reached under blue, and by the use of certain colours the colour and shape of the leaves can be modified at will.

Four animals belonging to the valuable Polled Angus herd of cattle on the Cloverley estate of Captain Heywood Lonsdale, near Market Drayton, have died from eating a quantity of poisonous yew and laurel leaves.

Pig-Pork. *Punch* has a very humorous paragraph, in connection with the motor question, in its current issue. It is as follows: Passer-by: "Is that your pork down there on the road, guv'nor?" Farmer: "Pork! What d've mean? There's a pig o' mine out there. Passer-by; "Ah, but there's a motor-car just been by."

NORTHERN NOTES.

Thus far the month of December has been very mild and pleasant, and it almost seems as though the Clerk of the Weather Office was attempting to atone for previous delinquencies. The later-sown wheats have made wonderful progress, despite the heavy handicapping by retarded germination in the end of October and in November. Swedes are still in active growth, and the pessimistic forecasts made in July and August are fortunately falsified, although well warranted when made. The Northern root crop is anything but a good one, but it is not by any means the utter failure it once seemed certain to prove. The open weather has permitted horned stock to run out later than usual and has encouraged the flock-owners to allow their ewes to remain in the pastures right up to Christmas.

At this moment there seems every prospect of a green Christmas, and one wonders if there is any truth in the old saw about the connection between a Green Christmas and a full churchyard. Some assert it to be unhealthy, but the assertion does not seem to have yet been proved. There is some foundation of truth in most of these old saws, and it seems undeniable that some amount of frost is necessary to sweeten the atmosphere and destroy he germs of fever and disease which lurk amongst us, especially in our towns and cities; but this does not mean that the frosts must come by December 25th. Most of us have preserved sufficient sentiment to prefer the aspect presented by a white world on Christmas Day, and it is undeniable that when the country lanes and the fields and the hedges are covered by newly-fallen snow, they have a beauty and a charm that is all their own. But snow in the town is another matter, especially after it has lain a day and a night, and has become besmutted and grimy from the smoke and dirt ever deposited in such places. When the streets are partially cleared after a heavy fall, especially if there be a partial thaw, and slush and dirt reign supreme, the remaining snow is no longer a thing of beauty or a sign of purity. And even in the country, those of us who have ceased to delight in snowballing, and who no longer partake of the enjoyments of foot-ball, and who have put away our skates for all time, can find some compensating advantages in a green Christmastide.

The younger branches, however, look anxiously for snow and for some amount of frost, as the outward and visible signs of the halo of romance attaching to the season. Some of the sports formerly common to all have died out amongst us, but the holiday and the family gatherings and general reunions remain, and are heartily cherished and preserved by Britain's sons who now sojourn in the land of the Cornstalks and on the other side of the Herring-Pond; but to us in the old country it seems difficult to realise a Christmas under a blazing sun, with the thermometer over a hundred in the shade.

There is no gainsaying that a certain degree of frost is beneficial to the farmer—at any rate to the arable farmer—as it tempers and sweetens his land, and to some extent its activities have similar results to those obtained from the application of lime. If he could have his way he would prefer that before the frosts set in there should be a fall of snow sufficiently deep to preserve his turnips and his new seeds from harm, and perhaps also his wheat; but he would desire that the snow should not fall upon his fallows and unsown lands, for there he would like the prevalence of the keenest and blackest frost. However, even as the rain falls alike upon the just and the unjust, so does the snow, while the frost is equally ubiquitous. Nature is no respecter of persons.

Outsiders sometimes ask how do stock fare in severe cold weather, and they seem astonished to learn that mere cold but slightly affects aught but pigs and calves and young lambs. The truth is, however, that horned stock can bear any amount of cold and frost if they are kept well littered, and if they can gain cover for their backs when rain or snow is falling. A bullock will rest with the greatest content amongst snow in a cattle-yard, while sheep never thrive so well as they do during frosts and snow, so long as their food remains unfrozen. The long-woolled races of sheep are often severely handicapped by mud and dirt when folded on roots on sticky land in wet weather, but when the ground is hardened by frost, and there is no puddle nor soil of the consistence of bindlime to attach to their fleeces, they will put on flesh with greater rapidity than under any other circumstances. Later on, in the Spring, on fine days, when the sun has some considerable power, sheep, especially sheep with heavy fleeces, lie about and eat nothing; but in the cold weather, when the frost is on the ground, they eat most heartily, if only the roots which form their staple article of diet are not frozen hard, and when filled to repletion, they repose on the frozen ground or hardened snow quite as comfortably and, indeed, more so—than they do in the late spring.

Hard winter weather is not a time for idleness on the farm, particularly on those arable farms where all the roots and the straw are consumed on the holding. Here large stocks of sheep and cattle are necessary, and when the thermometer falls halfway between the freezing-point and the zero of the Fahrenheit thermometer, and remains there for a day or two, and while it persists snow falls heavily, the whole manual labour of the farm must be utilised for the purposes of the livestock, and sometimes it puts a heavy strain upon the staff to keep the stock adequately fed. When the snow lies a foot deep on the level, covering turnips frozen by the preceding frosts until they seem as hard as stones, and have become so fast in the ground that they seem to have been encased in cement, the work of getting up the roots is a very difficul one.

Sometimes the sheep have to be dug out of the snow, as well as the turnips, and the writer well remembers a morning some 22 years ago when he had to dig some 50 of his sheep out of a drift some five feet deep, which had been formed during the night, and which covered about an acre of a hillside in a turnip-field where some 600 sheep were folded. The sheep had to be counted, and through some mis-counting it was not noticed that one was wanting. The sheep had nearly finished the turnips in that field, and were removed from it a week later, and were afterwards re-counted, when one was definitely ascertained to be missing. A search was made in the original drift, and a shepherd's dog found the missing animal; it had been covered with snow in a slight depression close to the hedge, and when released was no worse for its confinement of fourteen days, although it did not seem to have moved more than its own length under the snow during the whole period. It had grazed the turnips close to it, but it must have suffered from want of food, as it could have eaten in a couple of days all the food it had consumed. All the same, it did not prove to be any the worse for its privation, except that it was very hungry. M. Y.

December 21, 1905.

Edinburgh and East of Scotland College of Agriculture.

At a meeting of the Governors of the Edinburgh and East of Scotland College of Agriculture on Wednesday, Dr. J. J. Dobbie, convener of the Central Studies Committee, reported a gratifying increase in the enrolment of students at both the day and evening classes. At the former the numbers this session were 67 as against 58 last year, and at the night classes 181 as against 171. It must be gratifying, he thought, that the fine accommodation they provided in the college was already being fully taken advantage of. The committee recommended that in view of the success of the teacher's class in nature knowledge a second class should be started in the spring. No part of the expense of these classes, Dr. Dobbie said, fell on the college, the Town Council of Edinburgh contributing £50 and the Education Department the remainder.

A letter was submitted from the Irish Board of Agriculture suggesting, in view of inquiries that they had had from people in Great Britain regarding the advantage or otherwise of changing the seed potatoes from Ireland, that experiments might be conducted. The Board offered to assist the college by sending free 56lb. of each of four varieties of potato to be grown under like conditions with Scotch and English varieties.

The chairman (Colonel Wardlaw Ramsay) said the feeling of the County Work Committee was that not only should the Irish Board pay the cost of the Irish seed, but of the English and Scotch seed to be brought against it.

Mr. James Macdonald said he did not think one experiment in Scotland was of value, and thought they might suggest to the Irish Board to conduct it on a broader basis by having it at half a dozen centres and continuing it probably for two or three years. At the same time he thought it an excellent idea that there should be co-operation between the Department and the colleges; and he further suggested that the Irish Board should pay half the expenses.

Mr. J. M'Hutchen Dobbie said he regarded the quantity offered for experiment as ridiculous, good enough for an experimental farm, but not large enough for a practical farm experiment.

Mr. Thomas Elder, Stevenston Mains, Haddington, agreeing with Mr. Dobbie, thought the proposal was on too small a scale, and that the Irish Board should bear the expense of the experiment minus the services of the college officials.

Mr. Joseph Budge, Wemyss, suggested that powers be given to the County Work Committee to consult with the other Scotish colleges, with a view to carrying on the experiment, and to report if necessary.

The Finance Committee (Colonel W. W. Gray, convener) reported that the estimated income for the year was £4,444 5s. 5d., the chief contributing items being £2,020 in grants from Town and County Councils, and £2,027 5s. 5d. from Government grants. The estimated deficit was £8 5s. 5d.

Midland Notes.

These are dull days in the agricultural world—dull in every sense of the word. In our latitudes work must now be started by the ineffectual glimmer of the lantern in the morning, and nowadays the sun is below the horizon again by ten minutes to four. Lately, indeed, it has generally sunk behind impenetrable banks of cloud long before that time, and so the delight of these shortest days of all the year is rendered shorter than ever.

The day of St. Thomas, the Blessed Divine,
Is good for brewing, baking, or killing fat swine.

It is not good, assuredly for field work, nor is it until Plough Monday comes in due course that the arrears are likely really to begin to be wiped off. That is assuming that the land is then in fair condition, as it should be with ordinary good fortune. The actual amount of rain resulting from all this cloud that hangs persistently overhead is inconsiderable, and though the land is still generally very wet, one hears from the North—from Derbyshire and North Notts, for instance—of springs and ponds even now at a low level.

It is beyond any doubt that the recent series of dry years has brought our underground water supplies down to an unusually, and, perhaps, an unprecedentally low ebb, and when they once become really depleted it takes more than one season to restore them. They are hard to exhaust, but harder still to replenish, especially in these days of good surface drainage, when we hasten to conduct every possible drop of rain-water first into ditch and drain and then successively to stream and river.

The scarcity of water which now seriously, and almost permanently, menaces some districts, suggests another plank which may have to be added before long to the agricultural platform. One need not travel very far in England, whether in the Midlands or in other districts, to discover some unforseen effects of the enormous consumption of water in the great cities. Springs and wells dried up or much decreased in volume, pools gradually contracting, and the upper reaches of small streams shrinking and shortening—all these are warnings not without significance, though no thought of their gravity ever seems to occur to urban officials who draw their millions of gallons of water from the country and apply it to dust-laying and street-cleaning. The truth is, the demand is becoming steadily more than the rural districts can bear.

The Christmas sales are about over, and the lesson they teach is the familiar one that quality pays. While the top prices have not been bad as a rule it is only good-looking, symmetrical beasts, generally with a respectable pedigree on one side at least, that have paid their way. The merely moderate lots cannot have yielded much or any profit, and the vendor of such has been fortunate who has also had sheep to dispose of.

When the year's accounts come to be reckoned up, sheep will be found contributing not a little to the profits, and it must be hoped that the lambing season will leave us with augmented flocks. The scarcity of sheep has passed the stage when it was merely an interesting matter of figures. It is actually visible, and so are its results. Farmers in the West Midlands agree that there are noticeably fewer sheep on the roots than in past years, and as one goes towards the East one hears the same remark. Flocks are fewer, and mutton dearer everywhere—to say nothing of wool, whose dearness is due to other causes.

Much room as there still is for improvement, agriculture ends the year with brighter prospects. The Board of Agriculture tables speak for themselves. Out of ten Midland counties Warwick, Worcester, Derby, Leicester, Rutland, and Salop all show an expanded area of tenant-farmed land, and a corresponding shrinkage in land "in hand," and the agricultural auctioneers and land agents help on the whole to confirm the conclusion that lettings have been easier.

There is unquestionably a better feeling in regard to agricultural properties," writes a leading Stafford firm; and well-known Nottingham agents tell me that "farms and agricultural land have let and sold freely;" while one hears from a London firm doing a good deal of business in

the Midlands of £60,000 worth of agricultural property being sold through their agency within three months. There is a discordant note sounded in Derbyshire in a report of farms "letting on reduced rentals," but even here there "are few empty." It would be easy to overrate the significance of all this, but the attraction of new and increased capital to any business is generally a healthy sign, and it seems in this case as though both landowners and tenants were beginning to regard the rural outlook a little more hopefully.

December 21, 1905.

EAST ANGLIAN NOTES.

"A green Christmas makes a fat churchyard," is an old saying, and the writer during the past week, in journeying through East Anglia, missed many an old familiar face from the market table. The crops themselves look remarkably well, and one pleasing feature noted by the writer, not only in Essex, Suffolk, and Norfolk, but in Lincolnshire, was the increased area devoted to cereals.

The Eastern Counties Dairy Farmers' Society are issuing a calendar for 1906, with rules for milkers prominently printed, marked "With the authority of Dr. J. C. Thresh."

In the recent fight between Essex and Herts for the ten parishes forming the Stansted Rural Council a great grievance was made of the fact that the orders regulating the movement of swine prevented the farmers in those parishes sending their stock to Bishop Stortford market. It is pleasant therefore to record that steps are being taken to obliterate this grievance. The idea is to form Essex, Suffolk, and Norfolk into one district for swine fevr purposes, and Herts and Bedfordshire into another district, while for the convenience of the Stansted parishes and for this single purpose of swine fever regulations only it is proposed to consider the Stansted Rural District as part of Herts. The Board of Agriculture are willing to consent to this arrangement, and the matter is to come before the Essex County Council at their next meeting.

Mr. J. W. Smith, of North Green, Pulham Market, is probably the largest buyer of the Norfolk turkey in the United Kingdom, and during the past fortnight wagon loads of birds have reached him from various parts of Norfolk and Suffolk, to be killed and dressed for the market. Mr. Smith has purchased this season about 5,000 birds, and during the past week large consignments have been despatched from Pulham St. Mary Station, principally to the metropolis. The birds are loaded on special trucks, and every care is taken to ensure the birds reaching the consumer in good condition.

The potato harvest supper and concert took place at Bicker on Friday, when about 250 persons wer entertained in Mr. Sharpe's barn, the Rev. W. H. Judd acting as chairman, and it is gratifying to learn that as a result of the concert a good sum of money is in hand to be distributed among the poor of the parish.

The late Mr. Richard Chatterton, of Stenigot, Louth, who was a member of the Louth Board of Guardians, and a farmer and stock breeder, and of the well-known firm of Messrs. R. and R. Chatterton, exporters of live stock, mainly associated with the Lincolnshire and red Shorthorn cattle, who died on the 29th of June last, aged 50 years, left estate of the gross value of £18,398 8s., of which the net personalty has been sworn at £4,783 15s. 11d.

December 22, 1905.

Forty-five Cattle Destroyed by Fire.—By a fire which broke out on Brickhampton Farm, Churchtown, near Cheltenham, some forty-five cattle were destroyed. The farm is occupied by Mr. W. H. Smith, and the discovery of the outbreak was made from her bedroom window by his wife, about one o'clock in the morning. She at once raised an alarm, and Mr. Smith and all available hands went to the rescue, while the Gloucester Fire Brigade was also sent for. By the time Mr. Smith reached the cowsheds, however, it was, owing to the fierceness of the flames, found to be impossible to get inside to release the cattle housed therein, and he had perforce to stand by and watch the destruction of the whole lot, which comprised one bull, thirty-five milking cows, and nine calves. Upon the arrival of the fire brigade, their efforts were successfully directed towards preventing a spread of the flames to the other out-buildings adjacent to the cowsheds, and when the flames had been eventually extinguished the roasted carcases of the beasts which had perished were found huddled together beside the wall they had been unable to break through. There appears to be no explanation forthcoming as to how the fire originated.

An Improved Method of Pasteurising Milk.

An interesting address on the above subject was delivered by Mr. J. Stirling, of the Glasgow Dairy Co., Limited, at a recent meeting of the Glasgow and West of Scotland Agricultural Discussion Society. Mr. Stirling said his attention was drawn to the probability of a defect in the prevailing method of pasteurising milk by the candid criticism of a friend, who was looking at the process as it was then being carried out on the premises of the company mentioned above. That process, while differing in detail, was essentially the same in regard to heating and cooling as that commonly adopted for commercial pasteurising. The milk was filtered by the Laval separator, heated by a pasteuriser of the Swedish type to a temperature of 160 degrees Fahrenheit, retained near that temperature in an intermediate tank for twenty minutes, and then cooled rapidly over a Lawrence refrigerator. The filtering and the heating processes met with the visitor's entire approval, but he strenuously objected to the cooling process, because, in his opinion, and to use his own words, it was "simply undoing a good work."

It was somewhat staggering, continued Mr. Stirling, to hear this objection raised, especially as the system had been considered generally to be beyond the experimental stage, and to urge in defence that it was in line with the best teaching of the dairy schools here and in Denmark proved of no avail, for the longer my friend looked at the thin sheet of milk flowing down the ribbed sides of the refrigerator, the more he seemed to be convinced that there could not be a better or more effective exposure for attracting a fresh invasion of bacterial life. His contention seemed to me to be perfectly sound and reasonable, and prompted inquiry as to its value when applied to practical work.

Experiments were begun in May, 1904, and were carried out weekly till the month of October in the manner of a practical dairyman, whose tests were simply the smell, taste, and keeping qualities of the samples. The samples were taken in the following manner—viz., three two-gallon portions of the same supply of milk were taken from the arm of the Laval pasteuriser at the indicated heat of 160 degrees Fahrenheit, and sample No. 1, described as "No cooler," was put in a two-gallon tin flask, which had a good fitting lid, and immediately the flask was filled the lid was put on and tied down, and the sample left in a corner of the dairy for forty-eight hours, with no cooling agency but the surrounding atmosphere. No. 2, described as "Cooled in bulk," was treated in the same manner as No. 1, but, instead of being left to cool by the surrounding atmosphere, it was placed in a bath of cold running water, and kept there for forty-eight hours. No. 3, described as "Refrigerated." The milk in this instance was, immediately on coming from the pasteuriser, passed over a Lawrence refrigerator, then a two-gallon flask was filled, securely covered with a lid, and placed in bath of running water for forty-eight hours.

The flasks were opened after standing forty-eight hours and judged, and for further observation a sample of each was bottled and tested on the third and fourth days. The result was in every instance in favour of No. 2, or "Cooling in bulk," for smell, flavour, and keeping quality, and on only two occasions between Many and October did No. 1 fail to be better than No. 3.

The indication given by these simple experiments was so very clear and satisfactory that the Glasgow Dairy Co., Limited, resolved in September of last year to introduce the bulk system of cooling in quantities of 10 gallons. The first instalment of this plant was sufficient to pasteurise 180 gallons, and consisted of a steel tank measuring 6ft. 6in. by 5ft. by 26in. deep, and twenty 10-gallon churns of the reform type, with good-fitting lids. The churns, when filled with pasteurised milk, contain 9 gallons of solid milk and 1 gallon of froth, and this froth serves the good purposes of preventing a skin from forming on the top of the milk, and allowing the level of the cold water to be well above the level of the cooling milk.

The result of this new practical departure was in every respect satisfactory, and while it proved to be superior to the work of the Lawrence refrigerator, it would have been unfair to condemn an old helpmate without further inquiry. Consequently Mr. D. K. Robb, of the West of Scotland Agricultural College, was consulted on the matter, and he kindly consented to verify our findings by having the experiments carried out under his supervision. It was arranged that the samples be taken in the same manner and under the same conditions as the samples already founded upon—that is, they were to be pasteurised to 160 degrees Fahrenheit, cooled over the refrigerator, and kept under seal for forty-eight hours before examination.

On October 27 last three samples of milk treated as described above, were taken in his presence, and each flask tied and sealed, each seal bearing Mr. Robb's signature. The flasks were opened by Mr. Robb on October 29, and the judgment given was that, while all the samples were perfectly sweet, the difference in the flavour of each was quite distinct. No. 1 had the tendency to a cooked flavour, Nos. 2 and 3 being natural in flavour, No. 2 being decidedly the finest. A sample of each was put into a pint bottle of the clear Calypso type to watch further development. On the 31st the bottles were opened, and while they still all remained sweet, the flavours found on Saturday were more pronounced, and maintained the order of merit given. These bottles were kept till Wednesday, November 2, when they were sent to Dr. Clark, city analyst, Glasgow, for the purpose of ascertaining the amount of lactic acid in each sample. Following Dr. Clark's report, we interested Dr. Buchanan, the city bacteriologist, in the matter, and he kindly undertook to help in the inquiry. The results were in perfect harmony with the findings of the earier experiments.

In the second series of experiments, commenced in July of this year, the quantities treated were much larger, being samples taken from the 10-gallon churn system of bulk cooling adopted by the company. The bacterial work was conducted by Robert M. Clark, B.Sc., of the City Analyst's Laboratory, Glasgow. On July 6 three churns of milk were treated in the following manner:—No. 1.—The milk was pasteurised to 160 degrees Fahrenheit, and cooled at once over a Lawrence refrigerator to 64 degrees Fahrenheit, then filled into a 10-gallon churn and covered with a good fitting lid. The churn was then placed in a bath of cold running water till 5 a.m. on the 7th, when a sample of it was taken and bottled for Mr. Clark, in whose hands it was delivered at 10 a.m., that being twenty-two hours after the act of pasteurising. The temperature of the milk at 5 a.m. was 60 degrees Fahrenheit. No. 2.—Pasteurised as above, but instead of being pased over the refrigerator, the milk ran directly into a 10-gallon churn at 160 degrees Fahrenheit. The churn, when full, was covered at once with a good-fitting lid, and allowed to stand on the dairy floor for thirty minutes, after which time it was placed in a bath of cold running water for the same length of time as No. 1. No. 3.—The same in every way as No. 2, excepting the period of standing before being put into the bath, which in this case was sixty minutes.

Experiment No. 2, July 7, 1905.—Samples Nos. 1, 2, and 3 treated in every way like the milk of the previou day, esxcept the pasteurising temperature, which was 150 degrees Fahrenheit.

Experiment No. 3, July 11, 1905.—Samples Nos. 1, 2, and 3 were treated in the same manner, and to the same temperature as experiment No. 1, with this difference, that the samples were in Mr. Clark's hands five hours after pasteurising, instead of twenty-two hours as in No. 1. The object of experiments No. 4 and 5 was to find out, first, the relative value of a sustained heat at a moderate temperature as against a momentary exposure to a high temperature; and second, to test the refrigerator with milk which had been subjected to a sustained heat.

Experiment No. 4, sample No. 1.—The milk was pasteurised to 185 degrees Fahrenheit, and cooled at once over a Lawrence refrigerator. Sample No. 2.—Pasteurised to 150 degrees Fahrenheit, the milk ran directly from the pasteuriser into a 10-gallon churn, which, when full, was covered at once with a good-fitting lid, and allowed to stand without any cooling agency but the atmosphere of the dairy for thirty minutes, and then passed over the Lawrence refrigerator. Sample No. 3.—Treated as described in No 2, but, instead of being passed over the refrigerator at the half-hour, the closed churn was placed in the bath of cold running water. No. 4.—Treated like No. 3, but was allowed to stand for sixty minutes before being put into the bath. The milk of Nos. 1 and 2 was, immediately on being refrigerated, put into closed churns, and these churns were put in a bath of cold water till all the samples were taken on the following morning. The samples of this lot were handed to Mr. Clark twenty-two hours after the time of pasteurising.

Experiment No. 5.—The samples of this experiment were treated in the same manner as the same numbers in experiment No. 4, but were handed to Mr. Clark five hours after pasteurising.

From these figures we gather that, compared with the last table, the virtue of cooling milk in bulk has materially increased, and this is due to the larger quantity treated, and to the adoption of the sustained heat. Dealing with experiments Nos. 1, 2, and 3, it will be found that No. 3 is forty-three times, and No. 2, 13½ times better in bacterial contents, and 6 and 7 times respectively in spore contents than No. 1, which was cooled over the Lawrence refrigerator. From experiments No. 4 and No. 5 we learn, first, that a sustained heat of 150 degrees Fahrenheit for not less than half an hour is of greater pasteurising value than a momentary exposure to 185 degrees Fahrenheit; and, second, that milk submitted to a sustained heat of 150 degrees Fahrenheit for not less than half an hour, and then cooled by a Lawrence refrigerator, has fourteen times less pasteurising value than if it had been cooled in bulk.

At this stage I thought the case for the open refrigerator had been pretty well exhausted, but in consultation with a friend of riper experience in dairy matters it was suggested that one more experiment might be made to ascertain the result of the refrigerator when applied to milk cooled in bulk to 110 degrees Fahrenheit. Consequently, on November 7, two churns of the same supply of milk were pasteurised to 150 degrees Fahrenheit, retained hot for half an hour, then put into the cooling tank. Churn No. 1 was taken out of the water when the milk indicated 110 degrees Fahrenheit, and cooled over the open refrigerator; No. 2 was not disturbed till the sample was taken. The result reported by Mr. Clark was:—

No. 1.—Organisms per C.C., 6200; spores, 400.
No. 2.—Organisms per C.C., 160; spores, 110.

These figures are of great interest, not merely because they determine finally that the use of the open refrigerator in milk pasteurising is "undoing a good work," but because they clearly indicate that its use with warm milk in its raw state is not above suspicion.

The success of the new method of pasteurising is almost entirely due to the non-exposure of the milk from the moment of pasteurising till the time of despatch to the consumer. In this particular it is in conformity with the best hygienic principles, and apart from the scientific aspect of the point, it forms rather a pleasant feature in the diary in comparison with the old system of milk in open vessels, exposed to every particle of dust. The value of the method is very much enhanced by the milk being filled into bottles at the pasteurising temperature, and sealed till opened at the consumer's table. The pasteurising power of this method permits of a comparatively low temperature being used, and the Glasgow Dairy Co., Limited, have chosen 150 degrees Fahrenheit, with a sustained heat of not less than half an hour. At this temperature the sugar and the albuminoid constituents of the milk are not injured, nor the natural flavour spoiled, and, further, it remains quite as sensitive to the action of rennet as raw milk.

When this improvement can be attained with some degree of safety regarding the destruction of milk-borne disease germs, there is no good reason for destroying the flavour and the assimilating properties of the milk by submitting it to a higher temperature. In adopting the temperature of 150 degrees Fahrenheit, due regard has been given to authorities on the subject, like Mr. Theobald Smith, Messrs. Russell and Hastings, and Professor Bang of Denmark.

The first two experts named have gone extensively into the question of skin formation on the top of the milk while in the process of being pasteurised, and, to quote Messrs. Russell and Hastings, they found, first, "an exposure of tuberculous milk to 140 degrees Fahrenheit in a tightly closed commercial pasteuriser for a period of ten minutes destroyed in every case the tubercle bacillus as determined by the inoculation of such heated milk into susceptible animals like guinea pigs; second, where milk was exposed under conditions that would enable a pellicle or membrane to form on the surface, the tubercle organism is able to resist the action of heat at 140 degrees Fahrenheit for considerably longer periods of time; third, efficient pasteurisation can be more readily accomplished in a closed receptacle, such as is most frequently used in the commercial treatment of milk, than when milk is treated in open bottles or open vats.

The new method brought before you is free of any pellicle or skin formation. Professor Bang found that milk heated for an instant to 185 degrees Fahrenheit killed the tubercle bacilli, and on this finding is based the Danish Law of 1893, and re-enacted in 1904, which provides that for the prevention of milk-borne tuberculosis in cattle and pigs, all milk sold, or used for their food, must be pasteurised to 185 degrees Fahrenheit." We have already demonstrated that 150 degrees Fahrenheit, with a sustained heat for half an hour, and cooled by the new method, is more powerful as a pasteurising agent than a momentary exposure to 185 degrees Fahrenheit, and, therefore, in selecting the lower temperature, we are well within the limits of reasonable immunity from milk-borne disease. The protection afforded the cattle and the pigs of Denmark is a wise and prudent one, but it has always occurred to me as worthy of a nobler mission by its extension to the members of the human family.

When advocating universal pasteurising, seven years ago, I remember well its chilling reception. It was called a salve to the dairyman's conscience, and likened to the city of Glasgow procuring a pure water supply by boiling the Clyde instead of going to the mountain-side for the pellucid spring. It was also asserted that the conditions necessary for producing a milk supply free of disease germs were a healthy stock, kept under proper sanitary conditions, and cleanliness in the handling of the milk. These high-sounding sentiments, expressed in such a forcible manner, are very nice, and exactly what one would desire to see, but what do they mean when reduced to practice? It falls to be recorded with sorrow that some who at that time were so very confident of their ability to select and produce the ideal article have, when placed in the positions respectively of purveyor and producer, been confronted with an epidemic carried by a supply of milk over which they had the selection and control.

Then, again, if we read about the means taken by companies, like the Walker Gordon Laboratory Company, to secure the ideal milk, we are much surprised at the prominence given to the use of strainers and filters. Those useful implements imply the presence of solid impurities, and while these may be successfully taken out, they leave behind them a colony of undesirable aliens of a power which, without examination, no man can tell. The ideal lacteal stream is, therefore, still in the land that is afar off, and until it comes within the region of practical dairying we must grapple the realities of to-day, and use every reasonable safeguard for the prevention of milk-borne disease.

Disease Germs in Milk.

Some startling figures about milk, coupled with a serious warning as to possible foreign competition, were given in an address to Essex farmers and dairymen at a recent market-day meeting at Chelmsford by Dr. Thresh, who said it was a mistake to think that the interest of the dairy farmers and of the public were antagonistic. The farmers wanted an increased price for their milk, and he believed the public would pay if the increase was reasonable and necessary. Having referred to the fact that in recent years many epidemics had been traced to milk, he said that microbes were especially prone to occur in dirty, unventilated, and badly-lighted premises—conditions too frequently found when cows where kept and milked. Carefully drawn milk might contain 50,000 bacteria per cubic centimetre (15 drops), but these organisms increased so rapidly that by the time the milk reached the consumer it might contain millions per cubic centremetre.

In samples he had tested bacteria had rarely been under one million per cubic centimetre, or 50,000 microbes in each drop of milk! Therefore a child who took half a pint of milk per day swallowed 300 to 500 million living organisms! Scarlet fever outbreaks had been recorded in which as many as 500 or 600 persons, supplied with milk from a single farm, had been attacked by the disease in a few days. Generally it was found that the milk had been infected by a person recovering from the disease, but in a few cases it had been attributed to the cow which had been suffering from ulcerated udders. Typhoid and skin diseases were also communicated by milk, and from 20,000 to 30,000 infants perished annually in the United Kingdom from diarrhœa, a large proportion of them being infected through the milk.

This was enough to show how vitally important it was to this country that children should be supplied with clean, pure milk; and it was important that dairymen should know that under a recent Act persons who suffered from the use of impure milk could obtain damages from the person who sold it. Personally, he should like to see a person who sold milk from a diseased cow rendered liable to imprisonment with hard labour without the option of a fine, and if death could be traced to the use of such milk the person proved culpable should be committed for manslaughter, and be liable to penal servitude for life.

The methods which he suggested should be adopted in the production of clean milk were that, in addition to having healthy cows, they should keep them under sanitary conditions, and that every attention should be paid to the cleanliness of the milkers and the utensils which they used. The cooling of milk was another important matter, and if the milk could be kept at a temperature of 40 Fahrenheit there would be no difficulty in preserving it good for forty-eight hours.

He objected to the use of preservatives, and said that if they encouraged the sterilising of milk they would open the door to the importation of foreign milk, as sterilised milk from Denmark could be imported and be every whit as good as English sterilised milk, and certainly cheaper. He also recommended that retailers should be more careful in their methods of storing milk.

Concluding, he said: We are on the verge of a revolution in the milk trade. It remains for the milk producers of this country to decide whether they will initiate the change and benefit by it or whether they will remain apathetic and allow it to be effected by the foreigner by the introduction of cheap sterilised milk. In the latter case, I see ruin staring the English dairy farmer in the face and a national calamity imminent. A little energy and a little enterprise, and we retain this national industry.

THE TENS OF THOUSANDS of users of MOLASSINE MEAL should see that their stock have a portion in every feed all the year round, not simply as a condiment when an animal is out of condition, or occasionally as a fillip. MOLASSINE MEAL is the most valuable and economical food, displacing all condiments, and should be given in place of the same weight of oats, beans, grain, cake, or other feeding stuffs. Manufactured by HENRY TATE AND SONS, LTD., Sugar Refiners, London and Liverpool. Sold by all Grain and Forage Merchants and the MOLASSINE CO., LTD., 36, Mark Lane, London, E.C.; 125, Hope Street, Glasgow; and 43, Dame Street, Dublin.—[ADVT.]

Co-operative Dairy Farming in Teesdale.

Nearly one hundred of the leading agriculturists of the neighbourhood attended a Conference of Teesdale farmers, held at Lartington, on the 16th inst., with the object of taking definite steps to establish a central dairy and creameries in Teesdale. The chair was occupied by Mr. W. R. Claude Hutchinson, of Startforth aHll, who said that it was time that some definite action was taken in regard to a scheme which had for its object the application of co-operative principles to dairy farming. Lord Zetland, Lord Barnard, Lord Ronaldshay, Mr. Silvertop, the owner of the Minster Acres (Northumberland), and the Lartington (Yorkshire) estates, and Mr. Adam Dugdale, of Gilmonby Hall, had all expressed approval of the scheme.

Mr. Fitzherbert Brockholes, chairman of the Lancashire Farmers' Association, said that the object of farming as an industry was to increase production of the greatest extent, and at a cost which would admit of the greatest profit to the producers. Science, applied in a proper manner, increased production, and improved the selling value of produce. Co-operation, if carried out on lines which were not only sound, but suitable to local conditions, came as a most powerful helpmate. To avoid misunderstanding he was anxious to make it clear at the outset that the Agricultural Organisation Society was not a trading body, and had no commercial interest in co-operation. The movement was absolutely non-political, and there were no class distinctions, for the combination of landowners and tenants was not only advisable but essential. He held very strong views on this point. Sometimes they had heard it asserted that the interests of landlord and tenant were not identical, but he firmly maintained that these interests were so intermingled as to be inseparable. The next point to consider was how best to apply co-operative principles to local conditions, and this he should leave to the farmers assembled to solve. If local conditions were favourable for a dairy society, then they must determine what form it should take, for they must remember that no uniform model was possible.

Mr. T. Atkinson, Newcastle-on-Tyne, the agent for the Lartington estates, said that Mr. Silvertop, the owner, would grant a site for a dairy at a nominal rental of sixpence or a shilling per annum, and would also take shares in the concern.

Mr. Mason, organising secretary for Yorkshire, suggested the registration of the society as the Teesdale Associated Farmers. He said that fadmers would save £1 per cow by co-operation.

Mr. A. D. Acland said thot he saw no reason why the Farmers' Protection Society, which was then being formed in Teesdale, should not run alongside the contemplated branch of the Agricultural Organisation Society, which they were seeking that day to inaugurate. The difficulty he had experienced in the latter movement in Wensleydale was the fear of one farmer being "Yorkshired" by another, when the real aim was to "Yorkshire" the general public outside.

The meeting then agreed unanimously to appoint a committee. Ten gentlemen were constituted a provisional committee, with power to add

to their number. The North-Eastern Railway Company will be approached, and the whole question considered in detail.

An Important Milk Case.

An important judgment affecting farmers sending milk by rail, and indeed milk dealers generally, was recently delivered at the Leeds Police Court by the Stipendiary Magistrate (Mr. C. M. Atkinson). There were two cases, the defendants being Simon Foster, farmer, of Stainforth, near Settle; and Eleanor Newbould, farmer, of Grassington, both summoned under the Food and Drugs Act, by the Leeds Sanitary Authority, for selling milk with added water.

His Worship, in his judgment, said if the milk, of which a sample was taken in this was, was in reality adulterated by the addition of 9 per cent. of water, the facts were on all fours with those in Parker v. Alder (1899), L. Q.B. 20, and he was bound by the authority of that decision to hold that an offence had been committed. Now milk always contained a large quantity of water, and this quantity varied according to the richness of the milk. If, then, the percentage of non-fatty solids fell somewhat below the arbitrary standard fixed by the Board of Agriculture, it did not necessarily follow that the milk had been adulterated. It might be a genuine sample of a lower quality. But under the Act of 1899 the Board of Agriculture had decreed that if the sample fell below the standard percentage, the Court must presume that the article was not genuine until the contrary was proved.

Now, as the milk in this case was not under the defendant's supervision or control for some hours before the sample was taken, it was impossible for him to prove that it was not tampered with in transit. As, however, he (the learned magistrate) was satisfied that no water was added by the defendant, or by his servants, or by any person with their approval or cognisance, he gatherd from the judgments in Parker v. Alder that the proper course was to hold the offence proved, but to dismiss the information under Sec. 16 (I.) of the Summary Jurisdiction Act, on payment of costs.

He (the learned magistrate) was glad to find that the railway companies now permitted milk-cans to be locked or sealed, otherwise he did not see how a farmer could protect himself. I adhere (concluded his Worship) to the view I expressed at the hearing as to the construction of Sec. 14 of the Act of 1899, i.e., that it does not preclude the taking of a sample of milk without the consent of the consignee. This judgment applied also in the case of Newbould.

The Milk Standard: Applications for Summons Refused,

At the North London Police Court, on Wednesday, one of the sanitary inspectors of Hackney asked Mr. d'Eyncourt, the stipendiary magistrate, for a summons against a milk dealer for selling milk alleged to have been adulterated with 3 per cent. of added water. The request was refused. Later in the day Mr. A. W. Williams, the town clerk of Hackney, renewed the application. He explained that the Board of Agriculture had put pressure on the borough council to prosecute in all cases of adulteration, and wanted to know why proceedings were not taken.

Mr. d' Eyncourt said that his reason for refusing the summons was that analyses were all a question of inference, and a margin of 3 per cent. was not sufficient. He was bound to say that if such a case were proved before him he should inflict no penalty, as samples of admittedly genuine milk had been known to contain 10 to 15 per cent. more water than the standard allowed. Therefore it would be simply wasting time to grant a summons.

Mr. Williams observed that he was in sympathy with the magistrate's views. For a long time the borough council had allowed a margin of 5 per cent., but after the communication from the Board of Agriculture he felt bound to renew the application. The summons was not granted.

Butter Weights in Yorkshire.

At a largely attended meeting of the Bedale Farmers' Protection Association, held on Tuesday, the hon. sec. (Mr. R. N. Richardson) read a letter from the Northallerton Agricultural Club, asking the Bedale Farmers' Protection Society to support a movement in favour of a uniform weight of butter, viz., 16 ounces to 1 lb., in lieu of the present standard of 24 ounces. Mr. Richardson stated that there was a great future for the Ripon, Bedale, Northallerton, Thirsk, Masham, Leyburn, and Hawes markets if they adopted the change. At present buyers from the North and South would not purchase in the North Riding, because butter was not sold of the standard weight of 16 ounces.

A motion in favour of the proposed change was carried by 24 votes to two. It was also resolved to communicate with the official bodies at Ripon, Northallerton, Thirsk, Masham, Leyburn, and Hawes, requestingtheirsupport for a uniform standard.

At the same meeting a member gave notice of motion to cancel the existing practice of conceding ¼ lb. to the purchaser of sheep wool, which was now allowed per stone, in the North Riding.

An Agricultural Society's New Departure.

The Newchurch and District Agricultural Society has started a correspondence bureau for farmers. They have made arrangements whereby any farmer in the Rossendale division may write to Miss Wyre, of the Lancashire County Council farm, Preston, for information and advice on anything relating to dairying, or may send her samples of milk, cream, and butter to be tested. Advice will be given to them free of charge, and sixpence will cover the cost of testing the milk and butter. Miss Wyre's fee will be paid by the Agricultural Society.

MILLING.

A Review of the Past Year.

At the close of the year it is always both interesting and instructive to review the events of the past twelve months, so far as milling methods and machinery are concerned. There is no finality in the process of reducing wheat into flour; some changes in the mode of working, and some different applications of principles are continually going on. The two great steps in flour milling, or rather wheat milling, are reduction and separation. These steps are continually following each other, just as day follows night. The wheat is gradually broken down in order that it may be gradually purified, or in other words, that its impurities may be gradually extracted, by sieves, centrifugals, reels, inter-elevators, etc. The bread-eating public nowadays will have pure flours, and all the arts of the miller are expended in arriving at that result. If there were no impurities inside the wheat berry, the removal of which is absolutely necessary in order to ensure pure flours, there would have been no need for gradual reduction, and no need for the purifier and other separating machines, only so far as sizing for smooth rolls is concerned. In the absence of such internal impurities, the miller would make an effort to reduce the wheat at one, or at most two, operations. There would be no need for making careful separations on sieving and centrifugal machines, since there would be no deleterious matter to extract. The miller would not succeed in reducing wheat all at once, although he might try. He would always find that there would be a tail-over for further reduction, even in the absence of all impurities. But the fact that broken wheat does contain the latter makes it more than ever necessary to-day that sufficient machinery should be employed to secure pure middlings, from which only pure flour can be made.

Increasing Popularity of the Plansifter.

There have not been any very great changes in this class of separating machinery. Perhaps the chief one is the inauguration of systems involving a kind of purification between the breaks, but this was done many years ago, and subsequently discarded. In fact, old methods are revived after many years, just as fashions in dress recur again. The plansifter has been making headway of late, and some millers are now using it for making all the separations in the mill, including flour dressing, except on the rough stock at the tail, upon which one or two centrifugals are usually at work. As its name implies, the plansifter works in a perfectly horizontal manner—that is to say, there is no slope of the sieves to assist the stock in getting out of the machine, as in the case of ordinary rotary sieves. Mechanical devices are employed to propel it, such as a spiral wire, slats, or anything which prevents it travelling in circles and so causing a choke. All that is required is some device which shall break the circular travel of the stock, and by this means tend to propel it onwards along the channels. The machine has certainly made great headway during the past year, and it seems that there is a useful future before it. At the same time, millers are very divided as to which is the best, all the way round, the centrifugal mill or the plansifter mill. Good work, however, can be done in either case, provided the machine is in capable hands.

Improvements in Roller Mills.

Another development of the past year has been the growing tendency to set the rolls diagonally in the frame of the roller-mill. Until late years there were two types only—the horizontal roller mill and the vertical roller mill. Most—in fact nearly all of the so called vertical mills, however, had their rolls set at a slight angle from the perpendicular. Improvements have been effected in the mechanism for the adjustment of the rolls, and the reducing machine in the best flour mills was never so perfect as it is to-day. The frames are massive and solid, the feeds, whether by roll or tray, have been perfected, and altogether the roller mill made by the prominent British engineers cannot be excelled anywhere. Another change may be mentioned, and this is the tendency to lengthen the roller surface, so that where, a few years ago, flour mills were content with 70 inches of roller contact, now 100 inches, per sack, per hour, is by no means uncommon. This necessitates a thinner feed, which again means less likelihood of heating and less fire risk. And yet the Tariff Insurance Offices do not seem inclined to reduce the premium on mills with extended surfaces. It must not be forgotten, too, that an extended roller surface also means a larger silk area in the mill, especially when flour is dressed through such fine numbers as is the case to-day. It is not so long ago that Nos. 10, 11, and 12 silk were the usual flour numbers; now millers dress through Nos. 15, 16, and even 17. The reason for these fine numbers is to secure whiter flours, but the colour of a flour largely depends on the shadows cast by the granules of which it consists.

Washing and Conditioning.

More attention than ever is now being paid to washing and conditioning, and millers are beginning to realize that wheat is not put into water for cleaning purposes only, but to toughen the bran, so as to prevent the making of that tiresome product which is so hard to eliminate, bran powder. It is well known that it is most difficult to mellow such wheats as Indians, Taganrog, Hard Yellow Plates, and Goose Wheat. Such wheats resist the water in a marvellous way; in other words, it is most difficult to get them to absorb enough moisture. Indians may be washed twice and then dried at a very high temperature. Besides washing them twice, some millers steam them as well, so as to mellow them for the grinding. The process of conditioning is better understood than ever it was before, and it is certainly a great factor in profit-making. Another machine which is making headway is the emery scourer, a mahine in which about five-sixths of the inner case is covered with emery and the other sixth with perforated wire, through which the scoured dust is exhausted. The principal point about this machine is that the wheat is not scoured in the ordinary way by being struck with the moving beaters to the casing, but is swished round and round on the emery until it is propelled out of the case. It will be seen, therefore, that during the past year neither millers nor milling engineers have been standing still. The march of progress has been still onward, and there is no doubt the same will have to be recorded in another twelve months, and, perhaps, something more startling than can be named for the year 1905.

MILLER-FARMER.

Agricultural Imports.

The following is an account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended Dec. 16, 1905, together with the quantities, imported in the corresponding week of the previous year:—

Live and Dead Weight of Pigs.

SIR,—Your correspondent, G. G. C., asks, "What is a fair percentage to write off fat hogs of 18 stone live weight?" This will depend on the breed of the pigs and also on the food with which they have been fattened. The large and middle white Yorkshires will give the largest proportion of dead to live weight, but a fair reduction on an average would be about 20 per cent. The fat pigs at the Smithfield Show of about 280lb. lost about 50lb., or about 18 per cent.—PURVEYOR.

December 21, 1905.

Midland Notes.

SIR,—If proof were needed of the difficulty in writing farming reports applicable to large districts, your correspondent afforded it in your last issue, where he writes that "Farm work is more in arrear than any one thought likely at the beginning of winter." I am an old hand, but I do not remember a season when farm work was more generally up to time. Personally, I have seldom had my ploughing and other work so forward the week before Christmas. The next paragraph in his notes may afford the reason for the disparity pointed out; we have been carting water until within the last fortnight for our stock in the yards, and are still doing so at one farm. The under drains have not run for many months, and the land ploughs like unto February, if not March. Another point of difference; your correspondent writes, "On the west, Hereford is only just forming a Chamber of Agriculture, and on the other side little Rutland and Huntingdon are chamberless." As to the last small county, the statement is declared by a friend to be without foundation, as there is a chamber of agriculture boasting over two hundred very much alive members. The first annual meeting was celebrated in the month of November last, by a splendid dinner at Huntingdon, given to the members by the first and most popular president, Mr. Fydell-Rowley, of the Priory, St. Neots, who will blush on finding his good and generous deed recorded.—ANOTHER MIDLANDER.

December 19, 1905.

Season in South Wiltshire.

SIR,—This year, 1905, will soon come to a close, leaving behind it all its ups and downs in the farming line. I might say in this district the prospects have been slightly better than in past years. Sheep trade has been good throughout, which is a great help to farmers here. Wool also has fetched more money, and we hope it will still keep up. Beef appears a very poor business; a few fat cows are sent to market which fetch a very low price per score. Pig trade has sprung up again, and are now selling well. The hay crop made excellent and a fair average crop. Roots a very poor crop; seed was so long in coming up. The rain came too late to save the plants from being choked with weeds, and the fly very troublesome, hoeing being out of the question; you may see a few exceptional prices. Harvest started with us the later part of July, weather very favourable. Wheat crop a good one, with plenty of straw. Barley about average. Oats much below the average. Most of the winter cereals are now in.

December 20, 1905. T.

Season and Prices in Yorkshire.

SIR,—It has been a favourable harvest, and corn has yielded well, especially on the stronger soils, as the summer was rather too dry for the lighter soils. Prices for grain have been low, wheat ranging from 28s. to 30s., barley 25s. to 28s., and oats from 17s. to 20s. per quarter; barley yielded nothing like so well after potatoes as after turnips.

The potato crop varied a good deal, several of the much talked of new kinds being failures. Up-to-dates, grown from Scotch seed, have done as well as anything. Evergoods have done well, too, on land which is suitable for them. Prices have been very low. 45s. being about the top price reached, and it takes good samples all their time to make 45s. to-day.

The dry summer has been against the root crop, which is a good deal below the average, several farmers sowing their turnips two or three times over, and then not getting a crop. There were a few exceptional cases, where farmers got their seed in, in a showery time. Being such a dry summer, the hay crop was light, consequently hay and clover are making more money. Store cattle were not bad to buy in, but in a good many cases, did not get finished on the grass, and had to be taken into the folds to finish. Fat cattle have been a poor trade, but are rather on the improve; beef now making up to 7s. 6d. per stone

Sheep have been the mainstay of the farmer this year, making fair prices, mutton making up to 10½d. per lb. Wool has been making more money; Wensleydale wool in some cases making up to 17s. per stone. There has been the best trade yet known for Wensleydale rams, there being nothing like the quantity to supply the demand; there being a good trade for them in Scotland, and they were more sought after in Yorkshire than ever before; a good deal on account of wool making more money. Farmers who can breed a good heavy cart horse, suitable for town work, can always find a ready market; a good hunter can get sold, too, but animals of moderate class are a drug on the market. Store pigs have been fairly cheap; bacon and pork being fairly good to sell at prices varying from 6s. to 7s. per stone. Owing to the open backend, farmers are not often more forward with their work than they are at present. It has brought the wages of farm men down, many farmers doing with less hands, and a good many farm servants are still out of employment.

Owing to the favourable back end, there has been a fair quantity of wheat sown, which is looking well. If prices would only improve a little all round, there is a rather better prospect for the farmer.

December 20, 1905.

Rainfall and Temperature for 1906.

Mr. Clement's Forecast.

SIR,—It has recently been suggested in one of the great Metropolitan morning newspapers that it would be a great boon to cricketers, footballers, and others if the arrangement of their fixtures for the year could be made with a foreknowledge of the weather. With this object in view I herewith give the days in each month when unsettled, changeable, and showery weather may be expected from the beginning to the end of the year 1906.

In another table the colder days are given when the temperature will be under the average, and the milder ones when the heat will be over the mean for the time of the year.

The predictions are for London, but will apply to a great sweep of the country. If, however, it is particularly desirable to know with regard to any important event the kind of weather, I shall be glad to predict precisely what the weather will be for any given hour on any particular day for any part of the United Kingdom.

Number of days on which there will be more or less rain:—January 18, February 13, March 14, April 17 (a wet month), May 12, June 16 (wet), July 17 (very wet), August 10, September 15, October 27 (very wet), November 11, December 12.,

Temperature.—January: Mild to 7th, cold 8th to 15th, mild 16th to end. February: mild to 12th, cold 13th to 15th, mild 16th to end. March: mild 1st and 2nd, cold 3rd to 8th, mild 19th to 29th, cold 30th and 31st. April; cold 10th to 25th, mild before and after (a cold month). May: mild 1st to 3rd, 17th to 20th, 23rd to 29th; cold 21st and 22nd, and from 4th to 17th (a cold month). June: cold to 22nd, warmer after (a cold month, only nine days over 70 deg.). July: mild 6th to 8th, 12th to 14th, 19th, 22nd, and 31st, other twenty-three days cold (cold month, only eighteen days over 70 deg.). August: Mild 5th, 24th, 25th, and 28th to 30th, other days cold (cold month, only seventeen days over 70 deg.) September: 1st to 6th mild, 6th to 15th cold, 16th to 30th mild, fifteen days over and twelve below average (mild month). October: cold 6th to 9th, 13th to 16th, 19th to 21st; eight days under and twenty-three days over average (a mild month). November: Ten mild twenty cold days (a cold month). December: An average month, sixteen mild and fifteen cold days.

HUGH CLEMENTS.
Newton House, Barry Road, Dulwich, S.E.
December 21, 1905.

A Question of Trespass.

SIR,—Will you kindly let me know the following in the next issue of your valuable paper:—

1. Can a tenant farmer object to a public coursing meeting being held on his land, or impose restrictions if his landlord has given permission for such meeting to be held on his estate?

2. Can a man go on his neighbour's land to recover a bird flushed and shot on his own?

SUBSCRIBER.

[Unless by the terms of the lease or agreement the landlord has reserved the power to permit a public coursing meeting on the tenant's land. The tenant has the right to object or to impose restrictions as long as the tenant hires the land the land is his, and if he complies with the conditions of his letting the landlord has no right to interfere. With reference to your second question, a man has no right to trespass on a neighbour's land to recover a bird flushed on his own. If he does do so he commits a trespass; but I don't suppose any good sportsman would take notice of such a technical trespass as this. —BARRISTER-AT-LAW.]

"The Agricultural Annual and Mark Lane Express Almanac for 1906" is now ready. It contains specially written articles on all subjects of interest to a farmer. Send at once for a copy. Price 1s.; post free, 1s. 4d. "Mark Lane Express" Office, 3, Wellington Street, Strand, London, W.C.—[ADVT.]

Position in Wiltshire.

SIR,—I think I can fairly say, taking all things into consideration, quite an average season. Wheat, as was prophesied, the crop of the year, while oats are under average. Roots and the hay crop are good. Mutton sells well, and beef bad, and all prices are low, and I cannot help thinking it is only the keen business men who keep the wheels upright, leaving a profit out of the question, and many agriculturalists must be in a very shaky position, while there are others who apparently make headway.

The demand for farms to let is keen, and the land still is putting down to grass, and with Scotch sheep and young cattle, the cattle to fill up the numerous dairy breeds now kept. When I came here 20 years ago there were not six cows in the parish, this present day close on 250, milk from which goes to London market. Pedigree breeds and shire studs are on the increase, and agriculturalists generally are awaking to the fact that the best stock pays best.

This, I think, gives us a bright lining to the heavy cloud that has hung over us so long, and we hope, with an alteration of our fiscal policy, which undoubtedly will be for the benefit of the working classes of this country, by giving them good employment and good wages, and thereby create a demand for the produce of the land, and benefit agriculture. J. B. S.

December 21, 1905.

Stock and Crops in Aberdeenshire.

SIR,—The London Christmas markets (live cattle and dead meat) which have been lately held unfortunately have not been favourable to either the farmers or the dealers who make consignments to them. Dealers were purchasing very good well-finished cattle at moderate prices at the public sales, and also privately from the feeders, but still as a rule it is reported that their purchases will scarcely come out clear.

This is a matter of regret, as it discourages middlemen for some time to come, and while these men live on the farmers, still they scarcely can be cast altogether aside. With the farmers it was a foregone conclusion that they could not be paid by their fat cattle, inasmuch as in the spring, when they were bought in, prices for the best stores in forward condition were very high, and as has unfortunately happened in the interval prices of beef have fallen away considerably.

Judging from present appearances, prices of beef are to remain low for some time. Fortunately those farmers who purchase stores at this period of the year are laying them in at more moderate rates than has been current for a considerable time, and it will be strange if they do not pay for the fattening.

The value of oats has been advancing of late, and the tendency is for a further rise at present. The supplies on offer are in moderate compass, and so long as this position is maintained there need be little fear of worse trade. Barley has been a trifle stiffer just of late. It is reported that the distillers have their hands full of grain, so they need not be expected to be on the market for any considerable quantity till their lofts carry a lighter load than they do at present.

Since the Martinmas term there have been many men going idle in the market places, and there is a general scarcity of employment. In the meantime everything betokens a hard winter on the working man who cannot find employment. J. B.

December 21, 1905.

Canadian Cattle Question.

SIR.—When the new Parliament comes into power strong efforts will be made to induce them to open the ports to the free importation of Canadian store cattle. Now is the time, therefore, for all really interested in this question to consider the subject impartially, as it materially affects the interest of three parties. First, those who breed cattle and sell them as stores. Second, those who purchase stores for feeding purposes.

Third, those who breed pedigree cattle for exportation.

If free importation of Canadians was again restored, it stands to reason that the interest of the first would suffer, and consequently many would require to give up breeding. This would retaliate against the second party, by raising the price on them. Consider also, that although at present no disease may exist in Canada it might break out at any time there, or more likely be generated in transit over sea, through confinement between decks in vitiated air, and develop itself sometime after landing, as frequently has happened in a much shorter passage from Ireland. This would immediately affect the interest of the third party, by stopping the exportation of their stock. It would also endanger all parties from the spread of infection in the country. The real safety, therefore, for every one concerned is that all stock imported for consumption should be landed in carcase only.

The present system of allowing live cattle to be transported over the ocean for slaughtering purposes is cruelty to animals. It is also against the interest of feeders of stock, as the immense quantity of offals thrown on the market at one time on the arrival of steamers retaliates against the price of home-fed bullocks to the extent of the value of their offals. If carcase importation was resorted to it would more than compensate feeders for the loss of free importation of stores, and at the same time grant security from infection at all. Such being the case, it would be better for the three parties to co-operate, and petition the Minister of Agriculture to settle the question, by introducing a Bill into the House of Commons confining importations to carcase only.—Yours, etc.,

CHAS. RINTOUL.

Buxted, Sussex, December 22, 1905.

The Burdens upon Land.

At a well-attended meeting of members of the East Sussex Farmers' Club, held last week, Mr. E. B. Barnard, M.A., J.P., of Sawbridgeworth, Herts, read an interesting paper on "Rating and Taxation and how they affect local authorities." Mr. Barnard, who is vice-chairman of the Hertfordshire County Council, remarked that the object of his paper was to call attention to the enormous increase which had taken place in the burdens upon land. The relative position of agricultural land and other kinds of property to-day, he said, was vastly different from the state of things which existed when "The Statute of Elizabeth" set in motion the order of procedure of rating, and there could be little doubt that if the questions of taxation of rating were now under consideration, without reference to or knowledge of what had hitherto obtained, agricultural land would be greatly relieved of burdens which were not only oppressive and fatal to the vitality of the important industry of agriculture, but absolutely unfair towards those who owned or occupied land in this country.

He attributed these "injustices" to the general policy of the country, and, in regard to the question of rates, he argued that national expenditure should include all services which were apparently for the interests of the country as a whole, while local expenditure should only include money expended in a locality for the direct convenience and benefit of those who lived within the area. Under the heading of national services he included police and police superannuation, criminal prosecutions, the Poor Law generally, vaccination, the registration of births and deaths, maintenance of pauper lunatics, expenses in connection with main roads and bridges, and education. For these services, he contended, the Exchequer should provide a great proportion of the funds required, but not by giving a specific grant for each service, which practice often led to indiscriminate and reckless expenditure.

He suggested that the safest course would be to hand a bulk sum to the local authority, such sum being a fixity for a terminal period, and this to be a proportion of the whole amount required. As to local services, they should comprise benefits distinctly rendered to the ratepayers. He believed that both urban and rural ratepayers were unfairly treated, to the advantage of the general taxpayer.

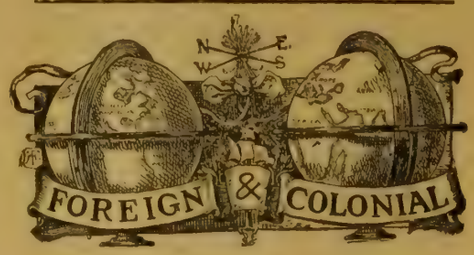
The Great Eastern Railway Company announce some important improvements in their train service to and from Felixstowe, one of the East Coast watering-places, which, owing to its Southern aspect, record sunshine, and mild temperature, is specially recommended by the medical faculty as a winter resort. It has been arranged that every Saturday during the winter months a connection with Felixstowe, with through carriages from London, will be run off the express train leaving Liverpool Street at 1.30 p.m., arriving at Felixstowe at 3.48 p.m.; also, every Sunday a new train will leave Felixstowe Beach at 6.25 p.m., and Felixstowe Town at 7.33, arriving at Liverpool Street at 10.5 p.m.

British Possessions beyond the Seas AND THEIR London Representatives.

NOVA SCOTIA APPLES.

An Exhibition of NOVA SCOTIA APPLES, selected and forwarded by the Nova Scotia Government is now on view in the Canadian Court at the Crystal Palace.

Specimens may be loaned for exhibition at local Shows upon application to MR. JOHN HOWARD, Agent General for Nova Scotia, 57a, Pall Mall, London, S.W.



The First Agricultural College in Western Canada.

The first agricultural college to be established in Western Canada is now nearing completion, within five miles of the City Hall, in Winipeg. The main building is beautifully located, about a hundred yards from the banks of the Assiniboine river, and at a convenient distance from it stands the science and dairy building, powerhouse, stock judging pavilion, principal's residence, and horse and cattle barns. These buildings are constructed of the best available material, and the style of architecture is calculated to do credit to the future of Manitoba's greatest industry agriculture.

In its teaching, this institution will aim to meet the needs of the young men of the West who desire to become familiar with the fundamental principles of scientific agriculture. The studies will, nevertheless, be directed as practically as possible, and while no attempt will be made to teach the elementary movements of such common farm operations as harnessing horses, driving waggon, or cleaning stables, all teaching will be calculated to admit of easy and practical application by the student upon his return to his farm. The principal subjects to be taught are animal husbandry, agriculture, dairying, horticulture, forestry, veterinary science, poultry-keeping, farm mechanics, English and mathematics, economies of agriculture, and Parliamentary practice.

The study of animal husbandry will include the breeding, judging, feeding, and management of the various breeds of stock, special emphasis being placed upon those most suitable to Western Canada. Agriculture likewise will include such topics as soils, soil cultivation, crops, crop rotation, plant breeding and improvement, weeds and their eradication, and farm management.

In the dairy department, the dairy cow, her selection and productiveness, ripening and care of cream, cream separators, churning, care and marketing of butter, will be among the subjects dealt with by a student of the regular agricultural course.

Farm mechanics will include blacksmithing and carpentering, and an opportunity will be afforded students of becoming familiar with the use of the commoner tools used in both these lines of work. Instruction also will be given in the principles underlying the construction and operation of farm machinery.

In order to qualify for admission to the two-year course, it will be necessary for each candidate to satisfy the authorities of the college, first, that he has spent at least two summers on a farm, and, second, that he possesses such an English education as will enable him to profit by attendance on lectures. It is not the intention, however, to debar from the benefits of the college any farm boy whose early education has been neglected. This college is for the farmers' sons of Manitoba and the West, and every effort will be made to meet their needs for a higher education, no matter upon what grade they may wish to enter.

The above interesting facts appeared in the Montreal "Family Herald and Weekly Star," of November 22, and were written by Professor W. J. Black, B.S.A., Principal of the Manitoba Agricultural College.

The Buckinghamshire County Police report an outbreak of anthrax at Manor Farm, Wooburn, near High Wycombe, where a farmer named Reeves has already lost a horse through the disease. Three more will have to be slaughtered. Rigid precautions have been taken.

CORN MARKETS.

LONDON.

Mark Lane, Wednesday.—The market was of a holiday character and prices generally tend in buyers' favour. Foreign wheats were dull and easier, and for No. 1 Northern Manitoba ex ship 34s was paid. Maize quiet, with an easier tendency. Mixed American, ex ship, to arrive, sold at 22s to 22s 6d. For La Plata landed 24s 3d is bid, and 23s 6d to 23s 9d is asked, ex ship. Flour steadily held. Iron Duke nominally 23s. Barley quiet at last quotations. Odessa Nikolaieff offers at 20s 6d. Oats attract but little attention. Russians, 38lb, are obtainable at 1s 7 to 17s 9d, and 38lb American at 17s 6d.

COUNTRY.

Ashford, Tuesday.—The market was of a holiday character, very little business being done. Wheat was quoted at 28s to 30s; malting barley, 28s to 31s; Mazagan beans, 28s; tick beans, 31s to 32s; oats, 18s to 22s; maize, 27s to 28s; peas, 29s to 30s; foreign grinding barley, 23s to 24s per quarter; flour unchanged.

Banbury, Thursday. Wheat, red (new), 27s to 28s 6d per quarter; barley, 24s to 30s; beans (new), 30s to 32s; (old), 34s to 36s; oats, 17s to 23s; peas, 29s to 31s.

Barnsley, Wednesday. Though the market was fairly attended, business was only slow, but generally prices ruled very firm. Wheat was quoted 11s 3d to 12s per load, and oats (white) to 20s, ditto black 16s to 18s per quarter.

Birmingham, Thursday.—The attendance was not so large as usual, and business was quiet in all department. Quotations remained steady, English wheat realising 11s to 11s 6d per bag. Grinding barley was 6d dearer, and made 21s per quarter Sharpness. Maize was unaltered; flat maize (old), 4s 10½d; new, 4s 8d per cental Liverpool; Plate maize, 4s 10d per cental Liverpool. Oats were firmer. English white, 20s to 21s; black, 19s 6d to 20s 6d per quarter; English beans, 12s 6d to 13s per bag.

Boston, Wednesday.—Wheat, 29s 6d; malting barley, 24s to 28s; grinding barley, 24s to 25s; beans, 31s to 32s; maize, 26s per quarter.

Brighton, Thursday.—Barley 28s to 33s; grinding ditto, 22s to 23s; oats, English, 18s to 21s; peas, 30s to 31s; beans, 32s to 35s. Not much wheat on offer. Holiday market and prices as last week. Small attendance.

Bristol, Thursday.—Small supply of English wheat at last week's prices, 28s to 29s 6d; foreign wheat, moderate business, and values unchanged, 33s 6d to 36s 6d; grinding barley, 3d dearer, 21s to 21s 3d; maize fair request, slightly in buyers' favour, 24s 3d to 25s 6d. Oats steady; black, 17s 3d to 18s; white, 16s 3d to 21s.

Bury St. Edmunds, Wednesday.—Wheat in short supply; trade quiet at last week's prices; reds or whites, 28s to 30s; rivets, 29s per quarter. Barley supply moderate; trade steady at last week's prices. Feeding corns and stuffs all firm on the week.

Chichester, Wednesday.—New white wheat, 30s to 31s; new red ditto, 30s to 30s 6d; barley, 28s to 32s; grinding ditto, 20s to 21s 3d; oats, English, 17s 6d to 22s; peas, 30s to 31s; beans, 32s to 33s; maize, 25s 6d to 26s; flour, 25s to 27s. Fair attendance and a good trade, considering the near approach of Christmas, but small quantities on offer.

Driffield, Thursday.—A fair supply of grain. Wheat prices were rather easier at 29s to 29s 6d, the latter price for delivered. Barley, 22s to 27s; oats, 18s to 19s per quarter.

Dublin, Thursday.—Numbers in market: Beasts, 1,540; decrease, 2,485. Sheep, 2,272; decrease, 4,795. Calves, 14; decrease, 26. A limited supply of cattle and sheep on offer, but quite sufficient to meet the demand. The proportion of choicely finished cattle was small, and these sold early at last week's full rates. Middling and rough sorts met a tedious trade. Choice suitable sheep for home and export use in fair request at last week's prices, rough and inferior lots neglected, several lots remaining unsold. Cattle, live weight (best), 28s to 33s per cwt.; secondary and inferior sorts, 24s to 28s per cwt. Mutton, dead weight, 6½d to 7¾d per lb.—GANLY, SONS AND CO.

Glasgow, Wednesday.—Wheat and flour met a rather better demand at unchanged prices. Maize, being more plentiful on quay, declined in price about 1s. per 280lbs. for flat, but was unchanged for round. Barley is about 3d higher. Oats rather firmer. Beans and pease steady. Oatmeal quiet.—GIBSON AND CLARK.

Ipswich, Tuesday.—Short supply of wheat; trade steady at last week's rates. Reds, 29s to 31s; whites, to 31s 6d per 504lb. Very small supply of barley; trade for all descriptions firm, at fully late rates. Best, 30s to 32s; runs, 28s to 29s. Oats steady. Maize unaltered. Beans and peas firm.

Leeds, Tuesday.—Wheat has experienced an improved demand during the past week, Russian parcels on passage meeting a good sale at very full rates, and with smaller shipments, decreasing home supplies, and continued drought in India. Confidence has further increased, last week's prices being generally exceeded to-day. Barley slow and values irregular. Maize 3d lower. Beans firm. Oats steady.—DUNNS AND CO.

Louth, Wednesday.—The market is of a holiday character. Small show of wheat, and quiet trade at 28s 6d to 29s, though growers are asking 30s; oats, 18s to 20s; beans, 30s to 31s; barley made late prices.

Manchester, Wednesday.—Clover, 52d to 6d; straw, wheat, 3½d to 3¾d; oat, 3¾d.

Manchester, Thursday. — English wheat in small supply, but firm at late rates. Foreign unchanged. Flour quiet. Indian corn, 1d to 1½d lower. Oats, English and foreign, firm, and the turn dearer. Foreign barley in sellers' favour. Beans unchanged. Peas rather lower. Feeding stuffs steady and unchanged.

Plymouth, Thursday.—General holiday tone. Prices steady at late rates.—ORLANDO DAVIS AND CO.

Ripon, Thursday. The market presents a holiday appearance, little business being done. Malting barley firm. Last week's prices are maintained. New wheat, 28s to 29s 6d; foreign wheat, 33s to 33s 6d; grinding barley, 23s to 24s; malting barley, 25s to 28s; new oats, 18s to 20s; round maize, 25s 6d to 26s; flat maize 25s 6d to 26s 6d per quarter.

Stockton, Wednesday.—English wheat made 30s to 30s 6d per quarter. Foreign wheat in limited demand at last week's prices. Oats 6d dearer. Maize lower.

Worksop, Wednesday. — Moderate attendance, with very small show of grain. Barley rather sluggish, except for best samples, for which there was a good inquiry, and late top prices were easily realised. Oat scarce and firm. White wheat, 29s to 30s; red wheat, 28s to 29s; best malting barley, 29s to 31s, an advance of 1s per quarter; secondary qualities, 27s to 29s; grinding barley, 24s to 26s; white oats, 19s to 20s; black oats, 18s to 19s; round maize, 25s to 26s; flat maize, 23s 6d to 25s, an increase of about

1s 6d per quarter; new beans, 34s 6d to 35s 6d; old beans, 36s to 37s per quarter.

PROVISIONS.

London, Monday.—Bacon: In consequence of the approaching holidays, the bacon market was very quiet this week, especially for all Danish and Canadian, for which sellers were taking several shillings less than last week. Butter: The butter market was firm, and all selections in good request, especially for finest goods, which cleared quickly on arrival. Lard: The lard market was quiet, and Irish quoted at less money.

HAY AND STRAW.

Whitechapel, Thursday.—Good supplies on offer this morning met with a fair demand. Best clover, 72s to 80s; inferior ditto, 60s to 70s; specially picked hay, 72s 6d; good, 60s to 70s; inferior ditto, 45s to 57s 6d; mixture and sainfoin, 67s to 72s 6d; straw 25s to 33s per load.

WET GRAINS.

London, Friday.—Wet grains: Prices are somewhat easier on the week, owing to continuous of cold weather and extra brewings to make up for closing on Monday and Tuesday. Ale, 19s to 20s; and porter, 15s 6d to 16s 6d per ton. Wet Distillers' Grains remain at 36s per ton. Pressed white distillery meal, 35s per ton. Dried grains are without change, from ale 102s 6d, mixed 97s 6d, and distillers 115s per ton. Dried distillery meal, containig 45.80 per cent. oil and albuminoids, without change, 117s 6d per ton. Molasses feed, 90s per ton. Pure cane molasses (treacle) for cattle feeding, 92s 6d to 93s 9d per ton, according to rails. All the above are free on rail London.—HAMLYN AND CO., 37 and 39, Mark Lane, E.C.

WOOL.

London, Friday.—English—per pk. of 240 lb.—Fleeces S. Dn. Hogs, £14 to £14 10s.; halfbred hogs, £12 10s to £13 10s; wethers, £12 5s to £12 15s; Kent fleeces, £12 to £12 10s; South Down ewes and wethers, £13 10s to £14 10s; Leicester ditto, £11 15s to £12 5s. Colonial—per lb.: Vic.—Fleece super, 1s 11d to 2s 1d; scoured good, 2s 1d to 2s 2d; scoured average, 1s 11d to 2s; greasy average to fair, 1s 1½d to 1s 2½d; N.S.W. Scond. average, 1s 8½d to 1s 9d; greasy average, 11½d to 1s; S. Aus. greasy average, 9d to 9½d; N.Z.—Scoured average, 1s 9½d to 1s 10d; greasy average, 1s½d to 11½d; Cape, scoured super, 1s 10d to 1s 11d; fleece average, 10d to 10½d; greasy average, 7½d to 8¼d; Natal—scoured, 1s 5d to 1s 6d; greasy average, 8½d to 9½d. Crossbreds—Grs.: Vic. good to super, 1s 2d to 1s 3d; New eZaland fine, 1s 2d to 1s 3d; medium, 1s 0½d to 1s 3½d; coarse, 10½d to 11½d.

OIL SEEDS.

MARK LANE, FRIDAY,

December 22.

The demand for Linseed is not so good as it was a week ago, but an improvement is anticipated after Christmas. Rapeseed is firm and Poppyseed is appreciating in value. Sunflower seed is rising in price as the Russian crop this summer proves to have been much below the average.

LINSEED. per 416 lb.	s. s.
Indian	42/6to 44
Argentine	40,9to 42
Russian	40 to 42
Morocco	47 to 48
Turkish	43 to 44
Persian	41 to 42
Dutch	42 to 46
American	41 to 42
RAPESEED. per 416 lb.	
English	48 to 54
Dutch	44 to 48
Gazerat	43 to 44
Ferozepore	39 to 44
POPPYSEED. per 377 lb.	s. s.
Indian	44 to 45
HEMPSEED. per 336 lb.	
Russian	40 to 46
SUNFLOWERSEED. per 112lb.	
White	17 to 18
Black	12 to 14
CANARYSEED. per. 464 lb.	
Spanish	80 to 100
Turkish	61 to 63
COTTONSEED. per 2,240 lb.	
Egyptian	115 to 117
Indian	98 to 100

Prices for linseed admit of the following comparison:

Per Quarter.	Indian.	Argentine.
Dec. 22, 1905	42s 3d	40s 9d
Dec. 23, 1904	33s 9d	32s 0d
Dec. 24, 1903	34s 6d	31s 3d

In 1902, however, linseed fetched 40s. to 50s., and was a decidedly strong market. Poppyseed grows a little in favour; the farmer begins to find that it is rich in oil, and the sort sold at Mark Lane, of course, has no soporific effect. The new Indian crop is offered for April shipment at 42s. per 377 lb., and there are quite a reasonable number of buyers.

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

The wheat fields, which were sown in October, show a regular growth, and the colour of the pushing blades is healthy. There are scarcely any bad patches, so that germination seems to have been above the average for sureness and levelness of start. November sown wheat does not yet make an appearance, but winter oats are often up, and where visible are looking well. Septmber sown rye is robust, and if a feed for sheep is needed in February it will be fully ready by then. The threshing of wheat has not been quite so brisk as at the beginning of the month, but barley threshings have proceeded with rapidity, especially in Essex, Suffolk, Norfolk, and Lincolnshire. The sales of oats continue small, not because demand is poor, but because farmers part grudgingly with their stock. Charity, as the saying is, begins at home, and the farmer has to consider his own horses.

The Continental reports indicate that there has been a favourable autumn for wheat and rye sowings from France to Russia, and that on the whole advantage has been taken of the occasion. The newly-sown corn is stated to have come up well.

The Argentine and Australian wheat harvests are now in progress. The weather is reported by cables at satisfactory. Argentine expects to have an exportable surplus of three million tons of wheat, a prodigious quantity, and one likely to influence trade in 1906 very seriously. The report surplus of linseed is likely to exceed 600,000 tons, and of maize to equal two million tons; but the last-named crop will not be ripe before March, and the two million ton export estimate is simply based on an average yield per acre on the extended acreage.

The markets for wheat since the 18th have been rather weak, and a slight reduction has been occasionally allowed on Manitoba, America, and Argentine descriptions. Trere is such a scarcity of Indian that prices are fully maintained, and Californian is also quite as dear as a week ago. Australian, New Zealand, Russian, and Roumanian kinds may be called steady, but there has not been much demand. Flour has suffered from the poor sale of bread, and is not likely to become a good trade unitl the baker is doing well. Malting barley fully keeps the prices of the 18th, and now and again Californian is 6d. dearer. The tendency in feeding barley is quite the other way; the holders who have waited for a Russian crisis have found it only on the newspaper placards, and with ample supply of grain from Black Sea and Danubian ports the buyer simply laughs at the repeated cries of "Wolf! Wolf!" The decline on Russian and Roumanian barley is nearer 6d. than 3d. per quarter; on the other hand, supplies of Persian appear to be drying up, and value accordingly tends to advance. For oats the prices asked are comparatively high, and 17s. for Russian stuff of poor weight and character is resisted by buyers. American oats at 18s. per 320lb. have the preference, and at 17s. would sell well. The large shipments from America since October have not depressed the trade, as was anticipated, for the small supply of British oats, combined with Russian disturbances, has made it possible to keep up value. Should Russia be a fairly good shipper in January and America a free shipper, prices for 304lb. to 320lb. oats would go lower. For 336lb. oats value is fully maintainable.

Maize is a trade upon which comment is a matter of days—that is to say, the first question which the holder asks the buyer is, not "What will you pay!" but "When do you need it delivered?" The American new crop is, in motion and prices, in January are likely to be 2s. lower than they are to-day. Beans and peas tend to appreciate in value, owing to the extremely small supplies on passage. But linseed is weaker from the 18th, and tends to drag with it both rapeseed and cottonseed.

The supply of foreign flour since harvest shows that the receipts from the United States, as compared with 1904, have nearly doubled. It is strange that purchasers of Canadian flour have fallen off. France meets with great difficulty in keeping a footing on English exchanges. This is a great tribute to modern mills in this country, for there was a time when the Taylors and Ranks of London hardly took the position of the Corbeils and Darblays of Paris. Nowadays, as the phrase runs, the case is altered. We have increased by 21,000 sacks our purchases of Hungarian flour; but this is, if anything, an index to increased prosperity in the confectionery trade. Argentine goes on shipping flour, but the London market gets but very little of it. Australia is developing it nicely, but an extension of milling in the Antipodes is to a large extent dependent on the possibility of finding buyers for bran, pollard, and middlings.

The increase in American maize shipments is continuous, and is bound to exert a great influence on trade as soon as the New Year is with us. The following are the figures since November 23:—

	Quarters.
Nov. 16-23	96,000 shipped.
Nov. 23-30	127,000 ,,
Dec. 1-8	232,000 ,,
Dec. 8-15	281,000 ,,
Dec. 15-22	390,000 ,,

Other American shipments for the seven days ended 22nd inst. were wheat 253,000 qr., barley 36,000 qr., oats 105,000 qr., and flour 108,000 sacks.

Sales of English wheat show a remarkable steadiness, as will be seen from weekly figures, since November came in:—

	Quarters.
Nov. 1-8	200,000 sold.
Nov. 8-15	195,000 ,,
Nov. 15-22	219,000 ,,
Nov. 22-29	193,000 ,,
Nov. 29-Dec. 6	233,000
Dec. 6-13	205,000 ,,
Dec. 13-20	200,000 ,,

Thus the first and the last week on the record each show 200,000 qr., while the range between has been from 193,000 to 233,000 qr.

Imports of wheat have been fairly heavy, the returns for the last seven weeks being as follows:—

	Quarters.
Nov. 6	380,000
Nov. 13	364,000
Nov. 20	392,000
Nov. 27	362,000
Dec. 4	423,000
Dec. 11	354,000
Dec. 18	484,000

The imports of flour in detail have already been commented on. The totals since harvest have been:—

	Sacks.
Sept. 1-Dec. 22, 1905	1,931,000
Sept. 1-Dec. 23, 1904	1,566,000
Sept. 1-Dec. 24, 1903	2,870,000

Imports of barley last week were 117,000 qr., of oats were 53,000 qr., and of maize were 280,000 qr. It was only in the case of maize that any excess was shown.

The supply of maize on passage on 22nd inst. was:—

	Quarters.
1905	755,000
1904	775,000
1903	860,000

No excess of supply, therefore, has yet occurred, and, as stocks are very low, holders may still hope to unload without a loss being sustained.

The visible supply in America is mounting, and is already 30 per cent. higher than at this time last year. Returns for the 22nd inst. are as follows:—

	Quarters.
1905	899,000
1904	633,000
1903	652,000

The supply of barley on passage on the 22nd was thus made up:—

	Quarters.
Russian	150,000
American	55,000
Californian	180,000
Asiatic	100,000
Total	485,000

These figures, however, do not include Roumania or Persia, to which countries perhaps 50,000 and 25,000 qr. respectively may be attributed. In this case the real total on passage would be 560,000 qr.

Sales of English barley since harvest have been:—

This season, 2,393,000 quarters at 24s 5d per quarter.
Last season, 2,292,000 quarters at 24s 11d per quarter.

The slight increase in the pressure of barley on sale almost exactly corresponds with the slight decline in the price realised.

Sales of oats at the statute markets since September 1 have included 461,000 qr. of English, against 569,000 qr. last year. This reticence on the part of growers has sent the price up from 16s. to 16s. 10d. per qr.

Indian linseed is not quite so dear as a week ago, but the figures of shipments seem to argue that holders can afford to wait for a revival of demand. Since January 1 1,804,000 qr. have been shipped, against 2,818,000 qr. last season. Indian rapeseed shipments also show a great decline, the figures being 620,000 qr. this year (January 1-December 22), and 1,400,000 qr. in the same period of 1904. Egypt remains the dominant factor in the cottonseed trade, but India is gaining ground. In 1904 total shipments were 90,000 tons, while 1905, in fifty completed weeks, has already shipped 118,000 tons.

LATEST MARKETS.

MARK LANE, FRIDAY, December 22.

[FIRST REPORT.]

The market to-day was fairly well attended, and considering that no deliveries could be expected this side of Christmas business was rather good. The purchases were mainly non-speculative and for delivery before the end of the year, but in maize a rather free trade was done for near futures—i.e., January delivery at 20s. 9d., and February delivery at 20s. 6d. per quarter flat corn. For yellow the price was about 2s., and for round about 5s. higher than for flat of like date of delivery.

English wheat was in bettered condition, and made fully previous prices without difficulty, but foreign receded 6d. for all sorts, except Russian, of which supplies in January threaten to become small.

Barley was quiet for all sorts, but holders of malting quality were confident. Oats are a steady trade, with English, Scotch, and New Zealand types in request.

CLOSE OF THE MARKET.

THE MARKET CLOSED WITH A FEELING OF QUIET CONFIDENCE IN VALUES, BEING ON A HEALTHY BUSINESS BASIS. TRADE IS REASONABLY PROSPEROUS, AND BUYERS EXCHANGED WITH SELLERS HEARTY WISHES FOR A HAPPY CHRISTMAS.

THE FLOUR TRADE.

MARK LANE, FRIDAY, December 22.

London flour was dull but steady, with Seth Taylor's Households at 25s. per sack ex mill, London terms.

Country flour receded 6d. per sack for ordinary, but was fairly steady for special patents.

American was quoted 25s. 6d. for Ohio, 26s. 9d. for Duluth, 27s. 6d. for finest Spring Patents on passage, and 28s. 6d. arrived.

Some fine flour from Germany made 27s. 6d. to 30s. per sack. Prices for French, Australian, and Hungarian were without change.

Rye flour met with some inquiry, especially from German bakers. The best realised 24s. per sack, and good secondary made 22s. 6d. per sack.

Farina met with a fair demand at ten guineas per ton for "best," while "prime" (a deceptive name for second grade) realised £10 per ton.

Christmastide brings a good inquiry for oatmeal, a good many English families using it for children at breakfast during the Christmas holidays, while ordinary uses also show an extension. To-day £14 per ton was paid for the best Midlothian, £11 7s. 6d. for the Grampian and Deeside brands. Oat flour made £16 10s. per ton for best Midlothian, and £14 12s. 6d. for Grampian, while Brose meal realised 28s. per sack cash, and £12 5s. per ton was paid for Canadian "rolled" oats.

LONDON TERM MARKET.

This market is open to elected members only, and is held at the Baltic Club, St. Mary Axe. No business except for future delivery is done, and the smallest quantity that can be purchased is 1,000 quarters, or 4,800 cental.

Prices quoted on Friday at the close of the day's trade were :—

WHEAT (per cental).

No. 2 American Red	6s. 11d.	Dec. delivery.
,, ,,	6s. 11d.	Jan. ,,
,, ,,	6s. 11d.	Mar. ,,
,, ,,	6s. 10d.	May ,,

MAIZE (per cental).

American	4s. 3d.	February delivery.
,,	4s. 4d.	May ,,

There were no buyers of maize for January delivery.

FRUIT AND VEGETABLES.

Manchester, Thursday.—Yorkshire Warps, 7s to 9s; Sands, 6s to 7s; Cheshire, 4s 6d to 5s 6d per load; Irish, 2s 9d to 3s per cwt; turnips, washed, 30s to 35s; carrots, washed, 40s per ton.

GRAIN AND FLOUR FACTORS REPORT.

Offals.—Bran in active demand, with increasing firmness in prices.—GREENHILL BROS. (Belfast).

Flour.—Trade continues dull; no new feature to report.—GREENHILL BROS. (Belfast).

Flour.—Trade to-day has been very quiet, owing to the approaching holidays. Prices are nominally unchanged, but there is not sufficient business to test values.—T. S. MEDILL AND SONS, LTD.

Milling Offals are firm at last Monday's prices. Mills keep quite clear.—JOHN BAWCOMB AND CO.

FEEDING STUFFS.

Hull, Tuesday.—Linseed: The arrivals are 10 quarters from Harlingen, 750 Libau, 1,000 Riga, 4,559 St. Petersburg; total, 6,319 quarters. Linseed has been somewhat excited, and during the week prices rose rapidly. At the close re-sellers securing profits has brought a quieter feeling and values of forward positions are 6d. to 9d under the best. River Plate: Spot 41s paid, same the value afloat and November-December; Jan.-Feb. sold up to 40s 9d, now offering at 40s. Cottonseed: The market remained quiet, unchanged for Egyptian to close of last week, but yesteday there was a firmer tone, and £5 15s paid spot, £5 16s 3d January; to-day, however, there is a quieter feeling, with sellers at these prices, and no sales reported; £5 17s 6d nearest Feb.-March. Bombay has been more inquired for, and business done at up to £4 19s December, £4 18s 6d January; but the tendency for this description also is easier to-day. Oilseed cakes.—Linseed cake: A quiet demand, with prices 2s 6d per ton dearer. Russians about exhausted, and future supplies unpromising. Cotton cakes: A steady demand, best unchanged. Bombay, 2s 6d per ton dearer and deliveries backward.

Wednesday.—Barnsley: 5 and 6. Boston: 7. Goole: 7. Holsworthy: 8. Keighley: 7 and 8. Kirbymoorside: 8 and 9. Knaresborough: 8. Louth: 10. Market Drayton: 7 to 9. Market Weighton: 9 and 10. Newton Abbot: 1s 4d to 1s 6d per dozen. Northallerton: 7 and 8. Stockton: 5 and 6. Truro: 1s 3d to 1s 4d per dozen. Uttoxeter: 2s 7d to 2s 9d per score. Worksop: 2s 8d per score.

Thursday.—Axminster: 1s 7d to 1s 8d per dozen. Birmingham: 7 and 8. Brigg: 9. Driffield: 9 and 10. Evesham: 1s to 1s 2d per dozen. Honiton: 1s 9d per dozen. Kidderminster: 7. Penistone: 8. Plymouth: 6. Ripon: 8 and 9. Scarborough: 7. Wellington (Salop): 9 and 10. Wetherby: 7 and 8.

CHEESE.

Glasgow, Wednesday.—Arrivals of cheese were moderate, but the prices asked by holders materially checked sales. Only a limited business was done. Values are firm owing to the high prices sought for Canadians. Home Cheddars, 60s to 64s per cwt., Dunlops, 58s to 62s per cwt. HOPS

London, Monday.—W. H. and H. Le May, 67, Borough, London, reports:—There is nothing fresh to report, the market is quiet, and it is expected that it will remain so until after the Christmas holidays are over. Stocks to be carried over to the New Year are the smallest for many years.

GAME AND POULTRY.

Smithfield, Thursday.—Supplies were on a heavy scale, and experienced fair support. Quotations:—Yorkshire fowl, 3s to 3s 6d, Boston 2s 6d to 3s 6d, Essex 3s 3d to 3s 9d, Surrey, 3s 3d to 3s 9d, Sussex, 2s 9d to 3s 6d, Welsh, 2s to 2s 6d, Irish, 1s 9d to 2s 3d; turkeys (cock), 9s to 12s, ditto (hen), 4s 9d to 6s, geese, 4s 6d to 5s 6d; country ducks, 2s 6d to 3s 3d; Bordeaux pigeons, 10d to 1s, feathered, 7d to 9d; wild rabbits, 8 to 11d, tame, 1s 3d to 1s 8d each; Australian rabbits, 6s 6d to 8s 6d per dozen; pheasants, 4s to 4s 9d; partridges (young), 3s to 3s 3d; old, 1s 6d per brace; English hares, 2s 6d to 3s, leverets, 1s 6d to 1s 9d, Scotch hares, 1s 6d; wild ducks, 1s 6d to 1s 9d, pintail, 1s to 1s 2d, widgeon, 8d to 10d, teal 6d to 9d, woodcock, 2s, snipe 6d to 1s, golden plover, 1s 2d, black, 7d each. Venison: haunches, 6s to 9s, forequarters, 2d per lb.

THE BALTIC.

The Baltic, Friday, 3 p.m.

STATE OF TRADE.

No change in the prices asked for wheat cargoes has occurred since Monday, but maize is held more steadily; and, on the other hand, cargoes of barley, oats, linseed, and cottonseed are the turn in buyers' favour.

BUSINESS DONE.

WHEAT.—Blue Stem, 32s 9d per 500 lb, prompt shipment; Walla Walla, 32s 3d per 500 lb, prompt shipment; Red Walla, 31s 6d per 500lb., prompt shipment; Bahia Blanca, 33s per 504lb., February shopment; Rosario, 31s 3d per 480lb., January shipment; No. 1, Northern Manitoba, 32s 6d per 480 lb., on passage; graded Red Winter, 33s 6d per 480 lb., January shipment; graded Red Winter, 33s 9d per 480lb., April shipment.

MAIZE.—American, 21s per 480lb., January shipment; American, 20s 9d per 480lb., February shipment; Argentine, 23s 6d., on pasage; Argentine, 21s 3d per 480lb., May shipment.

BARLEY.—Odessa, 20s per 400lb, on passage; Crimean, 19s 6d per 400lb., prompt shipment.

OATS.—American, 16s per 320lb., prompt shipment.

LINSEED.—Calcutta, 42s 3d per 410lb., arrived; Argentine, 41s per 416 lb., January shipment.

COTTONSEED.—Egyptian, £5 13s 9d per 2240lb., January shipment; Bombay, £5 18s 9d per 2240lb., January shipment.

AMERICAN GRAIN CROPS.

The official report of the American Board of Agriculture for 1905 was issued on the 20th inst. This is an annual return, and is quite distinct from the monthly Bureau Reports with which it is so often confounded. According to telegraphic summaries, which reached London on the 21st, the wheat yield is 692,900,000 bushels, that of maize is 2,707,904,000 bushels, that of oats 953,216,000 bushels, and that of barley 136,651,000 bushels. These figures are in close agreement with the estimates given in this journal, but the trade will be surprised to learn that the average weight of the new wheat in America is only 456 lb. to the quarter. This is a material discount off the favourable Bureau Reports.

RICE.

London, December 22.—Rangoon 7s. to 7s. 3d. per cwt. Siam 6s. 9d. to 7s. per cwt. Market dull, but expected to improve after Christmas, as there are only 4,000 tons on passage.—(Special to M.L.E.).

LIVE STOCK AND MEAT TRADE REVIEW

(WRITTEN SPECIALLY FOR THE "MARK LANE EXPRESS.")

Trade in the West.

The activity which has been such a prominent characteristic of the fat stock markets during the last three weeks has now given place to unusual quietude, purveyors having provided for the special demands now being made on their resources some days ago, with the result that there is very little wanted in the fat stock line anywhere.. In mutton there has been a ready sale for choice wethers and tegs at from 7½d. to 8¼d. per lb. (or up to 66s. apiece); but ewes, except young animals of light weights, have been by no means so good a trade, from 7d. to 7½d. being the best price, coarse heavy sheep selling badly at 6d. to 6½d.; choice suck lambs have been in request for show purposes up to 7d. per lb.; but anything lacking finish or of a poor stamp has been much neglected at 8½d. to 9½d. Pigs just now are beating the record for all the neater weights, either in porkers or baconers, the ruling price for dainty little porkers being 11s. 6d. to 12s. 6d., and 10s. to 11s. for medium weights in hogs. Heavy pigs are not so much wanted. Altogether the trade in Christmas stock has been far more encouraging than for some years past, and sellers have every reason to be satisfied with the returns their stock have brought.

In stores business confined almost entirely to milch beasts and barreners. Deep-milking heifers and cows are both much wanted at from £17 up to £23 apiece; but poorer grades are a much slower sale. In barreners attention is principally confined to animals in the freshest condition, some of the most promising of which are making £26 to £34; though a more average range for the general run of grazing cattle is from £18 to £25 per pair. As a rule, bullocks sell better singly than in pairs. The season so far promises a very satisfactory finale.

Trade in Scotland.

The number of fat cattle on offer this week has been large, and the general quality satisfactory. For everything of a good class a fair trade has been experienced at prices very similar to the preceding week. A very large supply of fat cows met a decidedly worse market at low prices. Fat bulls also more numerous, and they were also cheaper. Fat sheep have been shown in very large numbers, while those of good quality and adapted for shop purposes met nearly last week's prices; heavy-weighted sheep for the London market met a worse trade at an average fall of 1s. 6d. per head. Ewes, not being very plentiful, met a fairly satisfactory market. Fat calves in moderate supply, and those of good quality sold dear. A much larger supply of fat pigs, and they met a much slower trade at prices slightly favouring buyers. A very small supply of store cattle, and a clearance effected at fully recent prices. Rathr more store sheep on offer, generally of a very secondary description. While the best class nearly maintained previous rates, the trade for secondary kinds was worse, and a considerable number of this description left unsold. There was a fair show of milch cows, and they met a very dull market. Quotations:—Top price of best cattle per live cwt., 38s. 4d.; current, 35s. to 37s.; mutton, 7d. to 9d. per lb.—JOHN SWAN AND SONS, LTD.

Trade in Ireland.

Last Thursday in Dublin Market being just the one immediately before Christmas, is generally considered an "off" one, and the number of cattle and sheep offered for sale fully bore this out, as there were only 1,540 (a decrease of 2,485) of the former, and 2,272 (a decrease of 4,795) of the latter. The attendance of cross-Channel buyers was limited, but local men were in good force, and a scarcity of good beef gave a better tone to purchases of better classes, but rough cattle were not wanted; many remained over unsold. Best heifer and ox beef sold at from 50s. to 54s., and extra-finished lots up to 60s. per cwt; good second-quality beef, 45s. to 46s., and inferior from 42s. per cwt. upwards. Prices showed little variation on the previous market, salesmen sticking closely to late rates.

The scarcity of prime home mutton gave the sheep department a healthy tone, but the demand was restricted to good sheep, which cleared well, though not at any higher rates. Coarse sheep were in excess of requirement, and met with no improvement. Prime wether mutton was worth from 7d. to 7½d. per lb.; ewe, 6d. to 6½d.; and coarse sheep from 5d. per lb upwards. Hoggets sold at from 32s to 44s. each, for small to middling, and from 45s. to 55s. for large heavy sorts.

Veal was quiet, and did not generally make late rates. The best veal calves sold at from 7d. to 8d. per lb.; inferior, from 5d. to 5½d. per lb.

A small supply of dairy cows of good quality, which were in request at from £17 up to £20 each. Second-rate and inferior cows in poor request at from £9 upwards. Dublin pig market was a regular holiday one. Buyers of pork pigs had to pay 2s. per cwt. more, and shipping grades were also somewhat firmer, but coarse pigs were tedious of clearing. Best light-weight made from 52s. to 54s. per cwt; coarse heavy, from 37s. 6d. upwards.

LONDON.

Islington, Thursday.—Beast supply consisted entirely of fat but shelling cows and bulls, for which trade was practically at a standstill, too few buyers to enable us to give any quotations; this is chiefly attributable to the near approach of Christmas and to the fact that retail buyers have already bought their Christmas meat. Shortest supply of sheep this year, for which there was absolutely no inquiry. Trade and prices therefore cannot be recorded. Calf trade nominal.

London (Central), Thursday. — Fair supplies, and trade very slow, there being scarcely any demand, the Christmas trade being nearly over. Quotations: English beef, 3s 4d to 3s 6d; Scotch sides, 3s 8d to 3s 10d; shorts, 4s to 4s 4d; Deptford and Liverpool killed, 2s 10d to 3s 4d; refrigerated hindquarters, best, 3s 4d to 3s 8d; ditto, seconds, 2s 4d to 2s 10d; ditto, forequarters, 1s 10d to 2s 2d; inferior beef, 2s to 2s 6d; mutton, Scotch wethers, 4s 2d to 4s 8d; ditto tegs, 4s 4d to 4s 8d; ditto ewes, 3s to 3s 4d; English wethers, 4s to 4s 6d; ditto ewes, 3s to 3s 4d; foreign sheep, 3s 8d to 4s; English lamb, 5s 4d to 5s 8d; veal, 3s 4d to 4s 8d; English pork, 4s to 4s 6d; foreign ditto, 3s 10d to 4s 2d per 8lb.

Boston, Wednesday. — The market was exceedingly small. Milch cows were quoted at £18 to £20; heifers, £14 10s and £15 10s; calves, 55s to 60s.

COUNTRY.

Ashford, Tuesday.—Christmas needs having been supplied, very litle fat stock was shown, and prices receded to those prevailing a fortnight ago; beef made up to 4s 8d. Down mutton up to 6s, Kent mutton up to 5s 10d, veal to 5s 6d, and small pork up to 4s 4d per stone of 8lb. Both corn and cattle markets will be closed next week.

Basingstoke, Wednesday.—At Raynbird and Sons' sale-yard there was a small attendance of buyers of fat stock, but a numerous one for dairy and store cattle. Fat beasts on short supply, and not much inquiry, buyers having filled their requiremens at the Christmas markets last Wednesday. A few good Shorthorn and Polled beasts made close on an average of 18s each. 56 fat sheep and beasts penned, which met a good inquiry; the short numbers on offer were mostly cleared at fully last week's figures. 102 head of dairy and store cattle, prices ranging from £10 to £21. There was a very good trade for the best milch cows, but for inferior descriptions prices ruled lower. Store cattle met with a better demand, and all lots on offer were cleared at satisfactory prices. 123 fat and store pigs on offer, and met a brisk trade; the short entr yeasily sold at late rates. Store pigs were deaver. 24 calves, making from 15s to 90s, were all cleared at satisfactory prices.

Bath, Wednesday.—At the fortnightly market there was a slow demand, and the following were the prices realised:—Cows and calves, £15 15s to £17; barreners, 9s to 12s; fat tegs, 43s to 50s; fat ewes, 40s to 47s; calves, 45s to 97s.

Birmingham, Thursday. — Small supply of beasts, sheep, and pigs. Fair trade for pigs, but slow for beasts and sheep. Quotations: Beef, 5d to 6d per lb.; Herefords, 6¼d per lb.; mutton, 6½d to 8¾d per lb.; bacon pigs, 9s 10d to 10s per score; porkets, 11s 6d per score; cutting pigs, 10s to 10s 6d per score; sows, 8s 3d to 8 4d per score.

Bristol, Thursday.—The Christmas market of Bristol having been held last week, to-day's fixture was quite of a holiday character, both as regards supply of stock and attendance of buyers. Small supply of beef, which proved more than sufficient for the limited demand, and values ruled about 56s to 58s per cwt. best qualities, and 52s for secondary sorts. There were very few sheep or pigs, and trade was dull at about later rates, best qualities of mutton showing a slight decline compared with the Christmas market.

Calne, Friday.—Present prices for prime pigs, in lots of not less than ten, on rail within 100 miles of Calne.

Prime Stores.	Thickness of fat in any part of Back.	Price per Sc. s.	d.
6sc. 10 lb. to 9 sc. 10 lb...	2½ in. and under ...	9	6
Under 10 sc. ...	Not exceeding 2¼ in. ..	9	6
Under 11 sc. 10 lb. ...	2¾ in. ...	9	0
Under 12 sc.	3 in. ...	8	6

C. AND T. HARRIS AND CO., LTD.

Chester, Thursday.—As usual before Christmas, the supplies of stock were smaller than for the previous week, and trade was slow, except for milking stock, which sold at fairly high prices. The show of store cattle was poor, and low rates prevailed. Milch cows, £17 to £21; calvers, £16 to £18; barrens, £10 to £12; heifers, £9 to £14; stirks, £5 to £7.

Chichester, Wednesday.—There was a very fair company of farmers and buyers present, considering the proximity of Christmas, and, with few exceptions, everything, both in the way of sheep and cattle was sold, late prices prevailing. Quotations: Devon steers, 4s 6d to 4s 10d; Southdown sheep, 6s 4d to 6s 8d; West Country sheep, 5s 8d to 6s; fat ewes, 4s 4d to 4s 8d; veal, 4s 8d to 5s 4d; pork, 4s 4d to 4s 8d. Stock at the market: Cattle, 251; sheep, 601; pigs 325; calves, 127; horses, 10. Total stock, 1,314; tolls £9 18s

Dorchester, Wednesday.—Moderately heavy supplies to day, and the tone of the market was brisk, at outside prices. Beef, 11s to 11s 6d per score for the best. Best wethers made 8d to 8½d per lb; ewes, 6½d to 7½d; lambs, 32s to 38s 6d; bacon pigs, 11s 3 to 12s per score; large stores, 25s to 38s; slips, 14 to 23.

Driffield, Wednesday.—The supply consisted principally of store stock. Fat cattle made 7s 3d to 7s 6d per stone; shearlings, 8d to 8½d per lb.; store sheep, 40s to 45s each.

Edinburgh, Wednesday.—There was a small show, but a good trade. Polled bullocks, £11 11s to £15, stirks to £11, halfbred hoggs 35s to 40s; Down hoggs at 37s, grey faced hoggs to 30s, best Shorthorn cows to £24, Ayrshires, to £18, and Irish £15 to £17 10s per head.

Glasgow, Wednesday.—Large supplies. Sheep, 1d to ½d per lb. cheaper; cattle steady. Top Scotch cattle, 64s extreme, and 58s to 60s per cwt. current; top hoggs, 9d.; heavy weights, 8½d to 8¾d; top wethers, 8d to 8¼d; secondary, 7¾d per lb. Dead meat slow, but prices steady; top hogs, 7¼d to 7½d; best Scotch cattle, 6d; best States, 5d to 5¼d per lb.

Leicester, Wednesday.—There was a poor show of meat all round, and very little was wanted. Prices were fairly well maintained. Best beef made 6d to 6½d; larger weights about 6d, and cows 5½d per lb. There was a very slow trade for mutton; best light weights, 9d; heavier animals, 8d to 8½d; and ewes, 6½d to 7d per lb. Veal made about 7d to 7½d. Pork was unchanged.

Lynn, Wednesday.—Holiday market, scarcely anything shown, and very litle trade. Fat sheep, 9s to 10s; fat beasts, about 7s per stone. Store beasts, £6 to £10 each.

Newport, Wednesday.—Quotations:—Caerphillies, 54s to 62s per cwt; fancy dairies, 63s to 65s; Derbys, 69s to 70s; and Cheddars, 60s to 63s. A good supply and a fair demand.

Nottingham, Wednesday.—After the Christmas market a very poor show of cattle and a short supply of sheep. Best beef made up to 8s per stone; secondary, 7s to 7s 6d; and cows and bulls, 6s 6d to 7s; best mutton, to 9½d; large weights, 8s to 8½d; and ewes and tups, 6½d to 7d; calves, 9d per lb.

Preston, Wednesday.—There was a fair attendance, but only a moderate business was transacted. There was a short supply of cattle of fairly good quality, and a large number of sheep. Cows and bulls made 5½d to 5¾d, heifers 6d to 6½d, bullocks 6d, hoggs 8½d to 9½d, lambs, tups, and ewes 6d to 7½d per lb.

Romford, Wednesday.—Quite a holiday market. Very few fat beasts on offer, and hardly any demand. Fair demand for sheep. Beet, 5s 8d to 5s 10½; mutton, 5s 2d to 5s 4d per stone. Calves scarce, fair demand at 5s 2d to 5s 4d per stone. No store beasts offered. Pig trade slow; small porkers, 4s 2d to 4s 4d; large hogs, 3s 10d to 4s per stone.

Stockton, Wednesday. —There were on offer 84 cattle, 90 sheep, and 365 pigs. A small show of the best cattle, which met with a slow trade at 7s 6d to 8s per stone; rougher kinds, 6s 6d to 7s; young sheep, 9d; ewes, 7d; and tups, 6d per lb.

Wakefield, Wednesday.—After last week the market presented a quiet appearance. The supplies were comparatively small and trade was dull. Choice heifers and bullocks made 6¼d to 6½d; beasts of secondary quality, 5½d to 6d; inferior, 5d to 5½d; young sheep, 8½d to 9d; heavy sheep, 7d to 8¼d; ewes and tups, 5½d to 6¾d; calves, 6d to 8d per lb.; milch beasts, £16 to £23; stores, £9 to £13; laying-off cows, £12 to £16; store pigs, 20s to 50s each; porkers, 6s 6d to 7s per stone.

York, Thursday.—The effect of Christmas was felt in the market, when, though the sales were slow, there was a large show of Irish cattle, English being an average show. Three-year-olds made up to £15; two-year-olds, £9 to £11. A smaller show of calving and milch cows, and practically no demand. There was a large show of hogg sheep, but trade was moderate, probably owing to the fact that buyers were standing out for better prices. Best twice-crossed hoggs made up to 44s, and secondary sorts 36s to 40s. A few North Country lambs were on offer, which made 32s to 38s; Mashams, 24s to 32s; shearling sheep, 44s to 50s.

FOREIGN.

Yorkhill, Monday.—Large supplies of American and Canarian cattle were on offer at the usual weekly sales held to-day, 782 head being penned in the lairages. There was agood attendence of buyers, whilstcattle all round were top or average quality. Bullocks of handy sizes and weights met a good demand, while secondary, middling, and inferior grades were slow to change hands. Prime bulls were scarce, but no great demand was experienced, and for those of heavy description trade was very slow. Prices were slightly lower than those ruling last week, but the tone of the whole was firm, and the tendency was upwards. Canadian bullocks of first-class quality sold up to 56s per cwt. dead weight, and lower grades realised from 52s to 54s per cwt. Bulls of prime quality made about 46s per cwt. dead weight, but rough and heavy descriptions were easy at 44s per cwt.

MANURES.

Liverpool, Thursday.—As usual, owing to the approach of the holidays, trade all round is slow. The following are the quotations:—Nitrate of soda, best quality, i.e., guaranteed 96 per cent. pure, in bags, £10 15s to £11 per ton; bone meal, River Plate, prime, in bags, £5 5s to £5 7s 6d per ton; kainit, prime 23 per cent., sulphate of potash, in bags, £2 to £2 2s 6d per ton; palm nut cake, prime, in bags, £5 15s per ton; Linseed cake, American thin oblong, prime but hard, in bags, £8 5s to £8 7s 6d per ton; Linseed cake, English, prime, in bulk, £8 10s to £8 17s 6d per ton; Linseed meal (pure crushed linseed), prime, in bags, £14 to £15 per ton; cottonseed cake, N.A. decorticated, good ordinary, in bags, £7 5s to £7 7s 6d per ton; cottonseed cake, English decorticated, in bags, £7 15s to £7 17s 6d per ton; cottonseed cake, English, undecorticated, prime, in bulk, £4 13s 9d to £5 per ton; fattening cake (Langar's, in bags, £6 17s 6d to £7 per ton; feeding and dairy cake, in bags, £6 10s to £6 12s 6d per ton; crushed cottonseed, 20-25 per cent. oil guaranteed, in bags, £7 to £7 2s 6d per ton; maize germ meal, guaranteed, in bags, £6 per ton; corn oil cake, guaranteed, in bags, £6 2s 6d per ton; rice meal, Rangoon, as imported, in bags, £5 5s to £5 7s 6d per ton; linseed, fine bold feeding, in bags, £2 8s per qr., 416 lb.; cod liver oil, cattle feeding, prime, in casks, 4s 6d per gallon; treacle, feeding prime, in barrels, 4s 6d per cwt. At depots inland:—D.N.S. brand superphosphate of lime, guaranteed, 25 to 27 sol., in bags, £2 to £2 2s per ton; D.N.S. brand superphosphate of lime, guaranteed, 30 to 31 sol., in bags, £2 5s to £2 7s per ton; superphosphate of lime, guaranteed, 35 to 36 sol., in bags, £2 15s to £2 17s per ton; basig slag, prime quality, guaranteed, 30 to 35 per cent. phos., in bags, £1 11s to £1 13s per ton; basic slag, prime quality, guaranteed, 38 to 45 per cent. phos., in bags, £1 19s to £2 per ton; basic slag, finest quality, guaranteed, 42 to 50 per cent. phos., in bags, £2 1s to £2 3s per ton.—H. JONES LANGAR AND

POTATOES.

Borough, Thursday.—Good supplies on offer met with slow inquiry. Quotations: Blacklands, 50s to 55s; best Silts, 55s to 65s, Scotch, 55s to 65s per ton.

Goole, Wednesday.—Poor attendance, the market being of a holiday character, and very little business doing in potatoes. Large quantities are still being shipped to America. Prices in the retail market remain unchanged

Spitalfields, Thursday.—Heavy supplies met with a slow demand. Royal Kidney, 55s to 60s, British Queens, 55s to 60s, Blacklands, 50s to 55s, Up-to-dates, 60s to 65s, Queens, 60s to 65s per ton.

By Lupulin.

LOCAL NOTES.

Concerning Official Estimates.

I am pleased to observe that the Canterbury Farmers' Club, at a recent meeting, discussed the unsatisfactory nature of the returns furnished by the Board of Agriculture of our hop crops. Some years ago the matter was brought under the notice of the Secretary of the Board by a deputation from the N.A.E.H.G., when it was promised that the estimators should be increased in number, and arrangements should be made to secure more reliable information than had hitherto been available. But I regret to state that we are still more or less in the dark, as it is admitted that not only are the figures issued too late to be of any practical service either to growers or brewers, but they are also merely approximate, and have not that necessary element of correctness which is naturally expected in an official declaration.

There is not any obligation for growers to give exact figures; the returns are therefore the results of the opinions of the estimators, and, from what I can ascertain, the figures are arrived at in a perfunctory and somewhat uncertain manner, which deprives them of any real value. When we read the returns of the German hop fields, we know that we can rely upon them, as the Government takes good care that they are carefully ascertained.

Guess work has no place in their system, and it would certainly be advantageous if a similar regulation were adopted in England. Mr. Lister-Kay introduced the question at Canterbury, and, after reading some correspondence he had had with the Board, moved the following resolution:—"That, in the opinion of this Chamber, it is highly desirable that full and accurate returns, not only of the acreage of hops under cultivation (specifying separately the proportion in full bearing), but also the number of bushels harvested, should be available not later than October 15 in each year, for the information of both hop-growers and brewers."

I trust this action will have the desired effect, and that planters will cordially co-operate with the Government officials in completing the results. The Club Committee are following up the resolution, which was carried unanimously.

Hop Growers' Losses.

It is with much regret that I make reference to recent examinations in the Bankruptcy Court which prove how hard are the trials through which some of our planters have passed, culminating in disaster, the record of which is painful. Mr. Lionel Fletcher has been growing hops on an extensive scale for more than 30 years. He commenced business with ample capital, but, after working intelligently and industriously for so long a period, is compelled to close his accounts with liabilities of over £61,000, showing deficiency to the amount of about £25,000. Mr. Fletcher attributes his failure to general agricultural depression, and especially to the low average prices of hops, and the consequent depreciation of his real estate.

Another equally unfortunate case is that of Mr. Jesse Norris, who, after growing hops at Staplehurst for 12 years, and commencing with a fair capital and full experience, has been brought to a winding up of his affairs with liabilities exceeding £8,000, and a deficiency of over £2,500.

In neither of these instances is there any suggestion of want of capacity or attention, nor is the honour of either of the debtors questioned. They have both worked hard, but the pressure of the times has overwhelmed them, and I fear that their unhappy experience is shared by many others, who are still struggling to overcome their difficulties.

Hop growing under present conditions is very trying to all engaged in it, and it will be seen eventually that unless foreign competition is checked the industry in our country must be seriously crippled, if not altogether destroyed.

How America's Wheat and Maize are Exported.

From the preliminary estimates of the Department of Agriculture it is now clear that there will be a surplus available for export of all the leading American cereals sufficiently large to place this country once more at the head of the exporters of foodstuffs, while the present outlook as to the cotton crop indicates a harvest of sufficient proportions to at least insure manufacturers the world over against speculative manipulation. These conditions give a special timeliness and importance to a monograph just issued by the United States Department of Agriculture on "Crop Export Movement," by Frank Andrews. This instructive document includes a sketch of the regions of production of cotton, wheat, and corn; of the trade centres in the interior to which these products are shipped in large quantities; the general movment of these articles from the trade centres to the seaboard, and the export movements from leading ports.

At the outset, several interesting changes in the general direction of the export movement of the three great staples under consideration may be noted. During the twenty-two years ending with 1905 the Atlantic and Gulf ports together handled from 94 to 99 per cent. of the exports of cotton, and from 87 to 91 per cent. of the corn exported; but in the wheat and flour trade a considerable amount was exported from the Pacific coast. In 1905 only 6 per cent. of the wheat exported went from Atlantic and Gulf seaports, while the Pacific coast cities handled 92 per cent. Of the wheat flour exported in 1905 the Atlantic and Gulf ports shipped 60 per cent., the Pacific ports 35 per cent., and 5 per cent. was exported across the borders into Canada and Mexico. The following table shows the percentages of cotton, wheat, wheat flour and corn exported from Atlantic and Gulf ports from 1884 to 1905:—

AMERICA'S WHEAT CROP.

Year ending, June, 30.	Wheat.		Wheat Flour.		Corn.	
	Atl.	Gulf.	Atl.	Gulf.	Atl.	Gulf.
1884-1888	59	2	81	1	74	15
1889-1893	53	9	81	1	74	13
1894-1898	53	10	79	3	71	19
1899-1903	47	22	74	6	75	16
1904	20	55	63	12	74	16
1905*	5	1	53	7	59	29

* Preliminary returns.

Wheat.

Domestic wheat exported from the Atlantic and Gulf ports comes chiefly, if not entirely, from the States east of the Rocky Mountains. The States producing the most wheat in 1904 were Minnesota, Kansas, North Dakota, South Dakota, and Nebraska. The next States in order of production were Missouri, Pennsylvania, Illinois, and Ohio. Of these States the production of the last three hardly sufficed to meet the local consumption, estimating the capital consumptio nat 6.23 bushels. In Missouri, however, there was an duction far exceeded the estimated requirements while in the first five States in the list the production far xceeded the estimated requirements for home use. It is, then, in the country lying west of the Mississippi River, north of Oklahoma, and east of the Rocky Mountains, that most of the surplus wheat of the United States is produced. From the fields of this region, as well as from others where the production is relatively smaller, wheat is gathered in large quantities into certain trade entres. Owing to the great quantity of flour manufactured in that city the receipts of wheat at Minneapolis are larger than those of any other city in the United States, amounting in 1904 to 87,000,000 bushels, or 19,000,000 bushels more than were produced that year in Minnesota. At Kansas City, the second wheat centre of the United States, the receipts in 1904 were 39,000,000 bushels. At four other cities, Duluth, Buffalo, Chicago, and St. Louis, the receipts were from 23,000,000 bushels to 27,000,000 bushels each, while in recent years the tendency has been toward increasing the receipts at south-western centres like Kansas City and St. Louis, while receipts at Minneapolis have remained stationary and Chicago have declined. Receipts of wheat flour are much heavier at Minneapolis and Chicago than at many other points, Buffalo ranking third in this respect, followed by Duluth, Milwaukee, St. Louis, Kansas City, and Cincinnati, in the order named.

There are two general directions which wheat from the regions of surplus production may take to the seaboard, and these two directions are marked by two lines of waterways—the Great Lakes and the Mississippi River. Wheat from Duluth may be shipped down the lakes to Buffalo or to Montreal. At Buffalo it may be shipped to New York by rail or transferred to a canal boat and towed down the Erie Canal to the Hudson River, and down the Hudson to New York Harbour. Wheat may also be shipped by this route from Chicago and grain centres on the lower Great Lakes.

Running in the same general direction as this water route are many railroads, all of which carry more or less grain. One route from Duluth follows the Duluth, South Shore, and Atlantic Railway to Sault Ste. Marie, and there takes the Canadian Pacific Railway to Montreal, then crosses the border into the United States again, and finds its way to the coast at Portland, Boston, or New York.

The distance from the points of concentration to the seaoard vary widely, that from Duluth to Portland by way of Canada being 1,330 miles, to Boston 1,400, and to Baltimore via Chicago 1,280 miles. From Chicago the nearest port of shipment is Baltimore, 802 miles distant, while New Orleans is 914 miles away. For St. Louis the nearest port is Mobile on the Gulf, distant 644 miles, while the nearest Atlantic port is Baltimore, 930 miles distant. For Kansas City the nearest seaport is Port Arthur, Texas, which is due South, and the nearest large port is Galveston, distant 873 miles.

Not only does distance affect the coast to the railroads of carrying grain, but the grades of the railroads also enter into the cost of operation. The roads that follow the shores of the Great Lakes have easier grades—that is, their tracks are much more level—than those that cross the Allegheny Mountains, while the railroads that extend from the wheat country west of the Mississippi River down to the Gulf ports are also generally more level than those which cross the Allegheny Mountains.

Another item affecting the movement of grain is the competition, either actual or potential, of water routes. The water route of the Great Lakes is used to a large extent in transferring grain from the wheat-fields down to the Atlantic coast. The Mississippi River is also a route used for carrying grain from the wheat country down to the Gulf of Mexico, but during 1904 very little grain was actually shipped this way—practically none from St. Louis to New Orleans.

While distance does not determine the direction of the shipment of grain from interior cities to the different seaports, it is interesting to know how far a given centre of the wheat trade is from the seaboard outlet of that trade; for, whether the rates charged depend upon the distance or not, it is evident that the actual cost to the carrier is affected, at least to some exent, by the distance travelled. The rates charged by the carriers to the shippers are important, if not all important, factors in determining the direction of the trade.

There have been several noteworthy changes in the export movement of American wheat in recent years. The average annual shipment of wheat from the Atlantic ports from 1884 to 1888 was 45,000,000 bushels, and during 1889-1893, 60,000,000 bushels. For the Gulf ports the average annual exports for 1884-1888 were 2,000,000 bushels, and for 1889-1893 29,000,000 bushels. In 1904 the Atlantic ports exported 9,000,000 bushels, while the Gulf ports exported 24,000,000 bushels, 17,000,000 of which were shipped from Galveston.

The exports of wheat from New York during the four periods mentioned showed but little variation, the average being about 27,000,000 bushels per year for the twenty years. In 1904 the wheat exports from New York declined to 3,000,0000 bushels. Baltimore also showed but a small change during the twenty years ending with 1903. The average for the first five-year period was 11,000,000 bushels, and for the last five the same, and for the other two five-year periods 10,000,000 bushels. In 1904 the exports from Baltimore were about 3,000,000 bushels.

Of the Gulf ports New Orleans was the principal wheat exporter during 1884-1905, except in 1899, 1900, and 1904, when Galveston took the lead. The percentage for New Orloans for the five years 1899-1903 was 11.26, and that of Galveston almost as much—10.59.

During the years from 1884 to 1899 the exports from the Pacific coast were about one-third of the total exports from the United States; in 1899-1903 they were somewhat less than one-fourth, and in 1904 less than one-sixth of the total. During 1905, however, more than nine-tenths of the wheat exported from the United States was shipped from the Pacific coast.

Corn.

The greater part of the corn crop of the United States is produced in the Mississippi Valley, south of the lower limits of the Great Lakes and the southern boundaries of Minnesota and South Dakota and north of the Ohio River and the northern boundaries of Arkansas and Oklahoma. The production of this region, together with the crop of Texas, amounted in 1904 to 1,574,000,000 bushels. In 1902, 1903, and 1904 Illinois was the leading State in the production of corn, and Iowa was second. The crop of Iowa in 1904 was about twice the crop of Missouri, and Nebraska produced nearly twice as much corn as Kansas. In view of the great production of wheat in Kansas, the corn crops of that State during the three years 1902-1904 were large. The region occupied by the States of Illinois, Iowa, Missouri, and

Nebraska may be regarded as the centre of the corn belt—that is, of the principal corn producing region of the United States. These four States in 1904 produced more than 1,000,000,000 bushels of corn.

Corn appears in the export trade of the United States in the form of grain, and also as an element of value in live stock and animal products. The practice of farmers in sending their corn to market "on the hoof" explains the great difference between the quantity of corn harvested and the quantity received in the form of grain at the various trade centres.

The principal primary market for corn is Chicago. During the six years ending with 1904 an average of 101,000,000 bushels of corn per annum was received at Chicago, or more than the combined annual receipts at Buffalo, St. Louis, Peoria, Kansas City, and Cincinnati. The total receipts of all of these cities, however, only equalled about 8 per cent. of the crop. Corn moves from the trade centres of the interior to the seaboard by practically the same routes as wheat, but fluctuations in the railroad charges late in 1904 and early in 1905 resulted in diverting much of the traffic to Gulf ports. During seventeen of the last twenty-two years New York has been the leading corn port of the United States, but during the last decade has been outranked by Baltimore five times. The third city in importance in this trade is Philadelphia, although that port has been occasionally surpassed by New Orleans. Formerly Newport News and Norfolk were important shipping points, but of late their share of the trade has delined.

The export movement in corn has been subject to very wide fluctuations. The exports of corn from Baltimore during the fiscal year 1901 were 41,000,000 bushels; in 1902, 4,000,000 bushels, and in 1903, 17,000,000 bushels. Similar fluctuations took place in the trade of other ports. The crops of these three years help to account for these changes in the exports. The crop harvested in 1900 and exported during the fiscal year 1901 amounted to 2,105,000,000 bushels; the following year the crop was only 1,523,000,000 bushels, and the exports fell off. The next crop was larger than that of either of the two preceding years—2,524,000,000 bushels—and the quantity exported increased over the previous year. A similar series of changes occurred during the fiscal year 1890-1892.

Exeter Show.

The twenty-second annual show of the Exeter Fat Stock and Poultry Society was held at Exeter on the 15th inst., and it was without doubt one of the best of the series. The entry was a record one, the total being 715, as compared with 598 last year, and the number is considerably in excess of most of the shows in the society's history. The record was established principally by the very large increase in the entries in the classes for live poultry, there being nearly one hundred more than those of last year. So popular has this section become that the society were justified in adding five more classes. Last year was a record one for bullocks, but this year's entry only fell short of the total by three. The society, after a lapse of some years, again introduced a couple of classes for South Devons, and they were well filled. A local class for sheep was also added to the catalogue for the first time, and attracted eight pens from the tenant farmers of the district. There was a big entry in the open barley class, and some very fine samples were shown.

In the sheep classes nothing could compete againstagainst the pen of long-woolled wether lambs sent in by Mr. A. C. Hall, of Marldon, Paignton. The pen won the breed cup at Smithfield, and has also been very successful at other shows. At Plymouth they did not get the champion prize, it is stated, because they were penned badly, a fault which was remedied at Exeter, with the result that they secured the silver cup awarded as the champion prize for the best pen of sheep in the exhibition, and another similar special, the reserve card in each instance being given to a pen of cross-bred wethers belonging to Mr. G. Shore, of Broadclist.

The champion beast was adjudged to be an Aberdeen Angus, belonging to Mr. E. P. Alexander, of Holt, Wilts, which also secured the champion prize for the best ox or steer. It was a wonderfully fed and symmetrical animal, carrying its meat in its best parts, and it had the best of top and under lines. In the championship for its sex it found a competitor in a North Devon steer, belonging to Mr. W. D. Sanders, of Bridgwater, which was deep in front and well let down through the ribs, but not quite so symmetrical in the top line. For the championship of the show Mr. Alexander's beast was pressed by an heifer, sent in by Mr. H. Helmer, of Kingsbridge, which had secured the championship of its sex. The latter award gave the judges much trouble. Ultimately they carried out the Plymouth award. It was a grandly made South Ham cow, marvellously well shown, with unusual thickness of sirloin and ribs; a trifle wanting in thickness through the heart, but withal a well-made animal of its breed.

In the class championship it was run pretty close by another of Mr. Alexander's animals, a shorthorn and polled Angus, built on the very best of lines and well fed, and it was a matter of opinion whether the places might not have been reversed. The North Devons came out strongly, and were considerably better numerically than those shown at Plymouth. The South Hams were not quite so numerous, and there was nothing amongst them to equal the superb animals of Mr. Roberts, which won premier honours at the West of England Show.

NOTES AND NEWS OF AGRICULTURAL SOCIETIES.

Canterbury Farmers' Club.

A discussion on the question of local taxation and the burdens on the land took place at the meeting of this club on the 16th inst., and a resolution was passed as follows:—"That the Canterbury Farmers' Club and Chamber of Agriculture views with alarm the long-continued depression in agriculture, and the progressive fall in land values, these being largely due to the grave increase in the burden of local taxation; that the Club, being of the unanimous opinion that many of the charges now locally borne, notably the cost of education, of main roads, and of lunatics, should more fitly be imposed on the community at large, requests its representatives at the Central Chamber of Agriculture to lose no opportunity of pressing this opinion on that body with a view to its ultimate embodiment in Parliamentary legislation.

At the same meeting Mr. Lister Kay read correspondence which he had had with the Board of Agriculture with reference to the great advantage which hop growers would derive if the hop estimate could be made more correctly, and moved "That, in the opinion of this Chamber, it is highly desirable that full and accurate returns, not only of the acreage of hops under cultivation (specifying separately the proportion in full bearing), but also the number of bushels harvested, should be available not later than October 15th in each year, for the information of both hop growers and brewers.—This resolution was also carried.

Ludlow.

The Earl of Plymouth was elected president for the year at the annual meeting of the Ludlow Agricultural Society, and a vote of thanks was passed to the retiring president (Mr. T. H. Atherden) for the able manner in which he had conducted the society during the past twelve months, whilst Mr. E. H. Wood was re-elected secretary. Mr. H. Lloyd referred to a speech of Sir William Curtis on the last show day as to the alteration of the date of the show, and moved that a committee be appointed to consider the question, and this was agreed to. Mr. Tyrrell moved that the Committee should not expend more than £250, instead of £280, and this was also agreed to.

Milborne St. Andrew Farmers' Club.

At the jubilee dinner of the Milborne St. Andrew Farmers' Club, in Dorchester, on the 16th inst., the keynote of several of the speeches was the need for more legislation on behalf of the agricultural interest. The speakers pointed out that this could only be obtained by pressure being brought to bear upon Parliament from farmers themselves, and this in turn would be rendered futile unless the farmers combined their forces The Dorset Joint Agricultural Committee was considered a step in the right direction, not only to bring farmers into association, but in order to get those associations into touch one with another, that so by combination of forces greater influence may be exerted.

Bakewell Farmers' Club.

The report presented at the annual meeting of this club, held at the Town Hall, Bakewell, on Monday, showed that the receipts for the year amounted to £763 3s. 6d., and the expenditure to £659 19s. 5d., leaving a balance in hand of £103 4s. Of this balance the committee had placed £75 towards a reserve fund, and carried forward £28 4s. to next year's account. The accounts in connection with the Shire horse fund showed a loss of £5 4s. 10d. A new rule that the society would not be responsible for any damage to, or expense in connection with, any exhibit at the annual show was adopted. Mr. T. C. Waterhouse, of Lovebirdale Hall, was elected president, and Mr. Wiliam Clarke, of Castle Street, vice-president for the year. It was decided that the subscription of 10s. per year by members should be continued. Votes of thanks were passed to the Duke of Rutland (the retiring president) and others.

Warrington.

Sir Gilbert Greenall presided over the annual meeting of the Warrington and District Agricultural Society, held on Tuesday. The report showed that increased interest was being taken in the show, but notwithstanding the large number of entries and high character of the last show there was a loss on the year's working. The deficit, however, had been made up by a special donation by the President. A number of new members had joined the Society, but still they required more to make it self-supporting. The question of the extension of the Society's district, the report continued, would have to be seriously considered. The twelve miles radius round Warrington did not extend sufficiently into the cheese, butter, and hunter districts of Cheshire, and it was therefore proposed to increase the size to 16 miles in Cheshire, except that part lying east of the railway from Broadheath to Manchester and north of the railway from Broadheath to Stockport.

The report was adopted. Sir Gilbert Greenall was re-elected president, and it was pointed out that if this were decided it would enable certain champion breeders to come in and sweep the decks. It was also contended that the part of Cheshire it was intended to include was already covered by the Altrincham, Middlewich, Mid-Cheshire, Wirral and Birkenhead, and Shropshire shows. Eventually the meeting decided against extending the boundary by a large majority.

Worcestershire Chamber.

various subjects were discussed and resolutions passed at the last Council meeting of the Worcestershire Chamber of Agriculture. First, a unanimous resolution was passed urging the necessity for an amendment in the law relating to trespass, making it a punishable offence for unauthorised persons to go upon land or remove natural produce. Then attention was called to the necessity for enforcing the Sale of Food and Drugs Act and other Acts to prevent adulteration, and this was endorsed by the Chamber, the chairman (Mr. T. W. Parkes) expressing regret that no provision was made to secure the brewing of beer from malt and hops. Barley growers would like to see stringent measures taken in this direction. Mr. Parkes subsequently called attention to the heavy wear on the roads caused by the use of traction engines, and proposed that the County Council be urged to increase the fees charged for heavy locomotives to an amount more than nearly equal to the benefits owners enjoyed, and that the use of locomotives be prohibited upon roads under repair or during the break up of a frost. After discussion the proposal was carried, as was one urging the President of the Board of Agriculture to re-introduce the Butter Bill and push it forward.

Worcestershire Farmers and the General Election.

The members of the Worcestershire Farmers' Association met at Worcester on the 16th inst., under the presidency of Mr. C. E. Boddington, to consider what steps should be taken in view of the approaching election. It was decided, without entering upon politics, to submit to the various candidates in the county the following questions:—

(1) Are you prepared to vote for a measure placing the cost of education on the National Exchequer? (2) Will you support an Agricultural Holdings Bill for the purpose of giving a tenant security in his holding and compensation for vexatious disturbance? (3) In view of the national traffic on the main roads of the country caused by motors, will you support a Bill to place the cost on the National Exchequer? (4) Are you prepared to support a measure providing a system of rating in rural and urban districts whereby the burden may be more equitably distributed? (5) Will you support a Pure Butter Bill, a measure to ensure the better working of the Feeding and Fertilisers Act, and a Pure Beer Bill?

It was decided to make endeavours to establish a Midland federation of agricultural associations, and the Farmers' Associations of Staffordshire and Warwickshire are to be approached with this end in view.

Those who are interested in the many breeds of live stock in the United Kingdom, whether from the standpoint of lovers of our domesticated animals, or from a business point of view, will find a wealth of information in the "Live Stock Journal Almanac" for 1906. As usual, it contains, in addition to the special breeders' tables, monthly diary and calendar, lists of societies connected with agriculture and stock breeding, statistics, etc., about fifty articles from prominent authorities on the subject dealt with. There are reviews of all the breeds during the year, sales, shows and exports being treated at length, while numerous illustrations of prize-winning animals are given.

Live Stock Record.

WINTERING DRY DAIRY COWS.

In times anterior to steam-thrashing machines, when the thump of the flail was heard at every farm homestead throughout the kingdom, at least three-fourths of the dairy cows of the country were in strawyards at the present period of the year. Before railways enabled rivers of milk to be poured into London from the country the customary calving time for cows was from about the middle of January to the end of April, and they were deemed out of season coming into profit at other periods. At Martinmas a considerable proportion was always dry, and unless rough grass remained in quantity to be "beaten out," as it was termed, the strawyard was their abode until calving time. Nor did they get much to subsist on except pickings from the proffered big supplies of straw fodder and cavings from the thrashing-floor, in the southern half of England. But the Scottish system was a little more liberal. When roots were at all abundant, a few daily were given to all cattle feeding on straw.

No stock have been subjected to more revolutionary changes in the past century than dairy cows. Instead of having to calve at Candlemas, or within two months of that ancient festival, they do so by training all the year round. And their owners, having to occupy contracts, find it necessary that they should do so.

Strawyards have been very much revolutionised likewise. At about the middle of last century it became a measure of reform to spout the roofs of the farm-buildings that previously discharged so much water into them that they were often "puxies" and sent little rivulets of liquid manure down the roads. Nor did reform stop here. The best managers found it to be unwise to allow cows to lose condition when out of profit; they therefore commenced giving them while on straw diet 2 lb. per head of linseed cake per day. They were confirmed in the utility of doing this by assurances from chemists that if they did not find a return for the cake in the cows they would be sure to get it in the higher quality of the manure. But as the nineteenth century waxed old, the conversion of arable land to pasture grew so general until straw itself became an article of scarcity. Even before the Royal Prize Farm system was abolished some of the best farmers of Cumberland could not afford straw bedding for dairy cows. The report states that some very valuable ones were found lying on the bare stones of the yards.

The twentieth century system of feeding dairy cows out of profit most approved is that of fermented straw-chaff, with a little root-pulp intermixed therewith, or, in the event of roots being too scarce for any to be spared, an addition of a little of some auxiliary feeding stuff instead. By damping the chaff, and afterwards placing it in heaps to ferment, it becomes not only more digestible, but a nice grateful aroma is emitted attractive to bovine sense, and the chaff is rendered more acceptable also to the palate. The transference of arable to pasture has extended to such a limit, that some owners of herds have absolutely insufficient straw to resort even to this system, and are compelled to give inferior hay to their out-of-profit cows instead. Even when this is the case, it would be absolutely economical to deal with the inferior hay as recommended for the straw—namely, to chaff and ferment it. Both by scent and taste it thereby becomes attractive, even if musty before.

STOCK AND SHOW NOTES.

By Herdsman.

The Lincolnshire Agricultural Society, in reply to an invitation to hold the show of 1907 at Horncastle, have replied that they cannot at present entertain the invitation.

The Shorthorn Society of Great Britain and Ireland have just issued Volume LI. (new series) of Coates's Herd Book. This gets more bulky every year, and the latest volume extends to considerably over 1,100 pages. The details include bulls, Nos. 87759 to 90585, and cows up to December 31, 1904.

At a recent meeting of the Monmouthshire Chamber of Agriculture, the following resolution was unanimously passed:—"That this meeting of the Monmouthshire Chamber of Agriculture urges upon its members the desirability of using every endeavour to make the visit of the Bath and West and Southern Counties Society to Newport in 1907 an entire success in every way."

I hear that the very large herd, flock, and stud owned by the late Mr. Philo L. Mills, of Ruddington Hall, Notts, will be brought under the hammer in the course of the coming year, and the sale will naturally be one of the features of the year in the live-stock world. The deceased gentleman, it will be remembered, was an enthusiastic patron of Scotch Shorthorns, or animals of the red, white-and-roan, which were largely of Cruickshank descent. In draught horses, however, he kept to the massive Shires of his adopted country. Mr. Mills was so long in England that many forgot he was an American by birth and early training.

The Driffield and East Riding Agricultural Society's next show (the fiftieth) will be held on Friday, June 15, 1906. The entries for stock will close on May 31; for poultry, etc., on June 7, 1906. Mr. Thos. Holtby, 23, Exchange Street, Driffield, is the secretary.

Although the Warwickshire Agricultural Society has been invited to hold its next year's show at Nuneaton, it cannot be said that the people of that town are giving the society a cordial welcome, for at Wednesday's meeting of the Nuneaton and Chilvers Coton District Council, the clerk reported that since the town's meeting decided to invite the County Agricultural Show to Nuneaton, the president of the Ansley Agricultural Society (Mr. Henry Stubbs) had informed him that some time ago it was resolved to hold the 1906 exhibition of that association on a date a few days before the one on which the Warwickshire Show would be held at Nuneaton, and the members of the local society could not, therefore, support the county fixture. Mr. T. Horton said they must not forget the Ansley Show was becoming an annual institution. The county exhibition was only held at Nuneaton, perhaps, once in twenty years, and the Council ought to do everything to encourage the local society. After some further discussion, the Council decided they could not do anything, as the matter was now out of their hands.

A high-class boar from Mr. J. Warne's famous Treveglos herd of pedigree Large Black pigs was shipped on Friday last from Hull to Stettin to the order of Messrs. Schutt and Ahrens. Also two Large Black boars from the same herd (to the order of Mr. Miller) have been shipped from Barry Docks, Cardiff, to Chili. Treveglos Darky Jim 1199 has, I am told, been sold at a big price to the Earl of Stradbroke, Halesworth, Suffolk. It will be remembered that Treveglos Darky Jim won the first prize at the Bath and West at Nottingham, and first prize at the Royal Counties, Bournemouth, where he has also won other prizes, so that the noble earl is to be congratulated on his purchase.

The experience of the Royal Agricultural Society in making losses at most of their annual shows is not exceptional, as the National Agricultural Society of Germany suffers from similar financial deficits at their annual exhibitions. A comparison of the results is interesting:—

Royal Agricultural Society.			German National Society.		
Year.	Place.	£	Year.	Place.	£
1893.	Chester ...profit	951	1893.	Munchen ...loss	949
1894.	Cambridge ,,	1,118	1894.	Berlin ... ,,	2,665
1895.	Darlington ,,	665	1895.	Cologne ... ,,	3,493
1896.	Leicester... ,,	3,673	1896.	Stuttgart ... ,,	4,645
1897.	Manchester ,,	4,155	1897.	Hamburg profit	1,709
1898.	Birmingham loss	1,799	1898.	Dresden ... loss	5,825
1899.	Maidstone... ,,	6,569	1899.	Frankfort... ,,	2,8 6
1900.	York ... ,,	2,819	1900.	Posen ... ,,	4,282
1901.	Cardiff ...profit	2,038	1901.	Halle ... ,,	939
1902.	Carlisle ... loss	2,956	1902.	Mannheim... ,,	4,569

It will be seen from this statement, taken from an article in the journal of the German Society, that the losses on the German shows are regularly incurred, but the Society regards their exhibitions of great educational benefit to agriculturists, and have arranged their finances so that the losses, although disagreeable, are not of a serious import. The Society has a membership of about 14,000 members, with annual subscriptions of £1 each, and we believe there are no life members, so that they can calculate on the full subscriptions every year.

Sheep-breeding in Denmark has shared in the relapse which has fallen generally throughout Europe on this branch of agricultural industry, as may be seen from the following figures. There were in—

	Cattle.	Pigs.	Sheep
1866	1,194 000	382,000	1,875 000
1876	1,318,050	504,000	1,719,000
1888	1,460,000	771,000	1,229,000
1898	1,745,000	1,168,000	1,074,000
1903	1,840,000	1,457,000	877,000

So that within the last forty years the number of cattle has increased by 60 per cent., the pigs are three times as many, while the number of sheep is less than one-half of what is was.

The reason for this decrease arises chiefly from the great fall in the price of wool, in consequence of competition with Australia and other over-sea countries, but as wool has advanced in value during the last few years, it is thought that sheep-breeding may emerge from the depression which has so long encircled it, and become once more a fairly profitable industry.

Earl Carrington, G.C.M.G., President of the Board of Agriculture and Fisheries, has appointed Mr. F. L. C. Floud to be his private secretary, and Mr. R. Winfrey to be his assistant private

Poultry-breeders will hear with regret of the sad death of Mr. Lewis Wright, whose works on poultry matters have made him famous. Mr. Wright lived at the Tunnel House, Saltford, near Bristol, and on Saturday was crossing the line as an incoming train was approaching, under the impression that it was the usual train which stopped at Saltford, and by which he usually travelled to Bristol. It proved, however, to be an excursion train to Cardiff for the Wales v. New Zealand match, and before he could be warned of his mistake he was knocked down and killed. Mr. Wright's most popular work was "The Book of the Poultry," which is generally recognised as a classic on the subject. Mr. Wright, who, by the way, was a successful breeder and exhibitor, also wrote "The Practical Poultry Keeper" and "The Brahma Fowl," and he edited "The Book of Pigeons" and lately "The Poultry Club's Standard," just issued by that body.

Notes and Jottings.

By the time these notes are in print and circulated the last week of the year 1905 will be with us, and the making up of accounts of the year's doings will be a very important part of the farmer's work as the year finally closes—that is, where such accounts are kept. The first note, therefore, in this week's column will be rather one of advice to those who keep records, and everyone ought to do so, even if they are only kept in the most brief and simple manner. The point to be advised most strongly is to make a brief memoranda of any event, transactions, or trials in the cattle-breeding or feeding section that may have turned out very disappointing and have caused considerable loss, as well as those that have given the opposite results, greates success and profit than had been anticipated. There will on all huge farms have been numbers of such cases.

On the face of this note it would appear to be almost or quite superfluous, as most people will readily tell you, "no need to make such memorandums as those I recollect too well the things that disappointed one and lost money or the reverse, as the case may be"; but this is not always so. Many a time and oft has a man been known to treat a certain class of cattle in a certain way that has caused considerable trouble and loss, and yet in a few months even, or at any rate in another year's time, the very same cause will be repeated in an unguarded moment. The fact of making a note of a thing impresses it more effectively upon the mind, and also in years to come reference to such notes may be of the greatest benefit, if not to those who made them, at least to those who follow them, perhaps.

Included in such memoranda should be such items as the changing of food to milking cows, fattening stock or young calves, and the effects of such change. Also any other circumstances that may have happened in the way of successful treatment of various cases of sickness, abortion, and the like, as well as the effect of different kinds of cake or meal upon certain animals, likewise the effects of change of pasture, which are often very serious, and if not noted down will probably be forgotten very quick'y. We have known a beautiful lot of yearlings completely ruined by starting them off sinking just before going on to a rich pasture, such treatment having been brought about by scarcity of hay or roots in April before the grass is quite ready.

The year, when its results come to be balanced, it is to be feared, will not have a very rosy look-out, so far as the generality of cattle are concerned. High-class pedigree stock, especially of the Shorthorn and Hereford breeds, will have left agreeable recollections in most herds, but where reliance has had to be placed upon milk, butter, cheese, or beef production at market prices, but little new money can have been made. The best class of cheese has been making remunerative figures, and so for Christmas the best furnished cattle have also in most places realised fully up to expectations, and, beyond these two sections, the cost of production owing to scarcity of keep a great deal of the summer, and the high price at which feed is, and good milkers have been bought at home, swallowed up most of the profit.

The "Breeders' Gazette" (Chicago), in referring to the state of the cattle trade, makes some remarks that are well worthy of notice as affecting the producer and the butcher. The remarks are to the effect that whilst the butchers are looking out for and paying higher prices for long-fed steers, as the best finished ones are termed, the producers are complaining that at the higher price paid for such their feeding becomes a loss, experts remarking that these have consumed as much corn as they are worth, whilst though the short fed ones leave but a little profit there is no loss to be deducted, and so the outcome is that they are the more profitable. When extra ripeness has to be produced at excessive cost it is doubtful if it ever pays.

There are circumstances, however, if carefully managed in average good seasons that will see the feeder of the best animals quite safe from loss. If the stores are turned out to the pasture in fair condition, and are of a suitable kind for such pastures (it is no use expecting Shorthorns to get ripe upon pastures that are only stout enough to fatten Kerries), they will usually get thoroughly ripe without more corn than is necessary to prevent shrinkage after the grass has lost its nutritive properties in the late autumn. The experience in such cases is nine times out of ten due to the animals either being turned out to grass in too lean condition or otherwise to their being of a class unsuitable (too big) for the pastures they are fed upon.

In Chicago Market the numbers of cattle penned have suffered quite an amazing reduction since October and the first week or so of November. Upon several occasions at that period as many as 97,000 head were marketed in the six days of the week, while more recnly the market books show a reduction of 67,064 head in six days, thus giving a reduction of 30,000 head a week. Such enormous reductions must affect prices and demand very considerably. With the shorter supplies prices have risen considerably, notwithstanding the rise, however, prices of the best cattle in that market are at a substantially lower level than they were a year ago. Prime Illinois-fed Herefords appear to have been given the highest quotation, and steers of 15 cwt. appeared to be quoted at near the top.

A very successful sale of Ayrshire cattle took place near Ottawa, Ontario, where forty-four animals averaged the sensible figure of 273 dollars per head. Seventeen cows sold for an average of nearly 400 dollars, and one four-year-old bull, Lessnessock King of Beauty, brought 700 dollars, the highest-priced cow was a six-year-old, Garelough Queen, realising 675 dollars. It is not often that such spirited competition and high-level prices have to be recorded of this very useful milking breed. On this side the Atlantic very few sales of Ayrshires are noted for some reason or other. The prices quoted compare more than favourably with most other milking breeds either on this or the other side the sea.

An important National Dairy Show will take place in Chicago in February next. Classes are provided for three-year-old and two-year-old bulls, with a championship for cows, two-year-old heifers and yearling heifers, also a herd championship for bull, two cows, and a two-year-old and yearling heifer. Classes will be open for Ayrshires, Jerseys, Guernseys, and Holstein Trusians. Dairying in various ways is attracting much more attention in all parts of America than was the case a few years ago. Doubtless, as population increases, the demand for milk will likewise increase in greater proportion perhaps than the demand for meat. In England at least, as time goes on, there appears to be a much stronger inquiry for milk than there used to be.

Visitors to the recent Smithfield Show must have been struck with the great improvement that has taken place in the Sussex breed of cattle, and the high state of perfection to which it has attained. The shape and quality of these cattle, as far as filling the eye is concerned, is quite wonderful, and it is to be hoped that they will give an equally good account of themselves to their butcher purchasers. The breed thrives and prospers exceedingly in the South-Eastern Counties, and though I have not yet gone through the averages of the weights of the various breeds at that show, I fancy one of the Sussex steers is not far from being at the head of the show, as regards daily gain from birth. It is very satisfactory to find that the society supporting the breed are offering prizes at several of the leading shows.

An agitation seems likely to be set up against the present regulations prohibiting the importation of live stock for breeding purposes into the United Kingdom, and suggestions that quarantine sheds might be arranged, so that any breeder desirous of importing blood from America, Europe, or elsewhere, might be able to do so by having the animals kept in quarantine on this side the water for a sufficient length of time to insure their safety on being introduced into our own herds. There is no doubt some breeders would be glad to avail themselves of new blood, and perhaps not infrequently of the repurchase of animals that have had their constitutions strengthened by their sojourn over the seas for a year or two. At one time of day a great business was done in the importation of milking cows. The expenses of quarantine, however, would effectually strangle that trade.

Whatever may be done in the way of allowing animals for breeding purposes to be admitted upon quarantine regulations, it is strongly to be hoped that our new Government will be as firm as the late members were in their adherence to the exclusion of foreign or Canadian stores. There is absolutely no necessity to open our gates for such a purpose, and the result of doing so would be a deterioration in the quality of home produced beef, as well as very shortly also in the deterioration of our store cattle, for heifers and young cows for dairy purposes are now, and have been for years, a better trade than feeders, and the offspring of such are frequently reared for feeding purposes, therefore the admitting of grade Canadian females would be quite a dangerous experiment.

The Breeding and Feeding of Cattle.

An interesting paper on the above subject was read at the annual meeting of the Aberdeen Angus Club by Mr. W. Reid, a London meat salesman, who, in the course of his address, said:—In giving evidence before the Royal Commission on the Supply of Food in Time of War, several of the witnesses said that Great Britain could produce 50 per cent. more than it does. Now, although I do not agree with many of the statements made before the Commission, I fully agree with that one, and I maintain that the only reason for that increase not being attained is the lack of capital and practical knowledge. Please note that these two must be combined in order to secure success. In the olden days, when land and labour were cheap, and beef was not considered good until it was four years old, farming was of a much more simple nature; but times and things have changed, and in order to secure the early maturity that is now demanded, the breeding and feeding of cattle has become a science. Aberdeen-Angus cattle are undoubtedly the finest beef producers in the world, but they do not appear to do so well as the Shorthorn or Hereford in the tropical climates. And this may be one of the reasons why they do not make the highest prices; but there are other reasons.

The great demand in the United States for the best cattle thirty years ago, and the importation of cheap Canadian stores, greatly depleted the stock of Aberdeen-Angus cattle. In getting that stock back to, or beyond, the old standard, care enough has not been taken in the selection of the sires. For years nearly every male calf was allowed to become a bull, with the result that a large portion of the stock is inferior in quality and size. I would therefore advise a much more rigid selection of the sires, and a severe weeding out of the weak and inferior cows and heifers.

Next in order comes

The Treatment of the Stock,

and this, as you will readily admit, is very important. Feeding must commence at the earliest stages and be continuous If the cows and young stock must be grazed on the poorest land, they ought to have artificial food to keep them going, the use of which would, besides, materially improve the lands. The old idea that young stock were doing all right so long as they grew bone and hair has been exploded, and, although it costs labour and money to feed from the very first, I believe nothing pays so well. I am strongly of opinion that a genial heat is an essential factor in the successful feeding of cattle. In the cold, wet climate of Scotland, care should be taken that, where natural shelter does not exist, artificial protection should be provided. How can any one expect cattle to do well if they are standing on a cold wet night in a field, with no better shelter than that provided by a wire fence? Again, if they lie down on the sodden ground, they can only grow hair and contract rheumatism.

House-feeding is almost a necessity for Scotland, except in the two months, June and July, and a good supply of old straw should always be kept for the early housing of the cattle. While I was North this year in the month of August, I was very grieved to hear many farmers tell me that they had plenty of green food for their feeding cattle, but could not take them in because they had not got a particle of straw. Others said to me, "We cannot spare men to look after the cattle till the harvest is over." In my opinion, this is the most short-sighted policy imaginable. What is the extra men's wages compared with the loss on the cattle?

To provide for the early housing of stock, a larger proportion of land should be devoted to growing green food, probably the best being a mixture of peas, beans, and oats. Food of this description should be sown at three or four intervals, so that it may be used when mature without being too ripe; and if a little old hay be added, all kinds of stock will do well on it. Time will not permit me to go further into the question of food except to say that too many turnips are generally used, and too little dry food. I do not believe in cake from which the oils have been extracted; use rather the whole seeds and also maize, which has proved such a splendid feeder in America. This would necessitate the use of a large copper, or steamer, to prepare the

food, but I am satisfied that the result would more than justify the extra expense.

The breeding and feeding of cattle is becoming more and more

A National Question.

Ireland is our natural beering country, and if the Government, through the Board of Agriculture, would only grant, say, £5,000 a year for ten years, to purchase one hundred of our best bull calves at an average of £50 each, and present them to the poorer districts in Ireland, we would soon be independent of Canadian or any other foreign stores. Thus, at much less cost than the price of one small torpedo boat, more could be done for the supply of food in time of war than could be done by half the fleet which would be required to escort supplies from abroad. This is not a political question, it is an imperial one; and if seriously dealt with on these lines, would also be a substantial help to the great industry which has been, and always will be, the backbone of our nation.

Ireland sends us about 500,000 (mostly store) cattle every year, and their value by improved breeding might easily be raised 10s., or even £1, per head. This scheme may at first sight be considered an impossible one; I am certain, however, that it is not only possible, but is also practical, and if the agricultural societies throughout the kingdom would petition the Board of Agriculture to adopt it, surely no Government would refuse to provide the very small sum required, and which would have such a far-reaching and beneficial effect, not only to the farming interest, but to the community at large.

Scheduled Contagious Diseases: What are they?

The Board of Agriculture has issued a useful little pamphlet describing the diseases of certain animals with a view of assisting inspectors and stock-owners to detect them. Cattle plague is described as a contagious and eruptive fever due to an undiscovered infective agent. Happily, it is many years since this fatal malady was experienced in this country.

We have also for some years got rid of pleuro-pneumonia. It is described as a contagious disease affecting the lungs and pleura, and due in an infective agent. The first signs of disease often escape notice. The temperature rises. A dry, husky cough is present, especially when the animal first gets on its feet or when made to run. In marked cases the breathing is rapid, and the movement of the flanks is increased. If punched in the ribs, the animal may grunt or show signs of pain. Some of the infected animals may become greatly emaciated, but others, especially those that have passed the acute stages, may appear to be in excellent condition. It does not follow, however, that the latter are cured; they continue to infect others for a very long time.

Foot-and-mouth disease is a contagious and eruptive fever, due to an undiscovered infective agent. All animals and human beings may suffer from this disease. Cattle, sheep, and pigs are especially liable. In cattle, sheep, and pigs the disease begins very suddenly and spreads with alarming rapidity. It is not a very fatal disease, but stock loses condition when attacked. The temperature rises. The animal smacks his lips and saliva drops from the mouth. Sometimes sickness is the first symptom noticed. In cattle, vesicles (blebs) are found inside the upper lip and on the tongue. The surface under the vesicle is red. The vesicles also appear between the toes and on the teats of the cow. They seldom appear on the body except in the pig. The milk from affected cows conveys the disease to other animals and to human beings. It should be destroyed or be thoroughly boiled before being used. The flesh of slaughtered animals is harmless and usually fit for food.

Sheep pox is a contagious eruptive fever caused by an agent which is as yet undiscovered. Only sheep are liable to contract this disease. The possibility of its being re-introduced is remote, because—although an inoculable disease—it has never appeared in this country otherwise than by the importation of diseased living animals, and the orders of the Board prohibit the landing in Great Britain of sheep from those countries in which sheep-pox exists.

Anthrax is a contagious disease caused by a microbe-bacillus Anthracis. Human beings and all animals are liable to anthrax. The disease is seen chiefly in cattle, sheep, and pigs, but not uncommonly in horses. The disease shows itself suddenly. It is very fatal, usually within forty-eight hours. It does not often in the United Kingdom spread with rapidity from animal to animal, but it may affect a number of swine at the same time if they had been fed on anthrax flesh or organs. A beast which a short time before appeared to be well, is found in a dead or dying condition. Frequently blood oozes from the nostrils and the anus. In cattle there are no typical symptoms, but in horses and pigs the region of the throat is often found to be swollen. The carcase is swollen. Blood is found around the nostrils and anus. The muscles are often infiltrated with blood at certain points. The lungs and glands are congested. The spleen is very much enlarged; it is softer and darker than normal, and its substance usually resembles tar.

In most parts of this country the enlargement of the spleen is of great diagnostic importance; but in those districts where Redwater exists, enlargement of the spleen may also be expected. In this case, however, the spleen substance has not the same fluid tarry appearance. The flesh is dangerous to animals and human beings. It is the height of folly on the part of a farmer to open an animal suspected to have died of anthrax, as he may thereby cause further infection of his premises. In cases of sudden death he should await a skilled opinion before disposing of the carcase.

Lord Durham's Fat Stock.

The annual sale of Lord Durham's fat stock took place at Bowes House Farm, near Fencehouses, on Monday, and, as usual, attracted a large company, the high-class quality of the stock being well-known and appreciated. Mr. E. A. Crow, of Sunderland, was the auctioneer, and he brought under the hammer 104 cattle and 445 sheep, which sold at good prices.

CATTLE.

	Average. £ s. d.	Total. £ s. d.
18 Shorthorn steers	22 16 11½	411 5 0
9 Shorthorn heifers	20 17 2⅔	187 15 0

Grand total	£3,481 2 6

Aberdeen County Council and the Canadian Cattle Question.

At a meeting of the Aberdeen County Council last week Mr. John Marr, Uppermill, proposed that the resolution passed by the council on Oct. 18, 1901, with regard to the importation of Candian cattle be rescinded. By that resolution the council requested the President of the Board of Agriculture to int oduce a bill into Parliament for the amendment of the Diseases of Animals Acts, 1894 and 1896, to the extent of empowering the Board of Agriculture to authorise the landing in this country of cattle from Canada without their being subjected to slaughter or quarantine at the port of landing.

Mr. Marr urged that while it might not be true that pleuro-pneumonia had been imported with Canadian cattle into this country, there were other very dangerous diseases among Canadian stock which, if once brought into this country, would cause immense loss to stock owners. He instanced cattle mange, the dealing with which was costing the Canadian Government a large amount of money. Mr. Marr also urged that it was only right—looking at the period that had elapsed since the feeling of the council had been taken on this question—that a vote should now be taken in order that they might see where they stood upon it. Mr. Lovie seconded.

Mr. Hutcheon moved an amendment that the resolution be not rescinded, holding that an effort should be made to restore to the farmer the right, under proper restriction, of buying and selling in the best market. Mr. Runciman seconded. On a division the amendment was carried by 21 to 15.

The 1905-6 edition of "The Guide to South Africa," for the use of tourists, sportsmen, invalids, and settlers, has made its appearance, and it contains an abundance of information which should prove of the greatest service to those enumerated. It is published at 2s. 6d. by Messrs. Sampson, Low, Marston, and Co., Ltd., 15A, Paternoster Row, London, E.C.

Horse Notes.

He doth nothing but talk of his horse.
—Merchant of Venice.

"What does it cost to plough an acre of land?" That is a question which is more easily asked than answered. There are so many things to take into consideration—the ploughman's wages, the cost of horse keep, interest and depreciation, and the cost of attendance when the horses are not at work; and several of these items are not very easily calculated. Then there are a few others that are not so simple of adjustment as they seem to be, such as, for instance, blacksmith, saddler, veterinary surgeon, etc.

Professor Wrightson has lately been endeavouring to answer the question with which I open my article, and in these short days it seems a subject which deserves consideration. Certainly it is one which does not get much minute consideration from farmers as a rule, and nine out of ten farmers one asks it would answer at random—"Oh, from 10s. to 11s." And it may be hinted, incidentally, that this difficulty of getting at the exact cost of farming operations is one of the farmer's many troubles, and not infrequently causes him considerable loss.

Some time ago I referred to the comparative cost of keeping an ox team and a horse team, a question which used to concern our ancestors very closely a hundred years ago. On that occasion I quoted the figures given by J. Bailey and G. Culley, who wrote an Agricultural Survey of Northumberland, which was published in 1797, and it is interesting to compare the estimate of the cost of horse keep and that made by Professor Wrightson in the present year of grace. Beginning with the summering of the horse, Messrs. Bailey and Culley estimate that he will eat two acres of grass, which they value at £2. Professor Wrightson estimates 22 weeks' grazing at 1s. 6d. per week, and 1s. 6d. per week for cut clover, etc., making a total of £3 6s. for the summer. I am inclined to think Professor Wrightson's estimate a little below the mark, though, taking the average rent and value of money into consideration, it does not come out much below that of Messrs. Bailey and Culley. But surely 1s. 6d. per week is very little for grazing—and there is a certain percentage of labour, a small one, I admit, but still a percentage—on the green food that is soiled. I think the green meat which a horse consumes in the way of grass and clover, etc., cannot be very well estimated at less than £4 in these days; at any rate, on a good farm, the grass of which, including rates and taxes, will stand to about £2 per acre or even more.

When we come to the winter food we find Professor Wrightson differing considerably from his Northumberland predecessors. He is much more liberal in his allowance of oats, giving 104 bushels per horse against 70 bushels. Curiously enough, the price of oats is put at the same figure, and I must say I think Professor Wrightson values his oats rather low at 2s. per bushel. I should think 18s. per quarter the lowest price at which they should be averaged, and this will make an increase of £2 14s. in the cost of oats, bringing the amount from £10 8s. to £13 2s. Professor Wrightson says that his allowance is a liberal one, and that many farm horses do not get so many oats, which is true enough. But they aught to get that allowance, and in making the estimate of the cost of ploughing an acre of land we should take the liberal treatment which means good work, and not the starvation policy of seeing how little a horse can work on.

Of hay Messrs. Bayley and Culley think that a horse will eat 1½ tons, which is exactly double the quantity which Professor Wrightson allows them. The price of hay is quoted at £2 in 1797, and at 50s. in the present year, so that the total in the former year is £3 for hay, and in the latter £1 17s. 6d. But Professor Wrightson allows £1 for chaff and £1 for roots, which may be regarded as a liberal allowance. These two items are, of course, not noticed by Messrs. Bailey and Culley,

but there is 15s. for straw, which will probably be meant for straw consumed and not used for litter. The litter, Professor Wrightson very justly says, is paid for by the manure. Altogether Messrs. Bailey and Culley estimate the cost of food for a carthorse for a year at £12 10s., and Professor Wrightson estimates it at £17 11s. 6d.; which, taking into consideration the difference in the value of money, is not so very far off the same mark.

We now come to a rather more difficult part of the question, for interest and depreciation have to be considered. Messrs. Bailey and Culley go very briefly into this part of the cost. Saddler and blacksmith £1, and an annuity of £2 5s. per annum to pay off the sum of £25, the estimated value of a four-year-old horse in sixteen years, including compound interest. Professor Wrightson's estimate is, I think, a much fairer way of coming to a conclusion. He puts the value of a six-year-old horse at £45, places depreciation at £2 10s per annum and risk at 10 per cent., on an average value of £30—two-thirds the value of his average priced six-year-old. This works out at a bigger sum than Messrs. Bailey and Culley's annuity scheme would do, and it will, I think, be admitted that it is more like meeting the case than this. Then comes veterinary expenses 10s., and stable utensils and repairs 10s., two items which do not appear in the older book.

Altogether it works out at a total of £15 15s. for the keep of a horse in 1797, and £27 11s. 6d. in 1905. The former estimate, as has been pointed out, left several things out of consideration. The latter is a very full one, though in some respects, perhaps, Professor Wrightson values too lightly, as has already been pointed out. He thinks, however, that his estimate admits of a liberal discount, and that £25 would represent the cost of an ordinary draught horse on the farm. Perhaps 10s. per week would be a fair thing—certainly it does not err on the liberal side if horses are fairly done.

The estimate of 290 working days in a year is a fair one, and £26 as the cost of the keep of a cart-horse, including insurance, depreciation, etc., works out at a fraction over 1s. 9½d. per day. Then comes the cost of ploughing. A pair of horses will cost 3s. 7d—Wrightson says 3s. 5½d. He places the wages of the ploughman at 2s. 6d. per day. Speaking from my own experience, I should think 3s. per day more likely, for there is no tendency for wages to decrease. Then comes the wear and tear of the plough, and 5 per cent. interest on the prime cost. This Professor Wrightson puts down at 6d. per day, and perhaps he is not very far wide of the mark. If he errs it is on the side of under, rather than over, estimating. So that he estimates the cost of a day's work with a pair of horses and plough at 6s. 5½d. This, I think, rather too small an estimate, and that a man who based his calculations upon it would find at the end of the year that his prime outlay had not been returned. I should be inclined, taking one year with another, to put the average cost of a pair of horses, man, and plough at 7s. 1d. per day. This would make, supposing the quantity ploughed per day to be three-quarters of an acre, the cost of ploughing work out at 9s. 5d. per acre. Professor Wrightson's figures work out at 8s. 4d. Perhaps somewhere between the two the mean lies. I know I always used to consider that a first ploughing if well done cost over 9s. per acre.

Professor Wrightson is quite correct in pointing out that if a farmer charges against his crops a haulier's profit it is impossible to make his crops show a prifit, and that it is a farmer's business to make his crops show a profit. Of course the principal thing is to make a tangible profit, and not a profit which merely exists on paper, and it may be urged that if the crops lose and the horses gain, what does it matter? It matters this much, that the farmer may—mind, I don't say he will, but he may—endeavour to make the crops pay by curtailing the horse labour, and so miss the profit altogether.

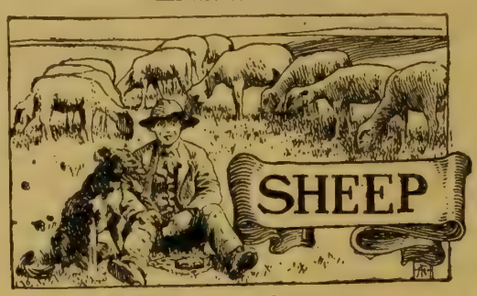
There is another point, however, which Professor Wrightson does not touch upon, and which he could not very well touch upon, when he was considering a question which was merely that of prime cost. I mean the question of the profit arising from the sale of draught horses. The farmer who keeps a horse or two more than he wants—who either buys them as yearlings or two year olds, or breeds them and sells them out at five or six years old, has a ready source of income with anything like average luck, and his profits from his horses will be considerably enhanced, or the cost of his horse labour considerably decreased, whichever way he likes to put it. But if he adopts this plan, which he will do if he is an enterprising man with plenty of capital, he will have to deal with horses worth considerably more than £45 at six years old, and consequently the amount of depreciation and risk would be larger. Depreciation, however, except from accident, there should never be, though, of course, accidents will happen, in spite of all the care that can be taken.

THE LOOKER-ON.

Sales at York.

Messrs. Walker and Sons' annual Christmas fair horse sales at their repository, York, took place last week, commencing on Tuesday. Full catalogues were presented each day, and there was a good attendance of buyers, but trade was rather quiet. The following were the chief prices:—

Huntsman, br g, 6 years, 15.3½ hh, 70 gs; Safety, ch g, 6 years, 16 hh, 55 gs; Hop Scotch, ch g, 6 years, 16.2 hh, 65 gs; bay gelding, 6 years, 16.1 hh, 50 gs; Beauty Bright, bl m, 6 years 16 hh, 56 gs; Quick, br m, 6 years, 16 hh, 90 gs; Lady Molly, bay m, 5 years, 16 hh, 52 gs; ch. gelding, rising 6 years, 16.2 hh, 50 gs; bay mare, rising 5 years, 16.1 hh, 70 gs; The Druid, ch g, 7 years, 16 hh, 64 gs; chestnut mare, 7 years, 15.2½ hh, 80 gs; grey mare, 6 years, 16 hh, 74 gs; Clipper, br g, 5 years, 17 hh, 100 gs; Rocket, br g, 4 years, 16.1 hh, 86 gs; The Nipper bay g, 4 years, 16 hh, 60 gs; Sportsman, bay g, 7 years, 16.1 hh, 50 gs; brown mare, 6 years, 16 hh, 60 gs; Rushlight, chestnut mare, 6 years, 16 hh, 70 gs; bay gelding, 6 years, 15.3 hh, 50 gs; chestnut gelding, 5 years, 15.3 hh, 55 gs; Victor brown gelding, 6 years, 16.1 hh, 62 gs; Tip Top, bay gelding, 6 years, 15.3, 50 gs; Warrior, chestnut gelding, 6 years, 15.3½ hh, 90 gs; chestnut gelding, rising 5 years, about 15.3 hh, 70 gs; Baldface, bay gelding, 6 years, 16.2, 72 gs; Fanny, brown mare, 7 years off, 15.2, and Bessy, brown mare, rising 5 years, 15.2, 95 gs; Phyllis, chestnut mare, rising 6 years 16.1, and Phil May, chestnut gelding, rising 5 years, 16.1, 80 gs.



Notes and Jottings.

Twelve months have elapsed since the first of these notes were penned for 1905. The sheepman's year has been, like all others, one with its successes and otherwise, but, fortunately for those whose interests are represented here, success has been much in the ascendant all during the period under review.

All through the year, with but hardly an exception, the mutton market has been most favourable to the seller. Despite the large supplies of mutton imported, probably larger than ever before, the price of home-grown and fed mutton has ruled at a satisfactory range of price. There has been profit in mutton production all through the season, and what is equally satisfactory, the probabilities are in favour of these prices continuing. The stud stock of sheep shows but little, if any, signs of increase, and on all hands it is admitted that the demand for mutton continues to show decided increase. Therefore, flockmasters can, we think, so far as regards this part of their business, rest satisfied with their prospects. Then, in respect to wool, its rise in value has been a general one, and all breeds have participated therein. It would be difficult to estimate how much additional income has accrued to the flockmaster from this rise in the price of wool, but be it what it may, the rise has been of great advantage to the flockmaster. Here again we are pleased to note there is no sign of any immediate reduction in price. An article by one of the leading North American authorities on wool has recently been before us, and it is therein stated, supported by a considerable array of statistical facts, that at any rate no decline of any moment in the price need be anticipated for another twelve months at least.

There is yet another section of the flockmaster's business to which reference should be made, namely that very profitable one of ram-breeding. So far as regards the export demand for the past year, all that can be said definitely at the present time is that there have been more sheep exported than in the previous year at prices considerably in excess of those recorded for that period.

As regards the future prospects of this demand, there is every indication of its continuance for some time to come, at its present limit. There will be ebbs and flows in the demand, no doubt, but, taking a review of the whole circumstances that most directly affect this trade there appears no real reason why the same should not be a continuous one.

It may be, and probably will, that greater care in selection will be taken by the purchaser in the near future. Should this be so, it will be of great benefit to the home breeder, because nothing does so much injury to the export trade than for the purchaser abroad to be dissatisfied with the result of his purchase. This point is one far too often overlooked by both the export agent and the vendor here. The former takes a few animals of the lower grade, and hopes thereby to secure larger profit, the latter readily sells such because he receives a price considerably in excess of the actual worth.

This result is, doubtless, tempting to the flockmaster at home, but instead of being to his advantage the contrary is the case, for such sheep imported at great expense as stud rams, gain for their breeder a reputation such as no man desires, namely, as a breeder of stud rams which, when tested by the quality of the resultant produce are found unsatisfactory, and to such breeders few, if any, repeat orders are given.

A grievance, common alike to flockmasters and cattlemen, is that all sheep and cattle imported alive are sold to the consumers for something they are not. One cannot say they are sold as English because the vendor will reply, we only sell home-killed meat, and do not limit our supplies to home-grown, fed and killed.

It is probably a difficult matter to deal with, but some steps should be taken alike in the interest of the breeder, feeder, and consumer, to prevent the purveyor of meat being able to add to his already ample profit additional profit by means of selling to customers imported mutton, or the produce of imported sheep, no matter under what disguise, as English.

Such practice is unfair in every sense of the word, and seeing it is principally on account of the large quantity now required by our population that few imports are allowed, the same authority that wisely determines this shall be so, ought to step in see that the consumers for whose benefit these cheaper meats are imported shall not be done out of that benefit by the middlemen through whose hands it passes on the way from the producer to consumer.

The export demand still continues. Several important shipments of Lincoln sheep from the well-known flocks owned by Messrs. Henry Dudding and W. B. Swallow have recently been dispatched to the Argentine, including a very typical lot of ewes.

The Border Leicester breed has been exported to the Argentine during the past year in much larger number than has been the case in former years. We understand from one of its exporters that the result of the trial importations made some time back has been satisfactory, and that its more than probable the future demand for this breed will be of some considerable extent. During the past week three first-class selections of the Kent or Romney Marsh sheep have been exported to the Argentine, Mr. A. Amos, of Spring Grove, Wye, Ashford, Kent, has sent off fifteen rams through the agency of Mr. Goodchild, the Earl of Verulam has dispatched, through Mr. H. T. Harding, a capital selection of the yearling rams, and the last-named exporter has also taken a selection of three very first-class ram lambs from Mr. C. File's well-known flock.

It will be remembered that the National Sheep Breeders' Association, supported by the influence of the Board of Agriculture, were enabled, after a conference with the representatives of the railway companies, as represented by the Railway Clearing House, to obtain certain valuable concessions in respect to the carriage of rams by passenger train. From information before us, it appears that the Scotch Railways desire to repudiate this arrangement. Surely this is not right, and it is a matter that requires prompt attention. Railways are always trying to show how much they desire to help the producer, and yet here is a case in which the Scotch railways refuse to recognise an arrangement that was offered to and accepted by the representatives of the sheep-breeding industry by that great central body of the railways of Great Britain.

"The Agricultural Annual and Mark Lane Express Almanac for 1906" is now ready. It contains specially written articles on all subjects of interest to a farmer. Send at once for a copy. Price 1s.; post free, 1s. 4d. "Mark Lane Express" Office, 3, Wellington Street, Strand, London, W.C.—[ADVT.]

From Messrs. Dickson and Robinson, of Cathedral Street, Manchester, has come to hand a new and enlarged catalogue of vegetable and flower seeds, potatoes, mushroom spawn, manures, garden implements and sundries, etc. It is nicely illustrated and tastefully covered, while the contents should prove useful to gardeners and others.

SOCIETIES.

National Pig Breeders.

A meeting of the Council of the National Pig Breeders' Association was held by permission in the Agricultural Hall, Islington, on Tuesday, the 5th inst., when Mr. A. S. Gibson was elected to the chair.

The minutes of the last meeting were read and confirmed. The secretary referred to the loss the Council had sustained by the death of their President, Mr. P. L. Mills, and stated that it would be necessary to elect someone to fill the office for the remainder of the year.

Mr. Ibbotson proposed that Mr. Howard Taylor be asked to accept the office for the remainder of the year. This was seconded by Mr. Hall and carried unanimously.

Mr. Ibbotson moved that a vote of condolence be sent to Mrs. Mills from the Council, expressing their deep regret at the loss of their president. They all knew him so well, and the interest he had taken in their work, that it did not require many words from him in moving the resolution. They saw him as recently as the Royal Show, and would miss him very much. The resolution was carried unanimously, and the secretary was instructed to forward a copy of it to Mrs. Mills.

Mr. Ibbotson presented the report of the Finance Committee. The balance at the bank was £189 5s. 3d., and a sum of £100 had been invested during the year. Twenty members were in arrear with their subscriptions. Six members had sent in their resignations. This was seconded by Mr. Philip and adopted. The secretary was instructed to take steps for collecting the outstanding subscriptions after January 1.

In presenting the report of the Editing Committee, the Chairman stated that the number of entries in the last volume of the Herd Book numbered 917, and, though less than the previous year, was well above the average. Two tenders had been received for the printing of Vol. 22, one from a Nottingham firm and the other from the Wilts County Mirror Co., Salisbury. The prices quoted were practically the same, but in consequence of the satisfactory way in which the Wilts firm had turned out the work in former years it was decided again to place the work in their hands. It was resolved to hold the next meeting of the Committee for the purpose of revising the entries for Vol. 22 at Derby, on Monday, February 12, 1906.

The Secretary read a list of the winners of the gold and silver medals in 1905, and after some discussion it was decided to offer gold and silver medals on the same conditions as in previous years, for 1906. Mr. Ibbotson thought they might do a little more for the R.A.S.E. now that they were starting off again in the provinces, possibly towards the augmentation of the prize fund. After some discussion Mr. Philip proposed that a class for sows under eighteen months for the Large, Middle, and Tamworth breeds should be added, with prizes in each of value £7, £3, and £2. This was agreed upon, and the secretary was instructed to forward the offer to the Council of the R.A.S.E.

Mr. Apperly was elected on the Council in place of the late Mr. Mills, and the following new members were elected:—Sir Henry Jackson, Messrs. Archer, Aries, Morris, Reeves, Sinclair, Smith, and Waddington.

The next meeting was arranged for March 7, 1906, at Birmingham. A vote of thanks to the Council of the Smithfield Club for the use of the room, and to the Chairman for presiding was passed.

Pig Breeders Societies' Joint Board.

A meeting of the Joint Board of the Pig Breeders' Society was held in the Prince's Saloon, Agricultural Hall, Islington, on Tuesday, the 5th inst., when, on the motion of Mr. Prentice, seconded by Mr. Marriner, Mr. Pittman King was elected chairman for the ensuing year.

The Chairman remarked that the only business arising out of the minutes was the movement of pigs from show to show. The secretary was instructed to write to the county authorities asking for their co-operation in the matter, also to give all the facilities they could for moving pigs from one show to another.

On the question of receiving communications, Mr. Prentice called attention to the difficulty experienced in sending pigs to Ireland and the delay that occurred in the communications. Mr. Carter, an inspector from the Board of Agriculture, explained that the English Board of Agriculture had no jurisdiction over the regulations of the Irish Board, and the best thing they could do would be to approach the Irish Board themselves.

Mr. Prentice then moved the following resolution: "That the attention of the Department of Agriculture (Ireland) be drawn to the almost complete cessation of trade in pedigree swine between this country and Ireland, in consequence of the prohibitory character of the conditions imposed by that Department in respect to the importation of swine, that the Department be urged to make reasonable modifications in the existing conditions, and that a copy of this resolution be forwarded to the President of the Board of Agriculture."

Mr. Berry Torr seconded. It was decided to do this, and at the same time write to the English Board to use their best endeavours with the Irish Board and get things altered.

Mr. Carter's attention was then called to the delay in the transit of a boar from Nottingham into Lancashire in November last. He pointed out that this was entirely the fault of the local authorities, and they had better complain to them, when Mr. Bery Torr moved that the Board of Agriculture be requested to inquire into the case. This was seconded by Mr. Hiscock and agreed to.

Mr. Carter then said that since he last saw them at the Royal Show the Board of Agriculture had made some progress with regard to the combination of counties for the purpose of getting some uniformity in the regulations governing the movement of pigs, and produced a map showing the newly added districts. Considerable satisfaction was expressed at the progress made, and the hope was expressed that the Board would soon have the work complete. On the motion of Mr. Marriner, seconded by Mr. Torr, Mr. Carter was heartily thanked for his attendance that day.

Mr. Marriner said before they broke up that day he should like to propose that the best thanks of the Joint Board be given to Mr. John Barron for his past services as the chairman of this Board, their deep sympathy with him in his illness, and their earnest hope for his better health, and that the secretary be asked to convey the same. Mr. Hiscock seconded, and Mr. Carter expressed a desire to be associated with the resolution, which was carried unanimously.

The date of the next meeting was fixed for Friday, June 1, 1906, at the Bath and West Show.

British Dairy Farmers.

A meeting of the Council of the British Dairy Farmers' Association was held at 12, Hanover Square, London, W., on the 6th inst, Mr. Geo F. Roumieu, J.P. (vice-president) in the chair.

Five new members were first elected, then on behalf of the Finance and General Purposes Committee it was reported that the balance at bank on current account on December 1 was £1,261 7s. 4d., against which the Committee recommended payments amounting to £683 7s. 4d. The Committee presented a return showing that in the five weeks ended December 2 the imports of fresh milk into the United Kingdom were 75 cwt., being precisely the same quantity as in the corresponding weeks of last year. In the same period the imports of milk and cream amounted to 542 compared with 476 cwt.; of preserved milk 550 against 259 cwt.; and of condensed milk 94,977 against 84,910 cwt.

The Show Committee submitted a brief report relative to several matters arising out of the recent Dairy Show.

Mr. T. Carrick, as chairman of the Conference Committee, reported that at the invitation of several members residing in Shropshire, the secretary had visited that county in order to consult as to the probabilities of a successful Dairy Conference being organised there next year. The proposal had been received with so much favour, and the promises of active co-operation were so encouraging, that the Committee had no hesitation in recommending that the Dairy Conference and Excursions of 1906 take place in Shropshire, with Shrewsbury as headquarters. This recommendation was unanimously adopted by the Council, the secretary being instructed to again visit the district, and to draft a programme for the Committee's consideration.

The Sub-Committee re the Sale of Milk Regulations presented a report embodying their recommendations as to the facilities which the Board of Agriculture should be asked to give to vendors under new regulations. A lengthy discussion ensued, and eventually the report was referred back to the Sub-Committee for reconsideration.

Various Standing Committees for 1906 were appointed, as well as representatives on the Joint Committee of the British Dairy Institute, and delegaes to the Central Chamber of Agriculture.

A cordial vote of thanks was passed to Lord Northbourne for his services as president during the year, and the next meeting of the Council was fixed for February 7.

Agricultural Co-operation in the West.

The report presented at the twenty sixth annual meeting of the Western Counties Agricultural Co-operative Association, held at Taunton, on the 16th inst., showed that the Society continues to grow in popularity and usefulness.

The sales in 1905, it stated, amounted to £482,878, and it was proposed to distribute £8,645 in bonuses to purchasing shareholders and members, making a total in seventeen years of £97,012. New shareholders and members enrolled during the year numbered 625, and sales had increased by £10,851. The continued inflow of members and the steady increase of sales, the report continued, were evidence of the business being conducted to the advantage and satisfaction of all who had been loyal in their support. The directors proposed that the net profit for the year of £11,597 1s. 7d. should be divided as follows:—Dividend of 5 per cent. on share capital, £1,324 9s. 2d.; reserve fund (making with premiums on shares, £1,000), £945; bonus to shareholders and members on net purchases at 4½d. per pound, equal to over 30 per cent. on the share capital, or from 1s. 9d. to 3s. 6d. per ton allowance on feeding stuffs and manures, £8,645 13s. 3d.; bonus to employees, £300; balance to general revenue account, £381 19s. 2d.

Mr. Digby Collins, D.L., J.P., C.A., of Newton Ferrers, Callington, Cornwall, chairman of the Council of Management, in proposing the adoption of the report and balance-sheet, said he did so with the greatest possible pleasure, because after studying most carefully everything that the report and balance-sheet contained, he had come to the conclusion, without hesitation, that there was nothing whatsoever in them to diminish in any way the satisfaction of the shareholders and members with the present position of the Association or to shake their confidence in its future (hear, hear). The association had emerged from the difficulties which he had explained to them with credit to itself, to the managing director, to the able and zealous secretary, and to the managers of the Bristol and local depôts; in fact, all the staff, from the managing director down to those engaged in the humblest sphere of work, had done their very utmost to serve the Association.

Mr. W. Westlake seconded the motion, which was carried.

On the motion of Mr. G. Martyn, seconded by Mr. Langdon, the sum of £600 was voted as the directors' remuneration for the year.

Mr. Vosper proposed, and Mr. R. D. Hancock seconded, the re-election of the three retiring directors, Messrs. Digby Collins, S. Browne, and J. B. Stevens, and this was carried.

The shareholders and a number of local agriculturists were subsequently entertained to dinner, Mr. Digby Collins again presiding.

Suffolk Horse.

A Council meeting of the Suffolk Horse Society was held at the Town Hall, Ipswich, on Tuesday.

Mr. R. Eaton White presided, and at the outset said he thought they could not begin the business on the agenda without first alluding to the great loss the Society had sustained through the death of their good friend, Mr. F. G. Cook. It was a matter of deep regret that att wo consecutive meetings they had to report the death of valuable members of the Society. The late Mr. F. G. Cook took the greatest possible interest in the Society, and he was a most successful breeder of choice examples of the breed. These losses reminded those who survived that their duty was, on their part, to do the best they could to keep up the old breed, and hand it on better for generations to come. It would be the wish of all present that a vote of condolence should be sent on behalf of the Society to the family of the late Mr. Cook.

The proposition was agreed to amidst silence.

The Secretary read letters of apology for inability to be present from Sir Cuthbert Quilter, Bart., M.P. (President), Mr. C. S. Wentworth Reeve, Mr. W. R. Hustler, Mr. Alfred J. Smith, Mr. J. M. Longe, Mr. E. A Cook, and the Hon. Louis Johnstone. The last-named gentleman in his letter added:—"My feeling on the subject of judges is that it is advisable to get judges from outside the county as far as possible, and that it would be a good thing if we could persuade some of our Colonial buyers to act as judges, or any large dealer or buyer of cart horses. I am also of opinion that the veterinary surgeon who tests the animals should also be a man from outside the county, and preferably from London or any big town."

The Council having selected the animals whose portraits were to appear in the next volume, Mr. Herman Biddell observed that he had an interesting picture of five mares and foals—four of them portraits taken twenty-five years ago—and he should be happy to supply a copy of it as an illustration for the next volume, and to add a little history in respect to the animals.

The Council were occupied some time in the selection of names to be forwarded to the Royal

Society for their consideration when selecting judges for the next show, at Derby. Having regard to the wish expressed in the letter mentioned above, the Council selected six gentlemen, three from Suffolk, and three from outside the county.

Th Chairman raised the question as to the propriety of the prefixes being assigned only to breeders of the animals. A gentleman might buy a nice animal, which he thought would do him credit, and he gave it a certain name or prefix, and he appeared afterwards to the outside world as the breeder of the animal, so that the real breeder lost the credit.

The Council agreed that this was a point that should be looked into.

Norfolk.

A most encouraging report was presented at the annual meeting of the Norfolk Agricultural Association held at Norwich on the 16th instant., Sir W. Ffolks presiding. It was stated that the membership was 659, whilst the receipts for the year were the largest on record, being £206 more than in 1904, and £155 more than the next highest record. The average annual receipts for the past ten years were £2,705, and this year they were £644 above the average. The prize money awarded had averaged £1,449 during the previous five years, but this year it was £208 above the average, and was now £567 more than it was ten years ago. It was distributed as follows:—To exhibitors in Norfolk, £850; to exhibitors outside the county, £570; so that 60 per cent. of the members' money was won by county exhibitors. The balance sheet showed subscriptions and donations amounting to £344 11s.; special prizes, including the amount subscribed by King's Lynn and district, £126 10s.; entrance fees at summer show, £408 18s. 8d.; admission to show ground, £1,295 2s. 1d.; right of selling refreshments, etc., £102; receipts at spring show, £83 2s. 6d.; bringing up the total receipts to £3,150 13s. 3d. The payments included:—Prizes awarded, £1,449 9s., or 59½ per cent. of the receipts; other expenses, £987 19s. 4d., or 40½ per cent. of ditto, making the total expenses £2,437 8s. 4d., and showing a gain on the year's working carried to capital account of £713 4s. 11d. Out of this sum they had applied £550 in the purchase of further Norwich Corporation Bonds, so that the capital of the association now amounted to £3,453 19s. 7d.

Mr. Harvey Mason, who moved the adoption of the report and accounts, said it was a matter for congratulation that during the year fifty-eight new members had joined, of whom no less than thirty-one were secured through the influence of Sir William Hoikes. Mr. Mason paid a tribute to the work of the secretary, Mr. Barker, and his assistant, Mr. Kerridge.

Mr. W. Mitchell seconded the adoption of the report, and said that the amount of the prize-money this year was £367 more than it was ten years ago. The average net working expenses for the last ten years had been £944, whereas the average for the previous ten years was £1,115, or a difference of £117 per annum, which meant a total gain to the society of £1,710 in the last ten years.

The report was adopted; but the question of the election of a president and the town for next year's show was allowed to stand over, as negotiations were in progress with one or two towns in East Norfolk.

The members of the council were re-elected, Mr. Clement Gaze being elected to fill the vacancy caused by his father's death.

The motion of Mr. Mitchell that the secretary and his assistant be re-elected, with an increase of £25 in their salaries, was carried.

Yorkshire.

The annual meeting of the Yorkshire Agricultural Society was held at York on Tuesday, Lord Middleton presiding.

The Secretary (Mr. John Maughan) presented his report on the Hull Show, in the course of which he stated that the Hull Local Committee raised a fund of £1,841 1s. 1d., and the financial result is an estimated profit, on capital account, of £37 18s. 4d. The meeting was a great success, and the profit, exclusive of extraordinary expenditure, is estimated at £561. The profit on revenue account is estimated at £352 16s. 9d., as compared with £406 8s. 11d. in 1904, and although the receipts at the gates and grand stand were £314 11s. less, the income is £206 2s. more. The attendance did not reach expectations, 49,951 persons passing through the turnstiles, a decrease of 9,608 as compared with 1899, and 9,45½ on last year's attendance at Huddersfield. The report went on to state:

"It is an indisputable fact that the public do not attend the large shows in the same multitudes as formerly partly, no doubt, due to lack of interest, but principally owing to the present facilities for more extended travel in search of health or amusement. No agricultural society can exist without gate money, and it is not to be expected that the artisan, though he is interested in machinery and other exhibits which he understands, pays his shilling out of regard to the agriculturist, to wander through miles of shedding, housing animals of whose merits he is in ignorance. Since it is the agriculturist who benefits, amusements within reasonable limits are perfectly justifiable, especially when it is taken into consideration that approximately 50 per cent. of the total income is dependent on the attendance, and nearly 90 per cent. of those who visit the show pay 1s. admittance."

There are now 605 life members of the society, which is a record, and 884 annual subscribers, and one honorary, a total of 1,490, which is also a record. Next year it is hoped that a forestry department will be added to the show. No department has proved more useful than the horse-shoeing competitions, and if the prizes offered for cottages did not bring many entries, the exhibition was interesting.

Votes of thanks were passed to the retiring President (Lord Herries), to the Mayor and Corporation of Hull, and the Hull Local Committee and officials for their services.

The chairman proposed the election of the Marquess of Zetland as president for the ensuing year. He remarked that in the district in which the show was to be held in 1906 (Middlesbrough) they could find no one more suitable for the position. The Marquess had consented to accept the post.

Mr. W. H. A. Wharton seconded the motion, which was carried with applause.

The vice-presidents were re-elected, and Lord Herries was elected in the place of the late Sir Robert Gunter, Bart.

Alteration of Rules.

A meeting of the Council was held prior to the annual meeting, when it was resolved to divide the catalogue in future, and issue the live stock and implement entries in two separate volumes. The two-shearling rams class in the Leicester section was struck out, and the prizes were increased in the other classes in the section. The prizes in the three-shearling rams and three-shearling gimmers (Wensleydale) classes were increased, and brought up to the same amount as given for other breeds. Certain alterations were also made in the dentition rules of the class for pigs of twelve months old, and it was decided to confine the jumping competitions to the second day, so that the horses will only require to be in the showyard on that day, and to have a military display on the third day.

With regard to harness horses, cross entries are to be allowed from several of the Hackney classes, and those horses entered in the harness classes only will not be required to be stabled on the ground. It is also proposed to have prizes for polo ponies, both for make and shape and for handiness. In the Shire horse section, classes for two and three year old agricultural geldings were introduced, while there will also be a class in the honey section restricted to cottagers. Further developments are intended next year with reference to the working dairy, which has proved a great success.

British Berkshire.

A Council Meeting of the British Berkshire Pig Society was held on the 6th inst., in the Stewards' Room (by kind permission) at the Agricultural Hall, Islington. In the temporary absence of the president, H. R. H. Prince Christian was invited to take the chair, to which he kindly consented.

After the minutes were read and approved the adoption of the report from the Finance and other committees was moved by J. P. King, Esq., and seconded by A. Ashworth, Esq., and carried. The following five members were re-appointed on the Finance and General Purposes Committees, etc., viz., Messrs. J. P. King, T. E. Hayter, W. T. Hall, W. A. Barnes, and J. W. Kimber

Two members of the Deputation Committees on the Joint Branch of Breed Societies, viz., Messrs. J. P. King and W. T. Hall were re-appointed with T. E. Hayter in place of Mr. A. Hiscock, jun., retired.

A letter was considered from the Royal Agricultural Society, re prizes for their show, and it was resolved to offer in addition to the prize of last year, further prizes of £7, £3, £2, for the best breeding sow farrowed in 1905, this year being eliminated from the similar class already existing. With reference to champion prizes given by this Society a resolution was made: "That any animal in the first prize classes shall be competent to compete for the Society's champion prize."

Seven new members were elected

A suggestion was made by Mr. W. A. Ashworth that something should be done to prevent drifting away by breeders from the old type of "Berkshires" as some of this year's exhibits have shown. That prizes had been awarded to some animals with leggy light hams, instead of the short legged deep hams of old, also many of the animals now exhibited had faces too long and straight. After a discussion it was decided to have a copy of the Berkshire standard of excellence inserted in the next volume, and for the present trust that judges of Berkshires will award prizes to animals of the trust type.

The General Meeting of members took place immediately afterwards, the president (Sir Alexander Henderson, Bart., M.P.,) in the chair. After the minutes were read Arthur S. Gibson, Esq., was unanimously elected president for the year 1906.

Arthur E. Preston, Esq., was reappointed auditor.

The report of the scrutineers showed that the five retiring members were re-elected, viz., H.R.H. Prince Christian, and Messrs. Alfred Ashworth, W. A. Barnes, Arthur Hiscock, and Russell Swanwick.

After the report from the Council was read the president commented on the very satisfactory financial position of the Society, it also showed an increase of members, and a growing interest in the objects of the Society, and concluded by remarking that he personally took a great interest in "Berkshires," and any assistance he might be able to render would be willingly given.

The adoption of the report was then proposed by H.R.H. Prince Christian and seconded by J. P. King, Esq., and carried unanimously.

A most hearty vote of thanks was then accorded to the president for taking the chair and carried with acclamation

Cumberland and Westmorland Chamber.

At the last meeting of the Cumberland and Westmorland Chamber of Agriculture Mr. James Watt, of Knowefield, proposed that Lord Lonsdale take the chair, and explained that this was his Lordship's first visit to the Chamber, but he could assure him of a hearty welcome from all amongst them.

Motors and the Roads.

Mr. Heskett, of Plumpton Hall, opened an interesting discussion on "Motor Traffic on Highways," with a view to sending a resolution from the Chamber to the Royal Commission on Motor Cars. Referring to the dust nuisance, he said that most of the houses in the North were built alongside the highways, and people who lived in houses within twenty yards of the road found it impossible to keep their windows open owing to the nuisance caused by the dust. But if the damage was great to these people, it was infinitely greater to farmers who had land and crops. The greater the speed of motors, he thought, the greater the dust nuisance and the greater the damage to highways. The cost of the highways was rising at an alarming rate, and he attributed it greatly to the increase of motor traffic. There was another important matter—that was with regard to head lights. Only the previous night a car passed him on the main road, and for fully 100 yards in front of the car he could see nothing but the glare of the lamp. "I think," said Mr. Heskett, "that the whole sum paid for motor car licences in England ought to be pooled, and from it local authorities ought to be reimbursed for damage done to roads according to their respective mileage." The cost of the licences ought also to be greatly increased.

Lord Morpeth thought motorist offenders ought to be more severely punished.

One speaker said that people had now to wash the dust from their vegetables before they cooked them.

Lord Lonsdale: They generally do wash them, don't they? (Laughter.)

Mr. Watt suggested that if the unemployed were engaged to widen the roads, the centre reserved for motors, it might be a good thing. He thought higher fixed machines with solid tyres would lessen the dust nuisance.

Lord Lonsdale said, although he did a great deal of motoring, he was also considerably interested in agriculture. His own idea was that motorists should be punished to the extreme if they drove to the common danger. He would not limit the speed of cars, except near houses, and signals should be put up before all cross roads. As regarded the dazzling lamps, he suggested that hoods should be placed on the top of lamps, which would throw the light on the ground. He also thought that no man ought to be licensed as a motorist who could not speak the English language. There was great difficulty with foreign chauffeurs. Some could not

"The Agricultural Annual and Mark Lane Express Almanac for 1906" is now ready. It contains specially written articles on all subjects of interest to a farmer. Send at once for a copy. Price 1s.; post free, 1s 4d. "Mark Lane Express" Office, 3, Wellington Street, Strand, London, W.C. [ADVT.]

speak the language, and there were those who did not want to. (Laughter.) He considered that the taxation on cars should be higher, and that it should be graduated according to horse-power. A motor was the rich man's amusement. If used for business purposes it was usually as an advertisement, which should be paid for.

Eventually a resolution was carried to the effect that the tax on motors be materially increased, and paid into the Imperial Exchequer, and distributed to county authorities, according to the mileage of their roads. As to the speed limit no amendment was suggested, except in places where the county authorities considered that a very slow pace should be adopted, but it was resolved that something ought to be done to prevent motor lamps showing on the roads excessive light during the night time.

Sussex Herd Book.

Eleven new members were elected at the Council Meeting of the Sussex Herd Book Society, held at the Royal Agricultural Hall during the Smithfield Club Show.

The Editing and General Purposes Committee were appointed to consist of Lord Northbourne, the Hon. R. Nevill, Earl Winterton, Messrs. T. Bannister, E. E. Braby, J. E. Budd, A. Stanford, and Gerald Warde. The same were also deputed to act as a Committee of Inspection of non-pedigree animals in a number of herds, sent for registration in Volume 21 of the Herd Book.

The question of offering prizes for Sussex cattle in 1906 was considered, and the Council resolved to offer prize money and medals at the Royal Show to be held at Derby in June, and medals at shows of the Bath and West of England Society, Royal Counties Agricultural Society, Sussex County Agricultural Society, and Tunbridge Wells Agricultural Soiety.

A communication was read from the Devon Cattle Breeders' Society, suggesting the desirability of a conference of representatives of the various Breed Societies, for the purpose of considering, and, if possible, securing a revision of the methods governing the tuberculin test of animals exported to the Argentine and other foreign countries. It was resolved that, in the event of such a meeting being convened, Messrs. H. E. Braby and J. E. Budd should represent the Sussex Herd Book Society.

The Fiscal Question.

Mr. William Graham submitted a long paper on "Topics that affect agriculture, and its interests at the present day." Alluding to organisation, he said that no industry could be so thoroughly organised as that of agriculture, "but," he added, "we allow side issues and sentimental politics to divide our ranks." With regard to the fiscal question, he said they were told by the sponsors of the "unauthorised programme" that it should be discussed without reference to prejudice or party. "Without fear or hesitation," he proceeded, "I say that the agricultural and rural interests have more to lose by the adoption of protective duties on the general importations of the country than we have to gain.

Mr. Graham, continuing, said with regard to the suggestion that a 2s. duty should be placed on wheat from foreign countries, the interests of agriculture were only being exploited for the benefit of the manufacturing industry. All economists agreed that any country was justified in imposing taxation or duties on imported produce for revenue purposes, but in order to gain revenues from import duties that duty should only be of such an amount that the importation of the specific article was in no way impeded. The prosperity of agriculture depended on the spending power of the general public, and if these classes had the prices of their everyday requirements artificially raised to an average of 10 per cent., therefore their spending power would be appreciably decreased.

Mr. Watt rose to a point of order, and said that they had not come to have a real political speech rammed down their throats.

Lord Lonsdale: I rather feel myself that Mr. Graham has carefully prepared an elaborate political speech to address us here to-day.

Mr. Savage (Lingeyclosehead): I move Mr. Graham goes on.

Mr. Moffatt seconded.

Mr. Savage: We have no political views.

Lord Lonsdale: It is a political discussion.

Mr. Graham proceeded to read his paper again, and after a time Lord Lonsdale, looking at his watch, observed that instead of occupying twenty minutes, Mr. Graham was taking forty minutes. "I must call you to time, sir," said his Lordship. "I beg to propose that this question be postponed."

Mr. Briggs (Carlisle): I second that.

Mr. Graham said that he would "skip over" some of his matter, and in conclusion made an appeal for better organisation. (Hear, hear.)

Some discussion took place as to who should continue the discussion on the paper at the next meeting, and Lord Morpeth said that he would open it.

Allotments and Small Holdings Association.

A meeting of the Executive Committee of the Allotments and Small Holdings Association was held at Birmingham on Tuesday. Mr. E. Impey, who presided, reported that Lord Carrington, in response to his communication, had written suggesting that the proposed conference respecting land law legislation should be put off till after the General Election, when he thought much good might be done.

Copies of the association's leaflets were reported to have been forwarded to the secretaries of all Liberal Associations in England and Scotland; it was also agreed to send the association's "Address to Labourers" to all the daily papers and the weekly country papers in England.

The committee considered and approved a circular prepared by the Co-operative Small Holdings Association for forwarding to Parliamentary candidates on behalf of the associations engaged in the promotion of reform in land legislation.

The Chairman pointed out the great importance of calling the attention of all those interested in reform to the obstructive course taken by the Local Government Board officials respecting the action of County Councils in the promotion of allotments.

Devon.

At the last meeting of the council of the Devon County Agricultural Association the committee on the registration of stallions reported that the examination of stallions was conducted by Professor Penberthy, of the Royal Veterinary College, from March 23 to March 29. He examined fifty-six entries, of which fifty-four passed the examination. Of these two were subsequently excluded as being unable to fulfil the necessary conditions. Nine stallions, which were exempt from veterinary examination, were also registered, making a total of sixty-one, comprising thirty-nine shires, fifteen thoroughbreds, five hackneys, and two ponies. The committee considered that the enforcement of the rule as to purity of breed prevented some eight or ten horses, which would otherwise have come forward, from being entered for examination. They were of opinion that the alteration had greatly added to the value of the scheme. In 1904 the guarantors were called upon to pay 12s. 6d. each to cover a deficit of £36, but this year the deficit was only £12, and the guarantors were asked for 4s. each. With regard to next year, the committee suggested holding examinations of stallions at fewer centres.

The report was submitted by Mr. A. Scott Browne, who said that the aim in supporting the registration of stallions was to try and get people to breed from the best possible animals.

The Chairman remarked that the County Association was immensely indebted to Mr. Scott Browne for formulating this scheme. He had not spared trouble or expense. As an acknowledgment of his services, Mr. Scott Browne was elected an honorary vice-president, as was Major Tucker, and Mr. Eve, M.P., was appointed to the vacancy on the council caused by the death of Mr. Coaker. A vote of thanks was passed to Mr. Bowden for his services to the council.

Devon Cattle Breeders.

The annual meeting of the Devon Cattle Breeders' Society was held at Exeter on the 15th inst., when Mr. A. Caple, of Wiveliscombe, was unanimously elected president.

The secretary (Mr. J. Risdon, jun.) reported a balance on the year of £65, the largest since the Society was started.

The secretary reported the receipt of several replies to his circular to the various breed societies in respect of the tuberculine test as applied to animals exported to foreign countries, in which it was mainly suggested that there should be a conference of cattle breeders to consider the question, the Shorthorn Society alone disagreeing with the suggestion.

The chairman (Mr. Kidner) said that the meeting of the Shorthorn Society at which the matter was discussed was a very small one, and the suggestion was only thrown out by a small majority. The minority were very strongly in favour of such a movement, and he was asked to persuade the Devon Society to go on with the matter and get a meeting called. He proposed that it was desirable that the various cattle breed societies of the country be organised and affiliated in a central authority, and also that each breed society be asked to send delegates, not exceeding three in number, to a meeting in London in the Shire horse week. He thought they should be in a position of being able to get cattle breed societies together at a moment's notice on a question of emergency, and that they would then be able to resist any outside action.

Mr. C. Hull seconded, and the resolution was carried.

The secretary was requested to put himself into communication with the Shire Horse Society with regard to the holding of the meeting, and it was resolved that notices be sent to the various breed societies asking them to send delegates to the meeting.

It was decided to offer similar championship prizes for Devons at the Royal Show next year as formerly.

The South Devon Herd Book secretary wrote asking the Council to support them in approaching the railway companies with the view to their providing cheap tickets (a fare and a quarter for the return journey) to and from agricultural shows. It was agreed that this was one of the matters which the proposed association should consider if appointed.

The Imperial Industries Club and Agriculture.

Mr. R. A. Yerburgh, M.P., presided at the December dinner of the Imperial Industries Club, when the subject for discussion was "Agriculture and the Nation's Wealth."

The Chairman, in opening the debate, said the subject was a most important one. Agriculture used to be considered our greatest natural industry, but we were now more a manufacturing and industrial community. We ought to bring ourselves more before the attention of the public. There was one point which they should never leave out of their minds, and is was that, no matter how valuable to the welfare of the country and to its strength the various industries apart from agriculture might be, yet the real ultimate source of the wealth and power of the nation and of our expansion as a great Imperial race rested upon a hardy and vigorous people, and that must depend upon a flourishing agriculture. (Cheers). In his opinion education and combination amongst the farmers themselves were the means to which they must look for help. On the Continent combination had enabled the farmer to obtain prosperity. It was to that and education and not to protective duties to which they must look for success. (Cheers).

Sir Walter Peace agreed that farmers would never improve their position in this country until they combined together. From a colonial point of view the United Kingdom would never be prosperous while itdepended to the extent it did to-day for food from abroad. Now, in his opinion, we had it in our power in this country to produce far more food than we did to-day. (Cheers). This country took from the soil in the cultivation of wheat alone more than five millions less per an-even if a two shilling duty were placed on imported wheat it would really be paid by the foreigner

Sir J. Gilmour hoped that the movement for combination would extend to the small farmers, and he trusted that there was a great future before agriculturists if only they stuck together.

Sir Thomas Pink spoke of the necessity for careful selection in regard to the packing and transit of fruit.

Sir Charles Owen, general manager of the London and South-Western Railway, said it was foolish to suggest that railway companies were opposed to the claims of agriculture. Why, on the contrary, the success of British railways was bound up in the success of the agriculturists of the counties through which they ran. British agriculture, if it died at all, would die of its own inertia. He had himself made endeavours to get farmers to combine, but had found it impossible to get them to do so and to send their products in bulk. Last year there had been a splendid harvest of apples, but it had been entirely lost for want of action on the part of the farmers, and the result was that American apples were being sold at sixpence a lb., while home grown apples were practically thrown away. He appealed to British farmers to organise and to educate

Sir Thomas Elliott, Secretary of the Board of Agriculture, maintained that the British farmer was the best farmer in the world, both as a farmer and a stockbreder. He was, however, an isolated individual, and he had been passing through a transitional period as to the level of profits. Parliament had not recognised the altered condition of agriculture as to taxation. The margin of profit was small, and a farmer must look to every small source of remuneration.

The Right Hon. the Earl Carrington, G.C.M.G., President of the Board of Agriculture and Fisheries, has resigned his membership of the Departmental Committee on Small Holdings, and has appointed Mr. R. C. Munro-Ferguson, M.P., to be a member of the Committee in his place.

Clydesdale Horse.

A meeting of the Council of the Clydesdale Horse Society was held in the registered office, 95, Hope Street, Glasgow, on Wednesday (Mr. Robert Brydon presiding), when the Duke of Richmond and Gordon and Colonel Smith Grant of Minmore were elected life governors of the society, whilst eight gentlemen were elected annual members. It was agreed not to frame any hard and fast rule regarding requests for amendments of descriptions after animals have been exported, but to deal with each case on its merits; and also that it was not advisable to number fillies before they had begun to breed.

The salary of the secretary for 1905 was fixed at the figure which had been promised to the secretary in 1892, but which had not been operative since 1895. Further, it was unanimously agreed that his salary from 1906 should be £175. The investment of £600 in North British Three per Cent. Consolidated Lien stock was approved of.

A committee was appointed to consider the relation of non-members to the society, and the conditions upon which animals bred by non-members should be accepted for registration. Two champion prizes of £10 each were voted to the Royal Agricultural Society for its Derby show, and two large silver medals to the Royal Ulster Society for the best stallion and the best mare owned in Ireland.

Arrangements were made for the election of councilmen, and the roll was adjusted at date as showing an increase of the membership of 28.

Glasgow.

The annual meeting of the Glasgow Agricultural Society was held at Glasgow on Wednesday, Mr. W. E. Gilmour, of Woodbank, Alexandria, presiding.

In their report the council state that they again deeply regret that the financial position of the society does not enable them to resume payment of Debenture interest. An effort has been made to induce some of the largest holders to cancel a part of their Debentures, but the appeal has met with little response. It is therefore plainly evident that if the finances of the society are to be put upon a satisfactory basis it must be done by the members themselves, who are now very strongly solicited to render the necessary monetary assistance. The council will, on an early date, convene a meeting of Debenture-holders for the purpose of discussing an arrangement whereby the payment of interest may be resumed, and in the meantime they are heartily thanked for their kind consideration towards the society.

With reference to the stallion show, the council said that the continued loyalty of the principal owners to the old annual event is most praiseworthy and encouraging, and breeders, along with the general members of the society, are earnestly desired to join with owners in upholding the influence and usefulness of the National Stallion Show. Referring to the show ground, the council state that, with the assistance of the Highland and Agricultural Society, a large wooden shed, covered with corrugated iron and all painted, has been erected. This will be available for the society next year, and will be useful either converted into eight loose-boxes or as a receptacle for implements and other property belonging to the society. The ground could not be let during the summer months to the usual tenants owing to the Highland and Agricultural Society's requirements, but every available space is let for winter months. The stabling is still vacant, but every effort is being made to secure tenants. A considerable number of stalls have been converted into loose-boxes, which will be very advantageous to the stallion show.

The society has this year placed £350 19s. 1d. to the credit of the reserve fund. This is a step in the right direction, but the accumulated funds are still far short of what they ought to be, and the society cannot be said to be in a sound financial position with such a regrettable debt due to Debenture-holders. The council are much averse to be always asking for cash assistance, but every member of the society must realise that a loyal and spontaneous offering is absolutely necessary if the society is to be saved from a humiliating position.

The Chairman, in moving the adoption of the report, said the society was not in so satisfactory a condition as it ought to be; still, they ought to be thankful that it was not worse. The sum of £350 had been placed to the reserve fund, and when he considered that the rates, feu-duties, and the wages of the caretaker at Scotstoun amounted to £450, he thought they had done fairly well. Their thanks were due to the Debenture-holders for doing without their interest. The position of the society was not one that could not be overcome. As chairman of the directors, it was his wish to make the shows a success. Unless the directors and members worked together this would never be done, as if there was not such co-operation they could not expect outsiders to take an interest in their affairs. A special effort ought to be made to popularise the Scotstoun ground. No doubt the show of the Highland and Agricultural Society would have brought the ground into public notice, but much more was required to be done in the same direction. This he thought could best be accomplished by judicious advertising—by booming, for instance, such special attractions as the leaping competition. People would come out to see an exhibition of that kind when they would not come to see cattle and sheep.

Mr. John Speirs seconded, and the motion was adopted.

Mr. Strang moved that the Marquis of Bute be appointed president and the Duke of Montrose and the Marquis of Linlithgow, vice-presidents, and the motion was adopted.

Mr. John Watson was re-appointed secretary and treasurer, and Messrs. M'Lay, M'Alister, and M'Gibbon were reappointed auditors.

Royal Lancashire.

A meeting of the council of the Royal Lancashire Agricultural Society was held at Preston, on Thursday afternoon. Mr. John White was re-elected chairman for the year, and took the chair amid loud applause. Mr. Windham E. Hale was appointed vice-chairman and Mr. Philip Park deputy vice-chairman.

Mr. Webster stated that he had visited the site for the next show at Scale Hall, between Lancaster and Morecambe, and found it a magnificent one. No matter how hard it rained, he did not think the field would be wet.

MOLASSINE MEAL FOR CATTLE.

Infringement of Patent.

The case of the Molassine Meal Co., Ltd., 36, Mark Lane, London, E.C., v. R. Townsend and Co., Ltd., Stroud, Glos., was recently heard in the Court of Justice, Chancery Division, before Mr. Justice Warrington.

Mr. Fletcher Moulton, K.C., M.P., Mr. G. Cave, K.C., and Mr. H. A. Colefax represented the plaintiffs; Mr. A. J. Walter and Mr J. Hunter Gray appeared for the defendants.

Mr. Fletcher Moulton stated what the Patent consisted of, pointing out its great commercial utility, which he "thought would be proved beyond controversy. It is utility on a great scale. It is for a new cattle food, composed of molasses and peat. Molasses, as practical witnesses would prove, cannot be used for food, except, at all events, in very small quantities. Molasses and peat together form an admirable food."

Mr. Fletcher Moulton further explained the process of sugar manufacture, and why the combination of molasses and peat had such inherent properties as to form a scientific discovery, and as such, was entitled to be protected by Letters Patent.

The first witness called was Mr. Frederick Livingstone, the Managing Director of the Plaintiff Company, who gave evidence as to the remarkable progress of the Molassine Meal Company, Limited's, business, showing its rapid development from its inception in 1900 to a large commercial undertaking in 1905.

Mr. Otto Hehner, the next witness, said that he was past president of the Society of Public Analysts, late Chairman of the London Section of the Society of Chemical Industry, and Public Analyst and District Agricultural Analyst of various counties.

The witness, in reply to questions, said he had had considerable experience of the various feeding stuffs in use for horses, cows, and so forth.

He stated that he had analysed sample of the Molass Feed manufactured by the defendants, and there was no doubt that it contained peat moss and molasses.

Mr. Colefax.—Is it true that molasses contain a considerable quantity of potash salts?

Witness.—Yes, a very large proportion.

The witness was subjected to a long cross-examination, and proved that the humic acid in the moss had a neutralising action on the potash salts in the molasses, so that they formed a compound which had no detrimental action on the animal organism.

Mr. Otto Hehner said that he had approached the matter with a considerable amount of doubt on first reading the patent, but from the large number of experiments he had made he was perfectly certain that the humic acids had a direct and preventive action on the potash salts that are contained in the molasses.

Q. In the actual manufacture of this Molassine, there is a liberation of acetic acid?

A. I have not seen it manufactured, but I should think there must be.

Q.—I mean from your experiments.

A.—I recovered the molasses which I had mixed with the peat, and I compared it with the original molasses. They had a decentish taste, not particularly pleasant, but a good deal better than the original. The odour was far better, and the colour was right.

Mr. Justice Warrington.—This is molasses after being mixed with peat moss, is it?

A.—Yes, after being mixed with the peat moss and extracted. There was an undoubted improvement in the molasses.

Q.—The whole of this goes to show that lines 10 and 12 in the Specification are true?

A.—Yes, they are true.

Mr. Colefax.—I will not go further than that, but, as a matter of fact, I think you have other experiments tending in the same direction to show the truth of that?

A.—Yes.

Q.—What I want to say now is this: We have been speaking of the action which ensues apparently, between the humic acid in peat and the potash salts and the organic acids in the molasses. Would you, in your own words, say what you think the action is that is taking place between the peat and the molasses?

A.—I think there is a three fold action. Peat moss neutralises any alkalinity that may be, and mostly is, present in molasses in the sense that improves it; secondly, it decomposes organic salts, and when the acids of these organic salts are volatile, part of them is removed from the molasses; and thirdly, the peat moss does render insoluble in some way or other, whether it be chemical or entirely mechanical, a portion of otherwise chemical salts.

Mr. Justice Warrington.—Those salts, rendered insoluble, do not get into the animal's system?

A.—I am not sure. They taste no more. Whether they afterwards become liberated in the digestive tracts I do not know.

Mr. Colefax.—We propose to call evidence on this question of how it works physiologically.

Mr. Edward Tate was next called. In answer to Mr. Colefax, he said he was vice-chairman of Henry Tate and Sons, Limited, the well-known sugar refiners, of London and Liverpool. He explained that before 1900 a very small proportion of the molasses was used as a food for cattle, but at the present time they sold over three-fourths of their entire output to be used in the manufacture of Molassine Meal.

In reply to questions as to the kind of peat moss that was used, Mr. Tate remarked that he did not know anything of peat moss generally, but he could only speak of the fine sort which was delivered to them and which was called Sprugnum.

Dr. Ad. Liebmann, M.A., Ph.D., was then called by Mr. Colefax.

Q.—I do not think I need go over your qualifications, as you are such a well-known chemist. You have read this specification that the plaintiffs rely on in this case?

A.—I have.

Q.—And I believe you have made extensive experiments in relation to questions of fact that may arise in connection with the plaintiffs' invention?

A.—I have.

Q.—Fore the purpose of this case?

A.—Yes.

He said he also had analysed the Molass Feed manufactured by the defendants, and his evidence confirmed that given by Mr. Otto Hehner.

Witness said that the organic acids contained in peat, in particular humic acids, had a neutralising action on the potash salts of molasses, converting them into a compound that had no detrimental action on the animal organism. He said he had made many and repeated experiments.

This witness was cross-examined at length on the methods he employed for analysing the peat moss and molasses.

Mr. Trevor Farmer Spencer, M.R.C.V.S., Veterinary Inspector to the Board of Agriculture, and to the Northampton County Council, gave evidence that he had fed animals with Molassine Meal since 1902.

He had specially used it beneficially on an animal that had suffered pedriodically from a bad attack of indigestion with colic and bowel obstruction, which illness left the animal in a very weak and emaciated condition and rendered him useless for work for weeks together.

Q.—Did you first try some other kind of treatment?

A.—Yes, I tried every treatment I knew on him before I gave him the Meal.

Q.—Without success, so far?

A.—It took a long time. It took weeks, even months.

Mr. Justice Warrington.—Do you mean with the Molassine, or with the other treatment?

A. With the other treatment.

Mr. Cave.—Did you ultimately try the Molassine Meal?

A.—I gave him Molassine Meal.

Q.—What was the effect?

A.—He rapidly regained his flesh, and since the time of his illness, three years ago, he has not again suffered from colic or bowel obstruc-

tion, and he has remained in a most satisfactory state, and has been able to do his work ever since.

Q. -Before this time had you used sugar or molasses to give to animals?

A. —I had used molasses.

Q.—Was there any drawback to molasses as a food?

A.—Yes. The great drawback is that you cannot give a sufficient quantity of the molasses to get the fattening benefit of it as a food. You cannot give a sufficiently large quantity without causing a laxative condition of the bowels.

Q.—Can you say about how much was the limit you could give of your molasses?

A.—Of course, it would rather depend on whether the animal was resting or working, but say ½lb. to a maximum of 1lb. A pound would be too much to give an animal in work.

Re-examined by Mr. Cave.—Witness said he did not only give it to one horse, but to many, and that he had used it largely and always with good effect for years.

Mr. A. H. Jacobs, M.R.C.V.S., next gave evidence. He said he had had considerable experience in the treatmnt of horses, more especially in connection with large firms in London, and that he had used Molassine Meal in his practice for about four years. He found that by its use digestion was assisted, and that in one yard, where he had a good many colicky horses, he had very few cases of colic since using it.

He also remarked that when using Molassine Meal for horses with worms it expelled any they might have.

In reply to a question as to whether he had used molasses, he said he had done so before the introduction of Molassine Meal, but he could only give it in very small quantities, not more than two to four ounces at a feed, whereas he was now giving 4lb. of Molassine Meal daily.

Mr. John McLauchlan Young was next sworn and examined by Mr. Fletcher Moulton.

Q.—You are a Fellow of the Royal College of Veterinary Surgeons, a Fellow of the Royal Society of Edinburgh, and of the Royal Physical Society, and a variety of other societies, and you are a Lecturer on Physical Science in the Aberdeen University?

A.—Yes.

Q.—Have you during the last year been conducting experiments with Molassine Meal?

A.—I have.

Q.—You have been feeding cattle, pigs, horses, and dairy cows?

A.—Yes.

Q.—Have the results been satisfactory?

A.—Highly satisfactory.

Q.—Now just let me take pigs. What do you say with regard to the weight of pigs?

A.—We had pigs fed on the ordinary food and another lot fed on the ordinary food plus Molassine, and although the weights did not differ very much alive or dead, the percentage of bulk was much higher in the pigs fed with Molassine Meal than in the others.

Q.—That referred chiefly to their weight. Now, what do you say as to cows?

A.—I selected some cows and had them fed without the Meal, and I had the milk analysed on various occasions, every third day, and the cow receiving the Molassine Meal gave milk with a larger percentage of fat in it; the percentage of fat in the milk rose to an unusual height.

Q.—With regard to the quantities that you can administer, how far would you go?

A.—I have given 6lb. to two bullocks, but not continuously. In the experimental animals eight of them received, commencing at 1lb., up to 4lb., and for a considerable period towards the end of the experiments they were receiving 4lb. each per day.

Q.—Would it be possible with treacle in its ordinary form, otherwise than in Molassine Meal?

A.—Impossible.

Q.—What is the result of giving molasses in such quantities directly, and not in the form of Molassine Meal?

A.—I never used such quantities except medicinally, and in giving such quantities you induce purgation.

Q.—Do you find that the animals get tired of this?

A. Not of the Meal.

Q. Those are the results of experiments actually made by you for the purpose of ascertaining the effect of this Molassine Meal?

A.—Yes.

Q. Was that for the purpose of this trial at all?

A.—Not at all.

Witness was cross-examined at length by Mr. Walter.

At this stage defendant's counsel said he had been considering this question with his clients, and it was perfectly clear that they could not any longer contest the validity of this patent.

Mr. Fletcher Moulton, on behalf of the plaintiffs, said that as they did not want to be arbitrary, they would forego the question of damages, as the learned counsel for the defendants had stated that they had not sold much.

The Court adjourned at 1.30, and at 2 o'clock Mr. Justice Warrington gave judgment.

He said that before the date of this patent it was well known that molasses, in consequence of the presence of potash salts, could not be used as a food for animals in sufficient quantities without evil effects, and that the patent had partially succeeded in getting rid of or converting the potash salts into some other non-deleterious substance.

In his opinion, having heard the chemical evidence of the plaintiffs and the cross-examination on it, he was satisfied that the statement was in substance true that the peat had a chemical effect upon the molasses which prevented it from being detrimental to the animal organism as it was before.

The learned Judge found that the combination of molasses and peat moss was subject matter for a patent, and that the invention had not been anticipated.

His Lordship continued: Then the last defence which I need deal with is the objection that the patent is not useful. That has been, I think, abundantly disproved by the veterinary evidence I have heard this morning. The result of that evidence is, that previous to 1900, when this patent came into extensive use, experience had shown that not more than 1lb. a day at the outside of molasses could be given to a horse —I am taking a horse as the example that is given to me—but that since this patent it is possible and advantageous to give a horse as much Molassine Meal as would cause him to eat 3lb. of molasses, and that therefore the nutritious properties of the molasses may be made use of to the extent of three times as much as that in which they could be used before.

Then, I have the further evidence of Mr. Young, who has made experiments, not for the purposes of this trial, with various animals in Scotland during the last year, and the result of those experiments is, that the food so compounded of molasses and peat is very valuable as a nutritious food.

This being so, I cannot hesitate to find that the patent is useful, and the result is, that there must be the injunction asked for, and as the statement of what appears to have been sold appears to have been very small, the plaintiffs do not think it worth while to ask for any damages, and there will be an injunction and costs of the action.

Mr. Fletcher Moulton.—And a certificate that we have proved our breaches?

Mr. Justice Warrington.—Yes, that you have proved your breaches, and that the validity came in question.

Mr. Fletcher Moulton.—If your Lordship pleases.

Contagious Diseases of Animals.

Summary of Returns issued by the Board of Agriculture for the week ending Dec. 16, 1905:—

PUBLICATIONS RECEIVED.

"Who's Who for 1906" has come to hand, and the first thing that occurred to us was how large will it be in a few years' time? The new edition is larger than any that has preceded it, despite the fact that several tables and other matter which at one time appeared in it have been transferred to "Who's Who Year Book." On the other hand, new and interesting additions have been made to the parent book, hence the increase. Among the new features is the addition to many of the biographies, of details as to the size of the man's family, his telephone or motor number, telegraphic address, etc. Thus each year sees an increase in the value of what has come to be rightly recognised as the guide as to who's who, and indispensable handbook. It is published by Messrs. A. and C. Black, Soho Square; price, 7s. 6d. net.

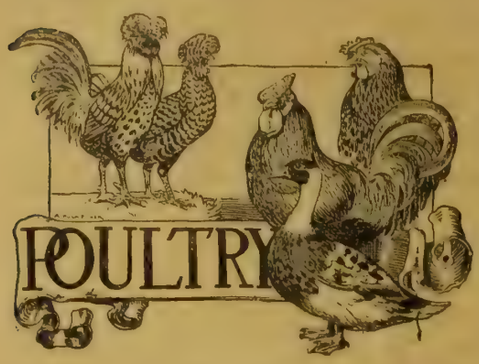
"Who's Who Year Book for 1906" is made up of the tables which were formerly such a popular feature in "Who's Who" itself, and has been issued in response to numerous suggestions and requests. It is devoted widely to tabular matter, and from it can be found at a glance details of any particular minister, ambassador, church, club, society, theatre, race meeting, or newspaper, besides other items of interest. It is published at 1s. net, by Messrs. Black, as above.

A second edition has recently been issued of "Surgical Diseases of the Dog and Cat," by Professor F. Hobday. This is a text book containing directions with regard to surgical operations upon canine and feline patients, which has proved of the greatest value to students engaged in the daily work of the clinique for small animals, and is also appreciated by the busy practitioner, for it supplies the details in as concise a manner as possible. The second edition has long been called for, and only the illness of the author has prevented its publication. The new edition has been enlarged to include symptoms and general details of treatment other than that which may be described as purely surgical, but the original idea of the author to keep the book as a handy manual for the final year student has been adhered to. The work, which is profusely illustrated, is published at 10s. 6d. net by Messrs. Baillière, Tindall and Cox, 8, Henrietta Street, Covent Garden, W.C.

"Elementary Forestry," by Charles E. Curtis, will be welcomed by all students of forestry—and their numbers are increasing every year. The book deals with the subject, as its title indicates, in an elementary manner, and is yet a complete work, so that the student will be able to follow the writer from beginning to end, and after careful perusal of the work should have considerably augmented his knowledge of forestry. Mr. Curtis deals interestingly with his subject, and the work is one that can be recommended. It is published at 6s. by the "Estates Gazette," 6, St. Bride Street, London, E.C.

"The Agricultural Handbook and Diary" for 1906 is, like that of other years, chiefly taken up with the diary arrangements, monthly account rulings, etc., but there is some interesting reading, the articles including a review of the agricultural year, by W. E. Bear; "Twenty Years of British Farming," by Rowland E. Prothero; "The Village Community at Winterslow," by Lady Wilson; "The Burden of Rates on Agricultural Land," by Sir E. Strachey; "Progress of Co-operation Among Agriculturists," by Mr. R. A. Yerburgh, M.P., etc. There are also several statistics of service to those for whom the book is intended. It is published at 1s. by "The County Gentleman," 4 and 5, Dean Street, London, W.C.

"The Farmer and Stockbreeder Year Book" for 1906, is very much like its predecessors. While pedigree is undoubtedly the key-note of the volume, the interests of agriculture and stockbreeding generally have been kept well to the front. With regard to the general contributions, the volume opens with an interview and a full-page portrait of the popular owner of Rolleston, Sir Oswald Mosley, who explains his views on Shorthorn and Shire Horse breeding. One of the most important articles in the volume is that by Lord Arthur Cecil, who deals with "Pony Type in the Mountain and Moorland Breeds." It is an able exposition of a very difficult subject, and as Lord Arthur Cecil is the recognised authority on hill and moorland ponies, his views on the matter may be regarded as final. The article is well illustrated with a series of photographs from paintings and from life. There are numerous other articles, covering a goodly range of subjects, in addition to the usual sale records, whilst tables and numerous illustrations make up a bulky volume. The price is 1s., and it is published by the "Farmer and Stockbreeder," 6, Essex Street, Strand.



Experiments in Poultry Feeding.

An extremely interesting report on poultry experiments conducted in Cornwall, August, 1903-4, under the auspices of the Cornwall County Council, has been issued, price sixpence, and to the poultry breeder it gives some most useful information on a variety of subjects affecting poultry. To enumerate a few would take a goodly bit of our valuable space, and many are worthy of wider publicity, notably that dealing with experiments with foods, from which we take the following:—

It frequently happens that experiments conducted, possibly with scrupulous care, are misleading rather than otherwise, seeing that all the varying conditions are not taken into consideration; consequently, in view of the importance of feeding to every poultry keeper, the more interesting of our experiments of 1902 have been continued in 1903 and 1904.

The experiments of 1903 were conducted with Silver Wyandotte hens one year old, the same fowls being kept for the 1904 experiments. In other pens pullets were, as will be shown later, fed on two of the principal foods. It will be seen, therefore, that these experiments with wheat, oats, and maize have been continued for four years with fowls of different ages, different breeds, and under entirely different conditions. If under such varied tests one uniform result has been obtained, it needs little introspective power to see that a fact of permanent value to the industry has been established.

Both barley alone and white oats alone have given most unsatisfactory results in these experiments, but wheat and maize have been close competitors with each other, a mixture of half oats and half maize being far superior to either. To settle once for all the relative merits of these foods a somewhat extended series of experiments was designed.

In the experiments of 1902 the pullets were confined, and so were the one-year-old hens. The following table gives the results obtained with hens, it showing the number of eggs laid monthly by each pen of four one year old Silver Wyandotte hens from January 1 to December 31, 1903:

Food.		January.	February.	March.	April.	May.	June.	July.	August.	September.	October.	November.	December.	Total number laid in 1903.	Total number laid in 1904.	Total number laid in 1903 and 1904.
½ Maize ½ Oats	1903	19	00	97	64	78	38	34	35	10				441		717
	1904		17	38	55	32	41	30	16	29	18				276	
Wheat	1903	22	35	62	69	61	43	32	44	14				382		579
	1904			37	24	3	39	31	22	6					197	
Maize	1903	19	17	74	63	59	37	40	08	17				391		603
	1904			37	76	34	29	33							209	

½ Maize ½ White Oats	62·5
Maize	53·0
Wheat ...	58·5

experiments extending over two seasons, it is not too much to state that, coupled with facts already referred to, it furnishes us with some of the most important and reliable data contained in this report. Not only does it confirm the results of previous experiments regarding the superiority of half maize and half white oats as a food for laying hens, but it drives home the lesson that has throughout these experiments been impressing itself upon us, namely, that maize is a good egg producer.

Effect of Foods on Decrease of Fecundity.

A rather interesting question in an experiment of this character is the relative decrease of fecundity of the fowls fed on the different foods. If, for example, a food is not only giving better results in a given season, but is establishing a reserve for the future superior to that laid up by competing foods, it has special claims on our attention. An examination of the figures shows that half maize and half oats has done this; the information already referred to is, therefore, buttressed by this further fact, as is shown by the following figures:—

Percentage of total of eggs laid in 1903 laid by the same fowls in 1904: Half maize and half white oats, 62.5; maize, 53.0; wheat, 51.5.

It will be seen, therefore, that while there was a falling off of only about 37 per cent. in the number of eggs laid by the pen fed on the mixture in 1904 as compared with 1903, the maize pen dropped 47 per cent. and wheat 48 per cent. Obviously, then, it is tolerably clear that this mixture of equal weights of maize and oats has much to recommend it.

Wheat versus Maize Fed to Pullets with free Range.

There is yet another point relating to the relative value of wheat and maize as poultry foods, upon which expert poultry-keepers hold strong and varied opinions. It has been urged by the advocates of maize that fed to young fowls under confinement, as in our experiments, justice is in no way done to its merits. Maize, it is contended, with a nutritive ratio of about 8.3, cannot possibly show to the best advantage except when fed to fowls having free range, as the dual benefits of abundant exercise and access to worms and insect life generally, are just the elements needed to leave maize in unquestioned superiority to wheat with its nutritive ratio of 5.6.

There is probably something in the theory, and the Committee, acting on the principle that it is essential to collect information on all clearly defined issues, decided to feed two pens of pullets of different breeds on wheat and maize respectively, and give each free-range on pastures. The following table gives the results. It shows the number of eggs laid monthly by two pens of four pullets each, between January 1 and December 31, 1903:

	No. of Eggs. Devon Wheat.	No. of Eggs. Devon Maize.
January	22	24
February	78	74
March	73	84
April	77	66
May	73	85
June	59	61
July	75	65
August	51	41
September ...	26	24
October	2	3
November... ...	—	9
December... ...	—	15
Total	539	544

The uniformity of these results is truly remarkable. Year after year these foods have been tested against each other with fowls of different ages, different breeds, and under totally different conditions, and in every instance the difference in the number of eggs laid has been of a most trifling character.

Profit and Loss affected by Foods.

To leave this question here would be to do but scant justice to the claims of either maize alone or a mixture of half maize and half oats. These experiments have now been in progress for nearly five years. Numberless points of interest have impressed themselves upon us during that time, but nothing has done so more uniformly than this point as to the value of maize in a poultry ration. If this were an accepted fact and theoretical teaching harmonised with it, the matter might well rest here, but so much is said in condemnation of this particular food that every available fact regarding both its strength and weakness should be brought out.

So far as we have gone the effect of maize as an egg producer only has been treated, but profit or loss is of far more practical moment. This aspect of the question has been given particular attention to in our experiments, and to insure accuracy appliances have been produced for weighing the food of each separate pen of fowls. Consequently, with reasonable care, mistakes are next to impossible.

The food has been weighed monthly, but the variations are trifling, and it will be sufficient to give the total weight consumed. As greater accuracy of result respecting the weight of foods will inevitably be obtained with fowls in runs, rather than with free range, the figures of 1903 only are dealt with below.

The following table shows the number of eggs laid by each pen of four Silver Wyandotte hens, with market value, weight of grain, cost of grain, and profit or loss:—

Food.	Number of eggs laid.	Value of eggs. £ s. d.	Weight of food. lbs.	Cost of food. £ s. d.	s. d.	Profit. £ s. d.
Maize, White Oats	441	1 12 2	402	1 2 0½	10 1½	
Maize	391	1 8 8½	360	0 18 6½	10 3	
Wheat	382	1 7 10½	401	1 3 7	4 3½	

It will be noted that the profit in this particular experiment is small, the folly of keeping old hens being thereby brought out, but the lesson respecting the value of the different foods is unmistakable. If instead of the figures of Table XIX., relating to hens, those of XVIII., relating to pullets, could be substituted, the profit would be very much greater. But, as has already been explained, the results from fowls in pens (regarding weight of grain consumed) are more reliable than with fowls given free range, and it will be well to adhere to them. If, however, for the purpose of comparison, we assume that the pullets with free range consumed the same weight of grain per pen as the hens, which is doubtless approximately correct, the profit on the maize pen rises from 10s. 3d. to £1 0s. 9½d., and on the wheat pen from 4s. 3½d. to 15s. 8d.

It will be seen, then, that these experiments, which have been carried out under the most varied conditions, with pullets, hens, fowls confined and fowls with free range, convey the same lesson in every case. Irregularities in tables there always will be, where work of this kind is carried on, but the broad facts conveyed is that much of the prejudice against maize has no legitimate foundation, and the sooner the current teaching on this point gives place to something more in harmony with facts the better it will be for the poultry industry. That maize should be used with judgment, and as a mixed food, is clear, but to condemn it altogether as a poultry food is neither wise nor in the interest of the poultry keeper.

Curiously, while the experiments with maize in our poultry pens have been in progress, others have been conducting concurrently on our experimental pastures and arable land with the same feeding stuff fed to sheep. The gulf dividing poultry from sheep is a wide one, but it is a curious fact that in both cases the results with maize are contrary to accepted opinion.

White oats are indispensable in compounding a profitable food, as is shown by our first table, as well as by tables of previous reports. With a nutritive ratio of 6.0 it is an exceedingly healthy, flesh-forming food. For breeding stock it has much to recommend it, and in this respect it will always compare favourably with such foods as maize, the latter having the wide ratio of 8.3. But from the standpoint of profit, which we are now considering, oats must be mixed with maize to be used profitably for laying poultry. In 1902, fed alone, it left a profit less than one-third of the profit obtained when used as a mixed food, and there is nothing in our more recent experiments to show that this was other than an average result.

Wheat has left a substantial profit year after year, whether fed alone or as a mixed food. Farmers using it as "afters" or damaged grain, may generally do so profitably, but those who have to purchase their poultry food may purchase plump white oats and small round maize to greater advantage.

Barley, as an egg producer, is the least profitable of our cereals. With a nutritive ratio of 7.7, it is surprising that even when no reduction is made for labour the profit with this grain is extremely slender.

Utility Poultry Club's Plymouth Exhibition.

During the concluding portion of this show the working incubators were judged. On the day preceding the opening of the exhibition the judge was present when the incubators were started. Every egg was branded, and the room engaged by the exhibition authorities has been kept under lock and key, nobody being allowed to enter without the commissionaire being present.

Messrs. E. Tripe and Co., Limited, of Harmondsworth, carried off both gold medals and a silver one, the fifty-egg incubator hatching 26 out of 30 fertile eggs, viz., 86 per cent; the two 100-egg size machines hatching 37 out of 40, viz., 92 per cent., and 50 out of 58, viz., 86 per cent. Considering the time of year the performances are very creditable, and the winners can be congratulated on the success of their great enterprise. The other competitor was unfortunate with his eggs, only five proving fertile, and these failed to hatch.

The total number of visitors to the exhibition during the week of the utility poultry show was over 20,000, and great interest was manifested in the exhibits. In the words of the *Western Daily Mercury*, "The introduction of the poultry section is likely to have far-reaching and beneficial results. It was hoped it would prove of educational value, and the hope seems likely to be fulfilled."

Sheep-Worrying at Gravesend. — During the past fortnight no fewer than twenty-six sheep have been found mutilated on the farms within a radius of two miles round Gravesend. In nearly every case the ears have been torn off and the muzzles badly mangled. The damage is believed to be the work of a collie, though some attribute it to a fox, and bands of volunteers, armed with guns, have been co-operating with the police in keeping watch in the neighbourhood of the folds. In view of the near approach of the lambing season it is to be hoped that the marauder will soon be captured.

Farm Machinery and Implements.

FOR FARMERS, AGENTS, AND DEALERS.

OILS, LUBRICANTS, AND ENGINEERS' STORES.

A LESSON FROM AUSTRALIA—THE STRIPPER-HARVESTER.

It is natural, in a country like the Commonwealth, in which such a large proportion of the inhabitants are employed in agriculture, that the manufacture of agricultural implements should become an important local industry, despite the difficulties occasioned by labour restrictions and keen outside competition. The development of Australian agricultural resources, especially wheat cultivation, was considerably hindered in the early days by the unsuitability of most of the implements and machinery imported. It was extremely difficult to make British manufacturers, for instance, understand that the conditions of cultivation in Australia and the United Kingdom were not nearly the same. This led to endeavours on the part of more than one Australian agricultural implement manufacturer to devise something specially adapted to the requirements of Australian farmers, with the result of the invention of the stripper-harvester, which is the most complete and efficient appliance of its kind yet devised.

According to Mr. H. V. McKay, who possesses extensive works at Ballarat, Victoria, and also near Melbourne, in his evidence before a Federal Royal Commission, the first stripper-harvester was invented by a South Australian farmer about 1843. It then consisted of a box on a pair of travelling wheels, a comb in front, and a set of beaters driven by gear; a separate machine, called a winnower, being used to clean the grain. During subsequent years various improvements were effected, and in 1879 the South Australian Government offered a premium of £4,000 for the invention of a machine which would complete the whole work of harvesting in one operation—this is, a machine that would do the work now performed by the present Australian stripper-harvester. There were a large number of competitors, but, as none were successful, only a small portion of the prize money was awarded, and it was not until 1884 that the first successful efforts were made to bring out an efficient apparatus. But serious prejudices had to be contended with at the outset. Many machinery makers were extremely sceptical as to the possibility of making a machine on the stripper principle that would begin and finish the work of harvesting in one operation. This made it difficult to find a manufacturer willing to take up the matter.

However, after thirteen years of arduous and rather disappointing work, the stripper-harvester became a practical success, and at the time the Commonwealth was established its efficiency and merits were everywhere recognised. Mr. McKay states that it is now an accepted proposition in Australia that wherever there is a farm that cultivates wheat or other cereals, in any considerable area, a stripper-harvester should be used thereon. Its adoption has literally revolutionised the old methods of harvesting, not only saving millions of pounds sterling to Australian farmers, but likely to save many millions more, as the benefits resulting from its introduction will be perpetual. During the recent harvest alone the Australian farmers saved about £500,000 in the cost of garnering their crops, as shown by available figures.

The stripper-harvester is now manufactured in Victoria, South Australia, and New South Wales, about twenty-seven firms being engaged in the business, the pride of place being occupied by Mr. McKay, who, as mentioned above, possesses extensive works at Ballarat, and at Braybrook, near Melbourne, from whence stripper-harvesters are also exported to the Argentine, Algiers, Tunis, Cape Colony, Orange River Colony, Natal, the Transvaal, and Chili, showing that the enjoyment of the fruits of Australian ingenuity and enterprise are not confined to the lands of the Commonwealth. The machine has also found its way to Southern Europe, and when its advantages become known it will doubtless come into general vogue there.

THE DUST NUISANCE.

The Automobile Club has already done a great deal to try and solve the intolerable dust nuisance associated with motor-cars, and they now propose to make a further grant of £100 towards experimental work in dust abatement. It will be remembered that the trials carried out by the club at the Crystal Palace two years ago entirely disproved many of the theories regarding the dust nuisance, but few new principles were established, though much useful information was deduced. The investigations have since been continued, and it has been demonstrated that a car fairly high from the ground, with rather more clearance at the back than the front, and with the under surface fairly smooth and crown-shaped, and devoid of obtrusive angles, furnishes the best conditions. A few modern cars do comply with these conditions with quite remarkable results in regard to the small amount of dust raised, and doubtless the matter will receive increasing attention from manufacturers. But however efficacious an improved design may be towards eliminating the nuisance it can apply only to cars yet to be built.

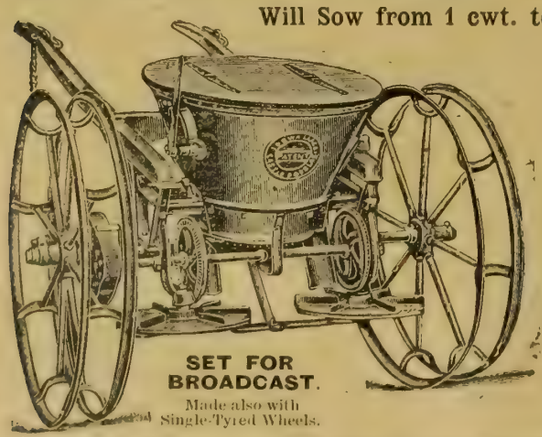
What is needed is a remedy for transgressors already running. One of the devices from which much is hoped consists of a horizontal slotted plate about six inches off the ground, so fixed that the tyre runs in the slot, the dust feather being intercepted by the unslotted portion of the plate behind the wheel, thus keeping the dust from rising high enough to be disturbed by the eddies which the car body forms in the air. On this point, however, the experiments are not completed. One fact demonstrated by the experiments is that side slipping devices attached to tyres, instead of accentuating the dust nuisance, as was expected, have quite a contrary effect.

It was not until the middle of the seventeeth century that the rude plough of antiquity was improved in any important particular. The first to make an iron plough in England was a Suffolk blacksmith named Brand. In 1785 Ransome first tempered, and in 1803 first chilled the ploughshare, and about the same period Simpson, of Cretingham, invented the slade. Following Simpson's lead, Ransome, in 1808, patented a plough-body which could be taken to pieces and its parts replaced by the ploughman in the field. Since that time no radical changes have been made in the principles governing the construction of ploughs.

The first seed-sowing machine of which any record exists was invented by Joseph Locatecli, of Carinthia, and not only appears to have been successfully tried in 1662, but made in some numbers, and even exported to England, where an agent for its sale was appointed. Cooke's drill, patented in 1873, was, however, the foundation of all the drills now in use, and the immediate predecessor of Salmon's "Bedfordshire" and Smyth's "Suffolk" drill, introduced about 1800.

Every operation in the routine of farm work is made more difficult and more inefficient by tools and implements that are not kept in the best of condition for the purposes they are to serve. It is not an uncommon sight to see a man working himself and his horses into a lather of perspiration in even such a simple operation as scarifying weeds, and after all his toil leaving the land in but little better condition than when he started, all because it has not occurred to him to be worth while sharpening the tines of the implement, or perhaps replacing them by a set more suitable for the particular class of work in hand. Or you may see a man tearing the hearts out of his horses in the effort to turn under a tangle of weeds with a low-breasted plough that gets choked every few minutes, when he would save pounds' worth of time and a great deal of trouble by using an inexpensive high-beamed plough that has been specially made to work freely in dirty land.

PATENT UNIVERSAL DISTRIBUTOR.



Will Sow from 1 cwt. to over a Ton per Acre without changing Wheels.

EASILY OPERATED.
THE FEED IS FAULTLESSLY REGULAR.
The Distribution is Perfect. Easily Drawn.

SET FOR BROADCAST.
Made also with Single-Tyred Wheels.

This Machine will distribute Grain, Ground Lime, Basic Slag, Superphosphate, Ground Bones, Guano, Soot, Nitrate of Soda, Sulphate of Ammonia, Kainit, &c., without any possibility of clogging or choking, from 10 feet to 15 feet wide according to material.

IMPORTANT.—The distinguishing features of this Machine are:—Patented combination of revolving bottom and overhanging Star Wheel; Patented Discs, with Delivery Blades at varying angles without which an even distribution cannot be made.

J. & R. WALLACE,
Foundry, CASTLE DOUGLAS.
